Your barangay. One complete financial journey.

Barangay Financial Management System by ODC · Visual user handbook · 31 October 2026

BFMS / FIELD GUIDE

From the first sign-in to the final report.

Follow the money, see who handles each step, and find the exact screen or button to use.

The access rule to know first

Super admins prepare and submit financial records. **Assigned Approvers can approve/reject; assigned Treasurers can record payments.** Administrators manage staff. Other staff actions remain limited to viewing. Super admin self-approvals are audited.

Open map →

01 / Understand the journey

Start with the process map and access matrices.

Open walkthroughs →

02 / Follow a task

Follow actual screens with numbered steps for setup, spending, revenue and reports.

Open role guides →

03 / Find your role

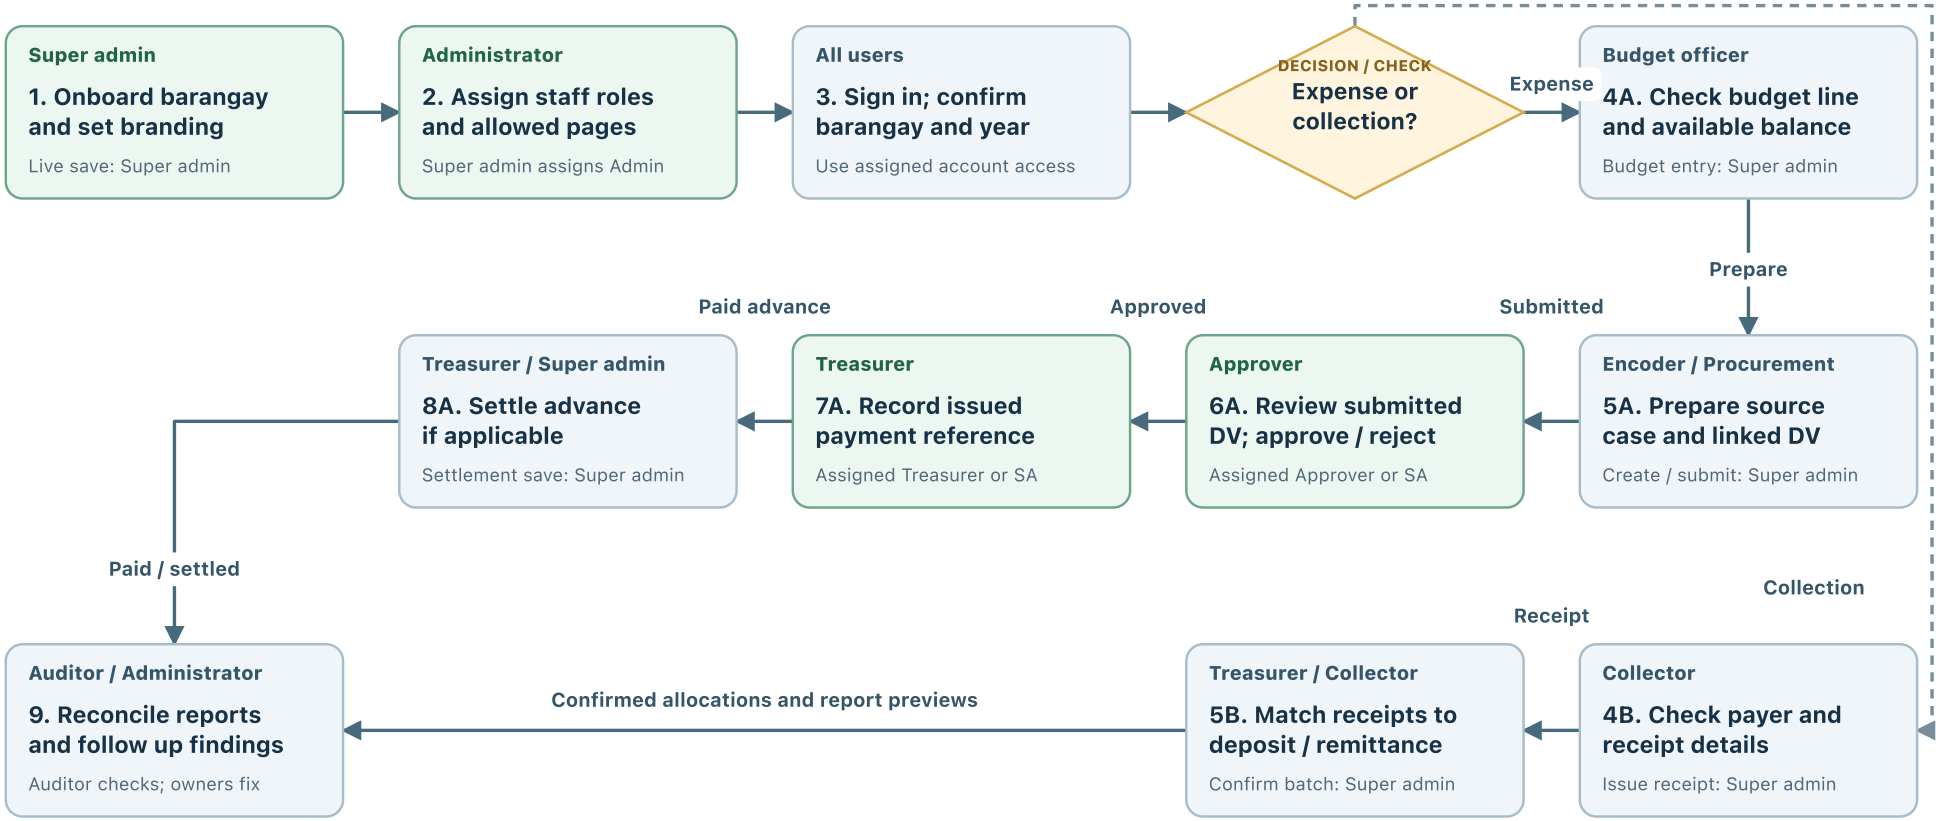

Follow your role's six steps, screen links and next-owner handoff.

This handbook describes the checked-out source, including the account page access migration. It does not confirm which migrations are installed in your connected deployment. The illustrated walkthroughs use actual demo screens. All names, amounts and references are training examples.

The whole system: roles, actions and handoffs.

Start at 1. Complete setup, follow the spending or collection branch, then reconcile the resulting records. Each box names the responsible role and who saves in the current live app.

Setup and access → Spending → Procurement → Travel advances → Collections → Reports and oversight →

Follow numbered boxes and arrowheads. Solid arrow = next step; dashed arrow = handoff or retry; red branch = resolve before continuing. Open the diagram to zoom or use its role links.

Live action by the named authorized role · Review / coordinate; read the save line · Decision or check, as described in the notes

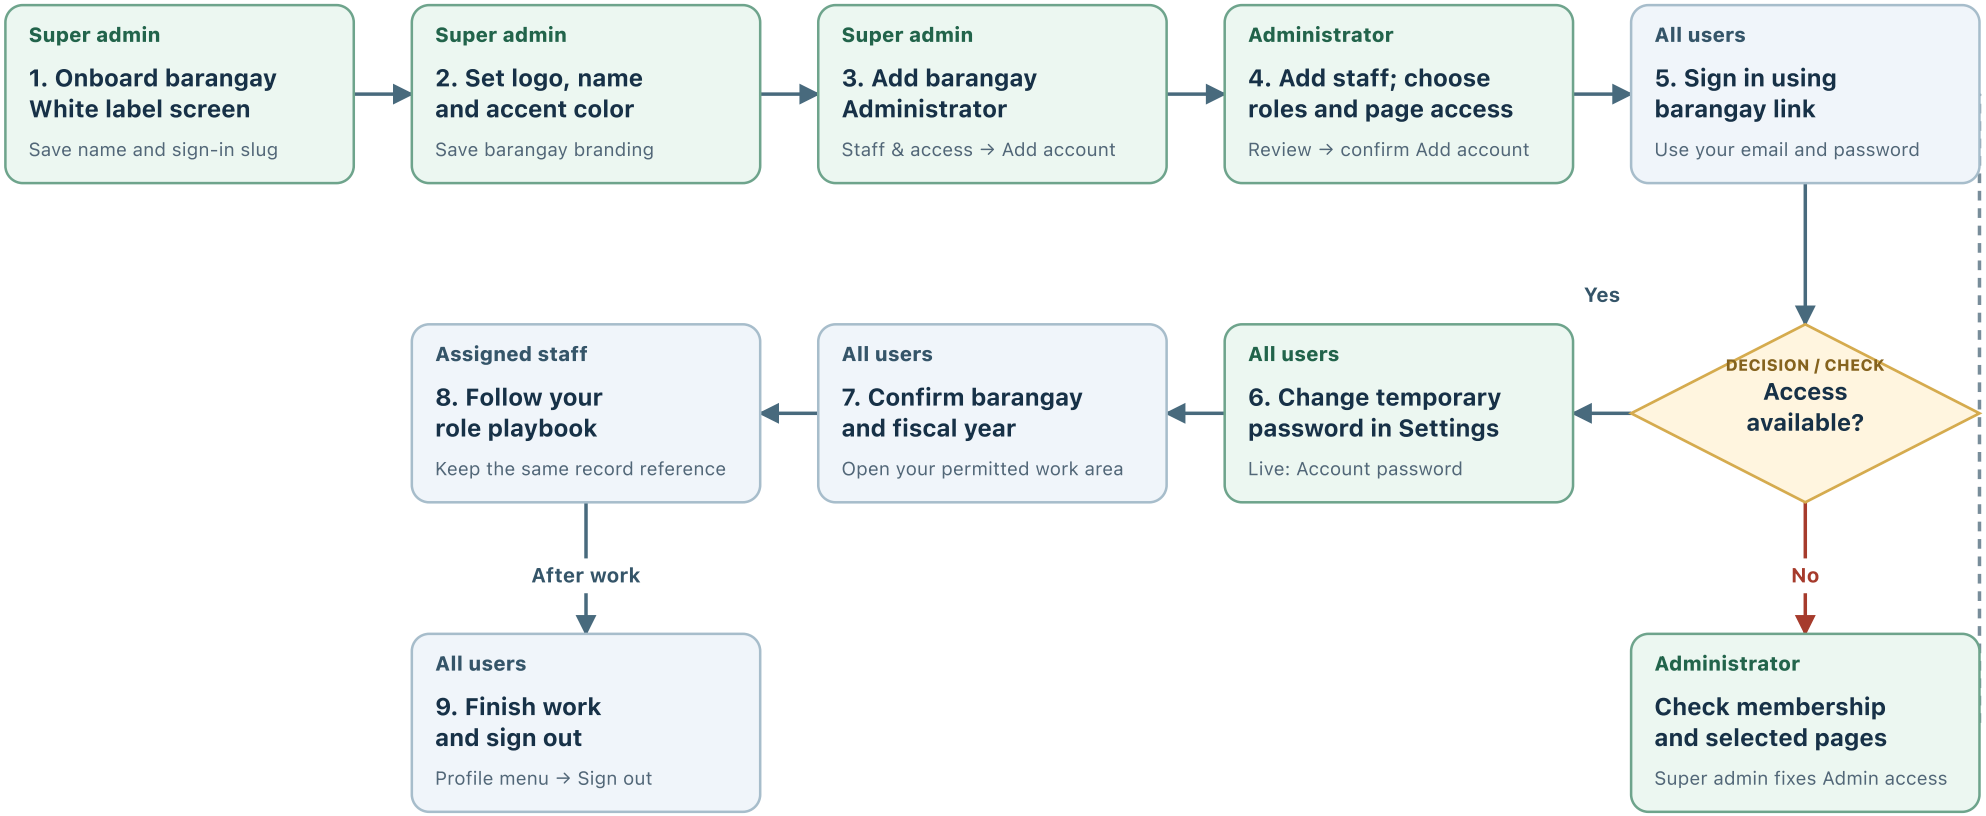

The named staff role checks and coordinates its work; the save line identifies who can perform the current live action. SA means Super admin.

Rejected DVs return to the preparer for a corrected new case. Detailed charts below show rejection, budget shortfalls, partial matching and advance balances.

Setup and access: put the right people in the right barangay.

Follow the account setup sequence before any financial work. A barangay sign-in link identifies the workspace; saved membership and page choices determine access.

The whole system → Super admin steps ↗ Administrator steps ↗

Follow numbered boxes and arrowheads. Solid arrow = next step; dashed arrow = handoff or retry; red branch = resolve before continuing. Open the diagram to zoom or use its role links.

Live action by the named authorized role · Review / coordinate; read the save line · Decision or check, as described in the notes

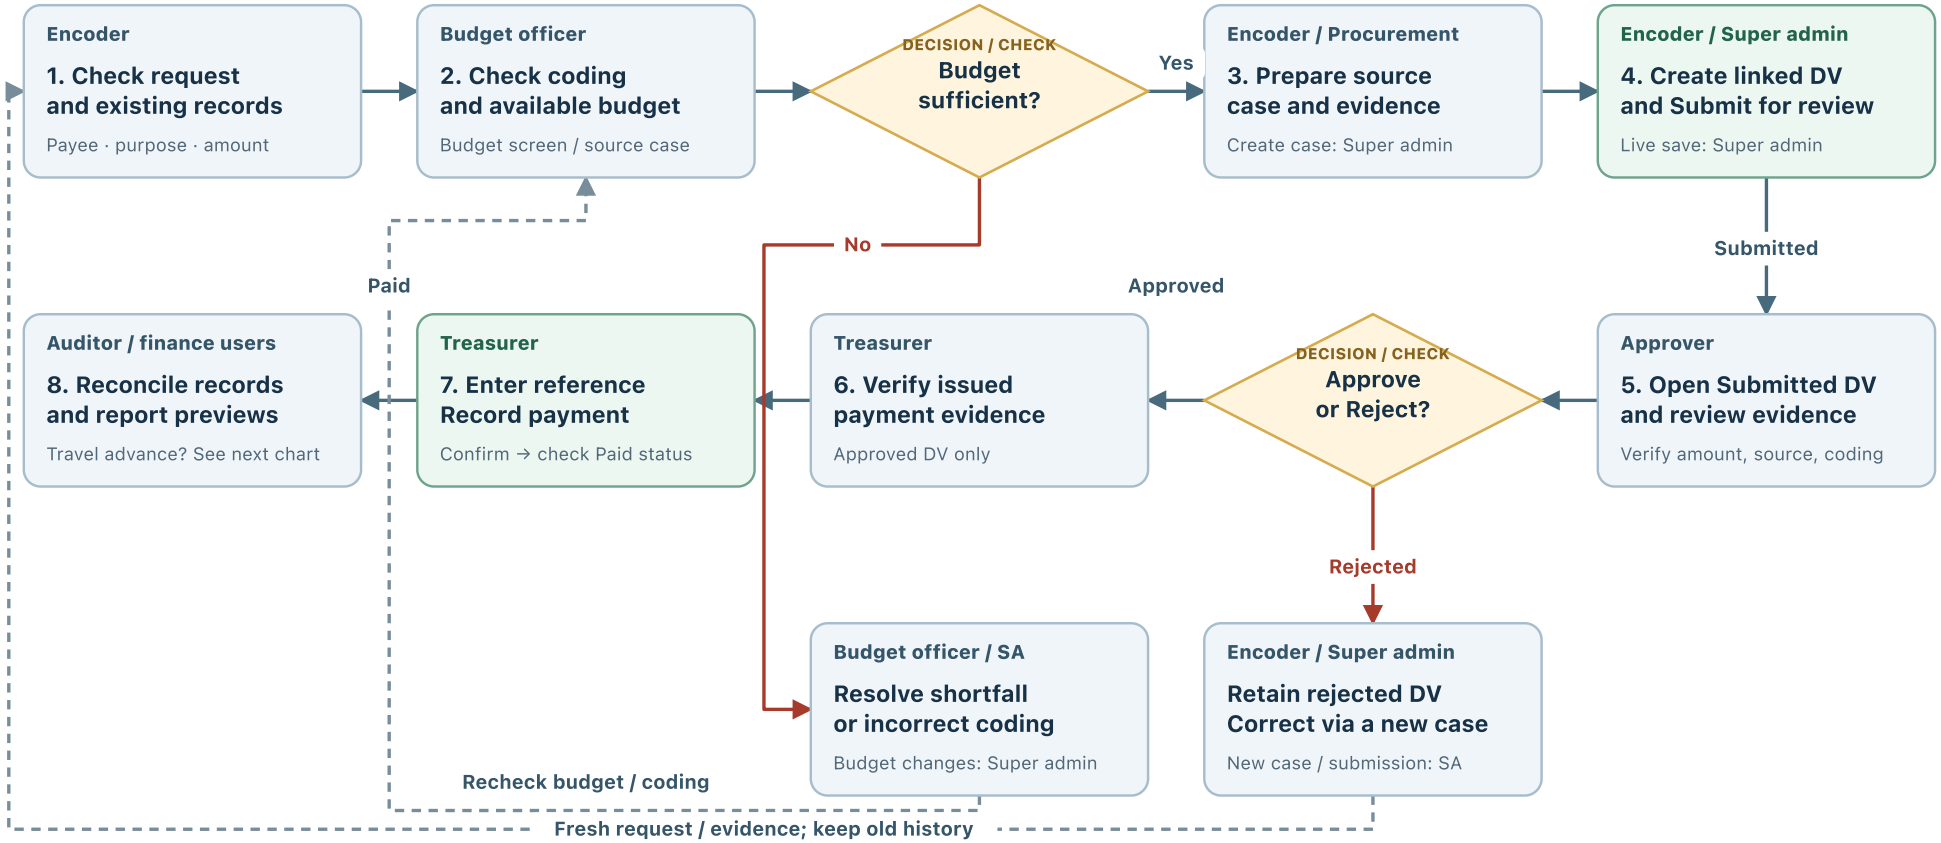

Custom page selections replace the account's role defaults for the selected barangay. Settings remains available when no financial pages are selected.

An Administrator can manage staff; only a Super admin manages Administrator roles or White label. A role's page access does not add financial posting authority.

Spending: from request to approval and recorded payment.

All five expense sources converge on a linked disbursement voucher (DV). Follow the decision labels before passing the same case and voucher references to the next role.

Procurement → Travel advances → Reports and oversight → Encoder steps ↗ Budget steps ↗ Approver steps ↗ Treasurer steps ↗

Follow numbered boxes and arrowheads. Solid arrow = next step; dashed arrow = handoff or retry; red branch = resolve before continuing. Open the diagram to zoom or use its role links.

Live action by the named authorized role · Review / coordinate; read the save line · Decision or check, as described in the notes

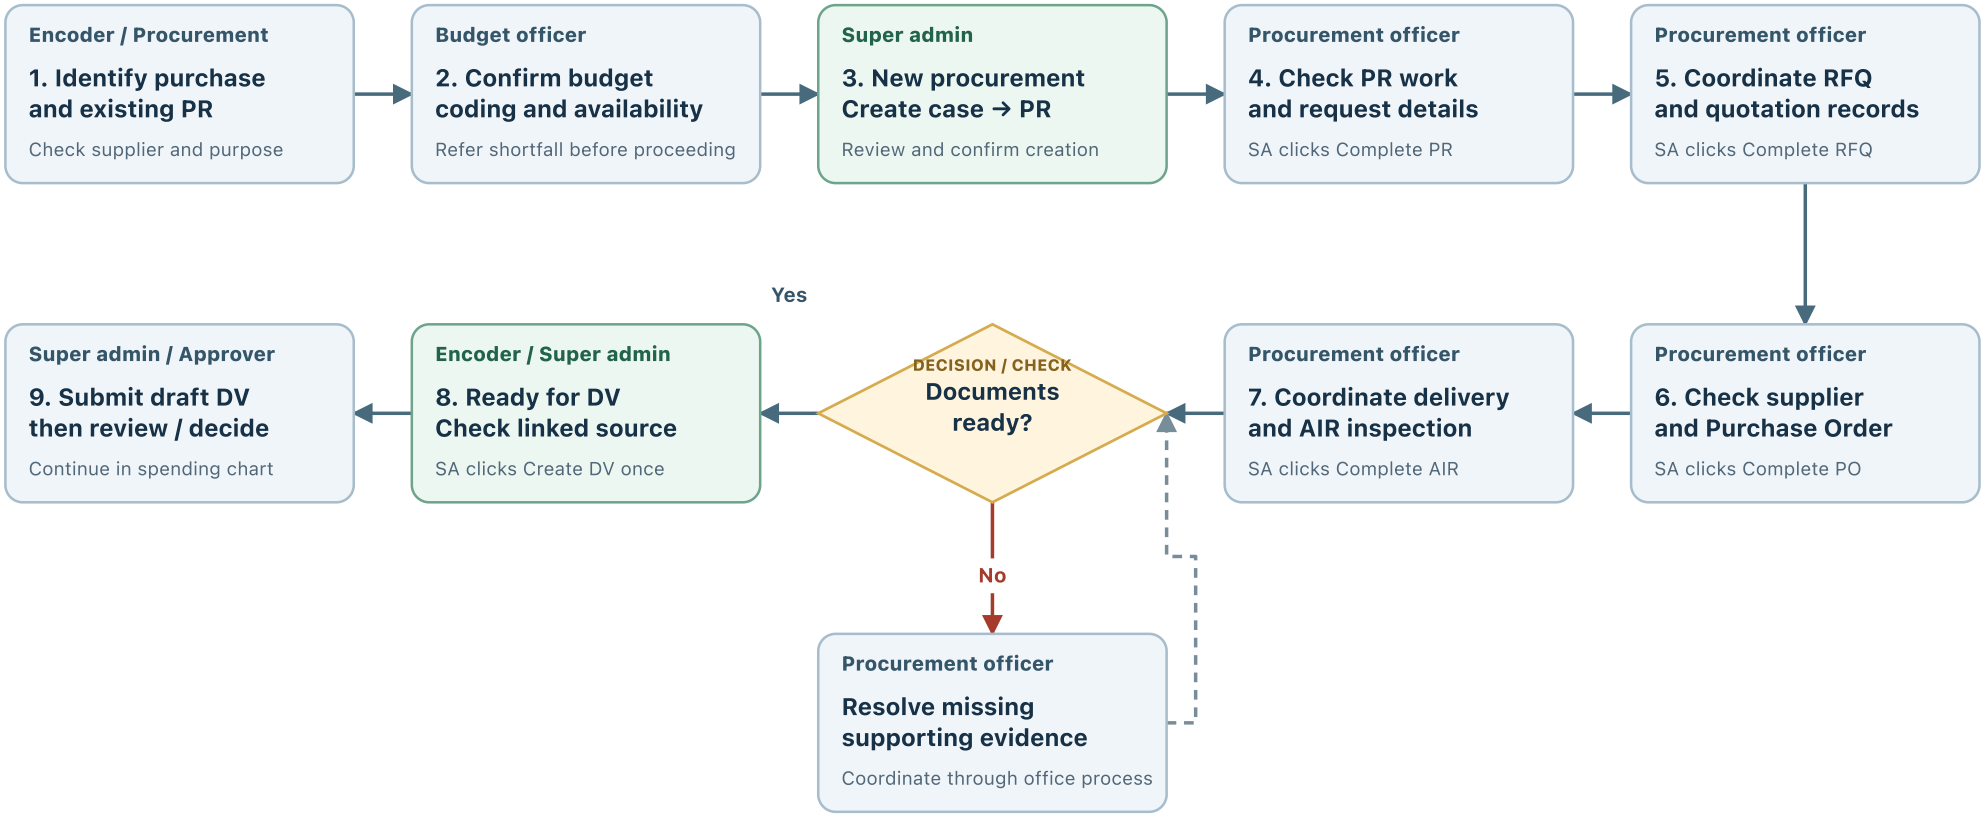

Sources: Procurement (PR → RFQ → Purchase Order → AIR), Payroll, Recurring fees, Travel or SK transfer. Non-procurement cases start Ready for DV.

Assigned Approvers can approve/reject; assigned Treasurers can record payment. Ordinary self-approval is blocked. The app has no Return/edit/resubmit path for a rejected DV; payment records the full amount and does not send money.

Procurement: PR, quotations, Purchase Order and inspection.

Procurement officer (PO) coordinates the document work; Super admin advances the current system stages. A Purchase Order is a document stage, distinct from the PO role abbreviation.

Spending → Procurement officer steps ↗ Encoder steps ↗ Budget steps ↗

Follow numbered boxes and arrowheads. Solid arrow = next step; dashed arrow = handoff or retry; red branch = resolve before continuing. Open the diagram to zoom or use its role links.

Live action by the named authorized role · Review / coordinate; read the save line · Decision or check, as described in the notes

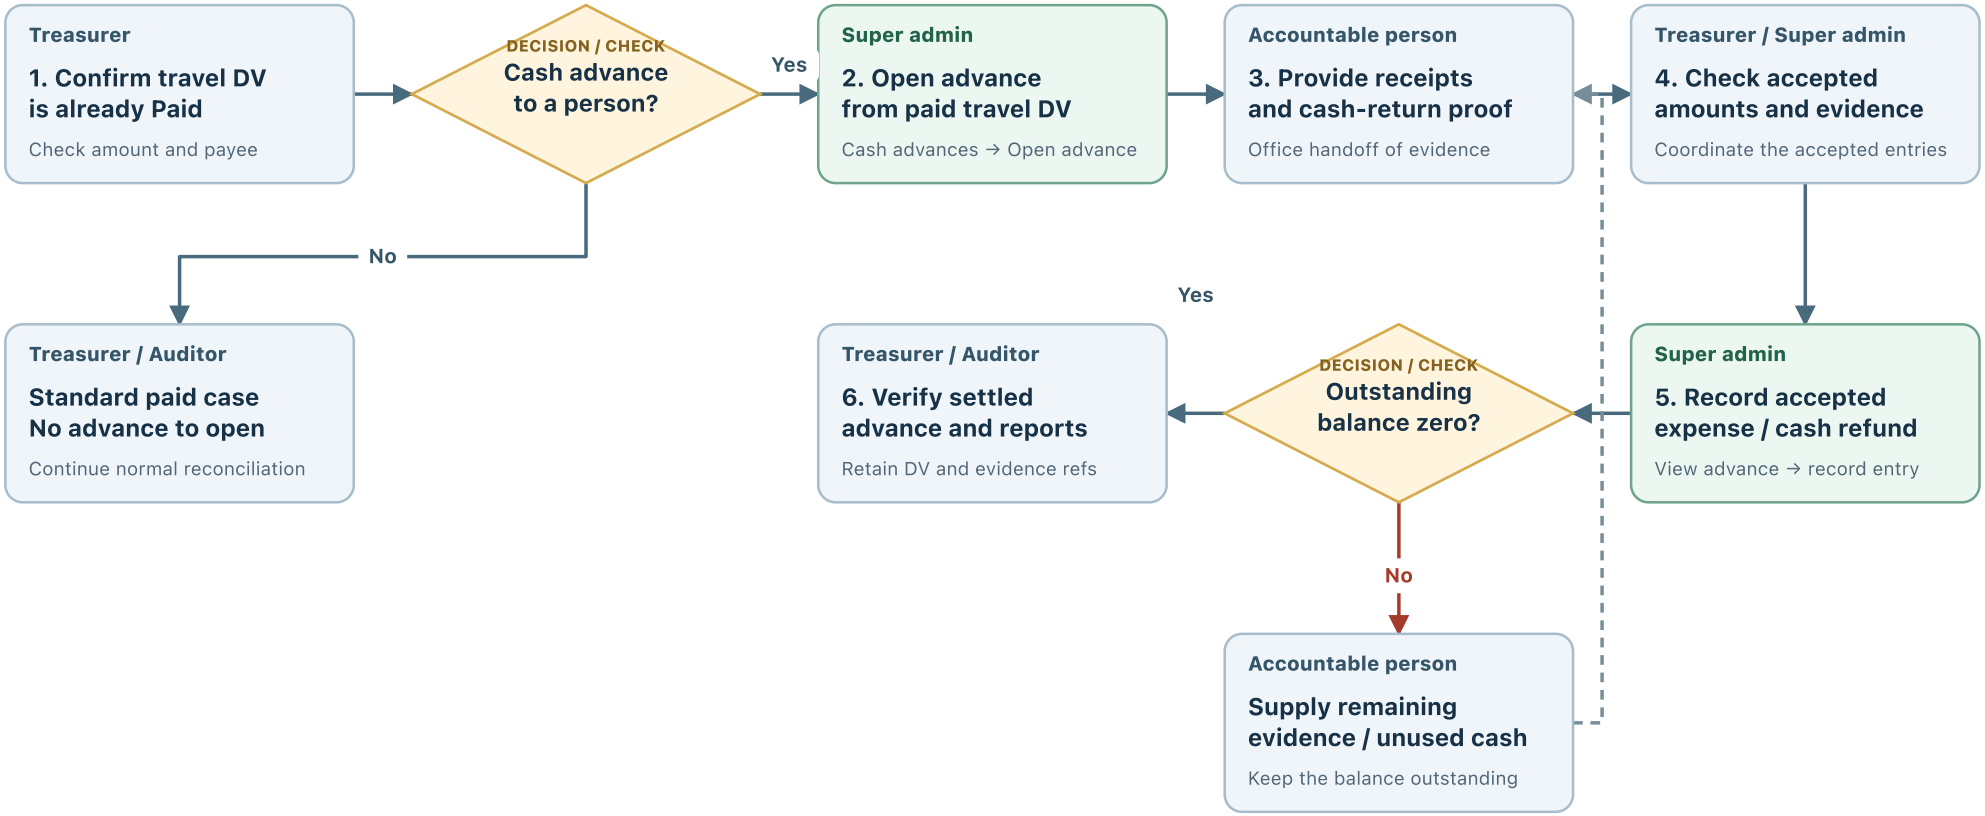

Send the same procurement case reference, supplier details and supporting records to the Encoder / Super admin for DV preparation. Procurement alone does not grant the Disbursements page.

The document-readiness diamond is an office check, not an implemented certification button. Stage changes track progress; they do not produce official PR, RFQ, PO or AIR documents or validate their evidence.

Travel advances: settle the amount already paid.

Start only after a travel voucher is paid. Track the accountable person's use of the advance, accepted expenses and returned cash without recording a second payment.

Spending → Reports and oversight → Treasurer steps ↗ Auditor steps ↗

Follow numbered boxes and arrowheads. Solid arrow = next step; dashed arrow = handoff or retry; red branch = resolve before continuing. Open the diagram to zoom or use its role links.

Live action by the named authorized role · Review / coordinate; read the save line · Decision or check, as described in the notes

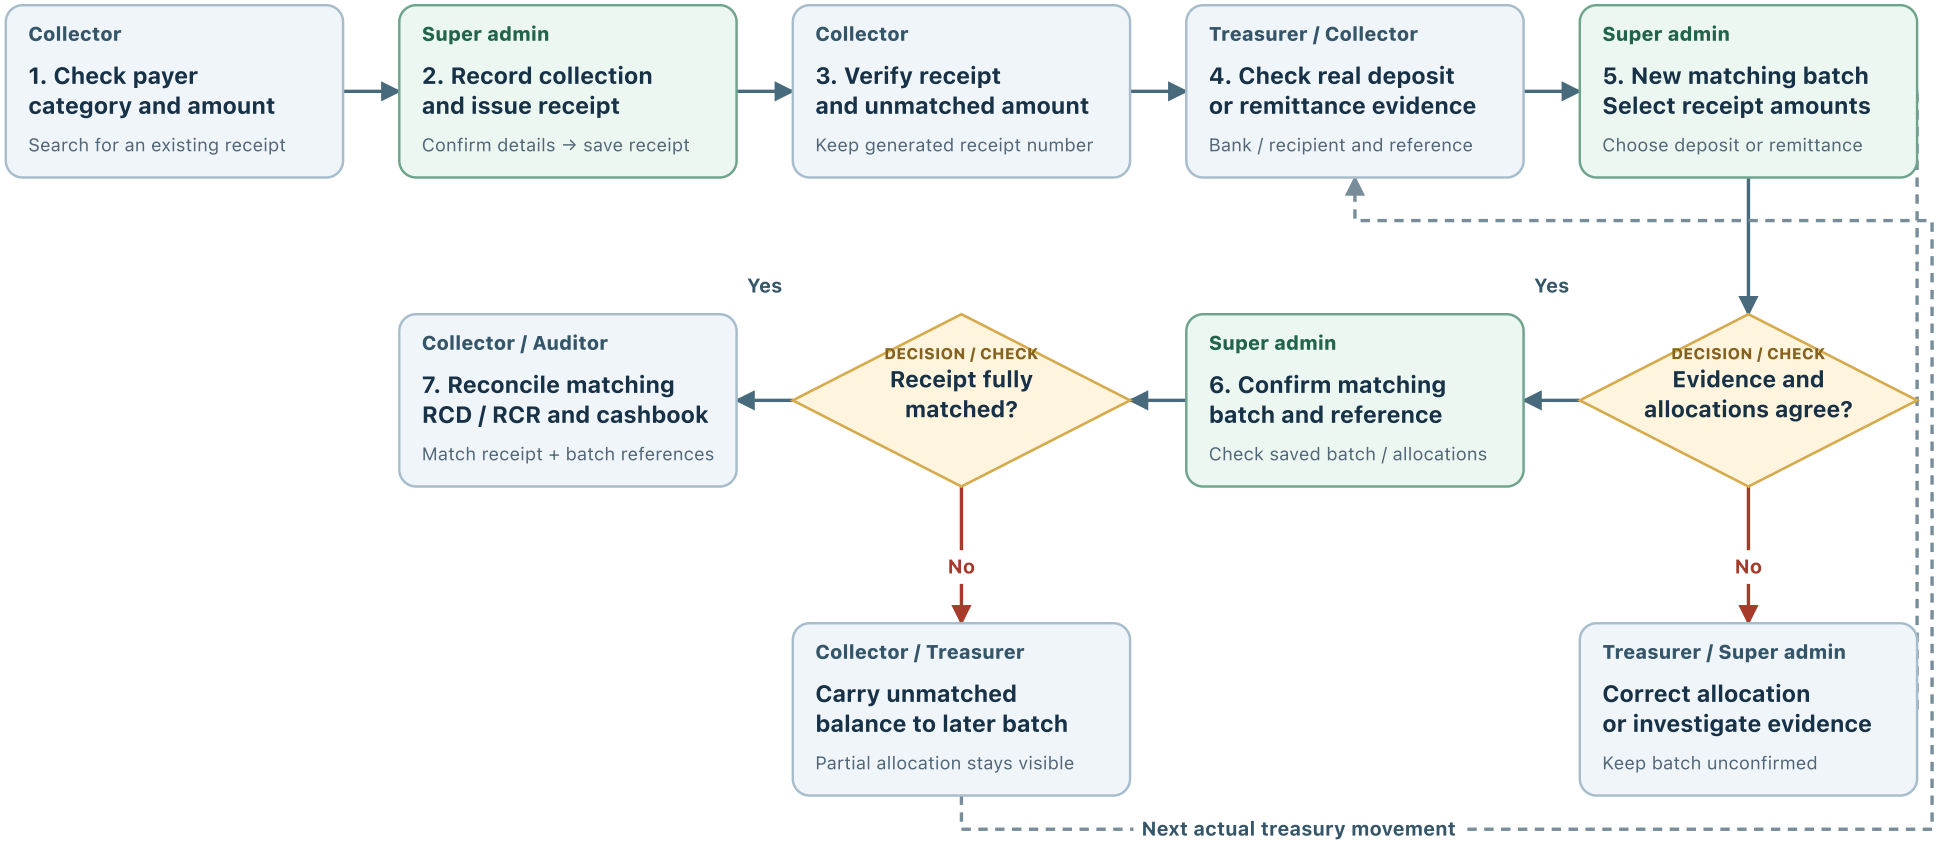

Current live saves for opening an advance and recording liquidation/refund entries require Super admin access. Treasurer reviews the balance and evidence; the accountable person is an office participant, not an additional app role.

Example: ₱8,900 advance – ₱8,000 accepted expenses – ₱900 refund = zero. Formal liquidation submission, due-date review and separate approval are not implemented; follow your established review process.

Collections: from payer details to confirmed treasury matching.

Follow each receipt into its bank deposit or treasury remittance. Collector prepares and checks; Treasurer checks treasury evidence; Super admin records receipts and matching batches in the current live app.

Reports and oversight → Collector steps ↗ Treasurer steps ↗

Follow numbered boxes and arrowheads. Solid arrow = next step; dashed arrow = handoff or retry; red branch = resolve before continuing. Open the diagram to zoom or use its role links.

Live action by the named authorized role · Review / coordinate; read the save line · Decision or check, as described in the notes

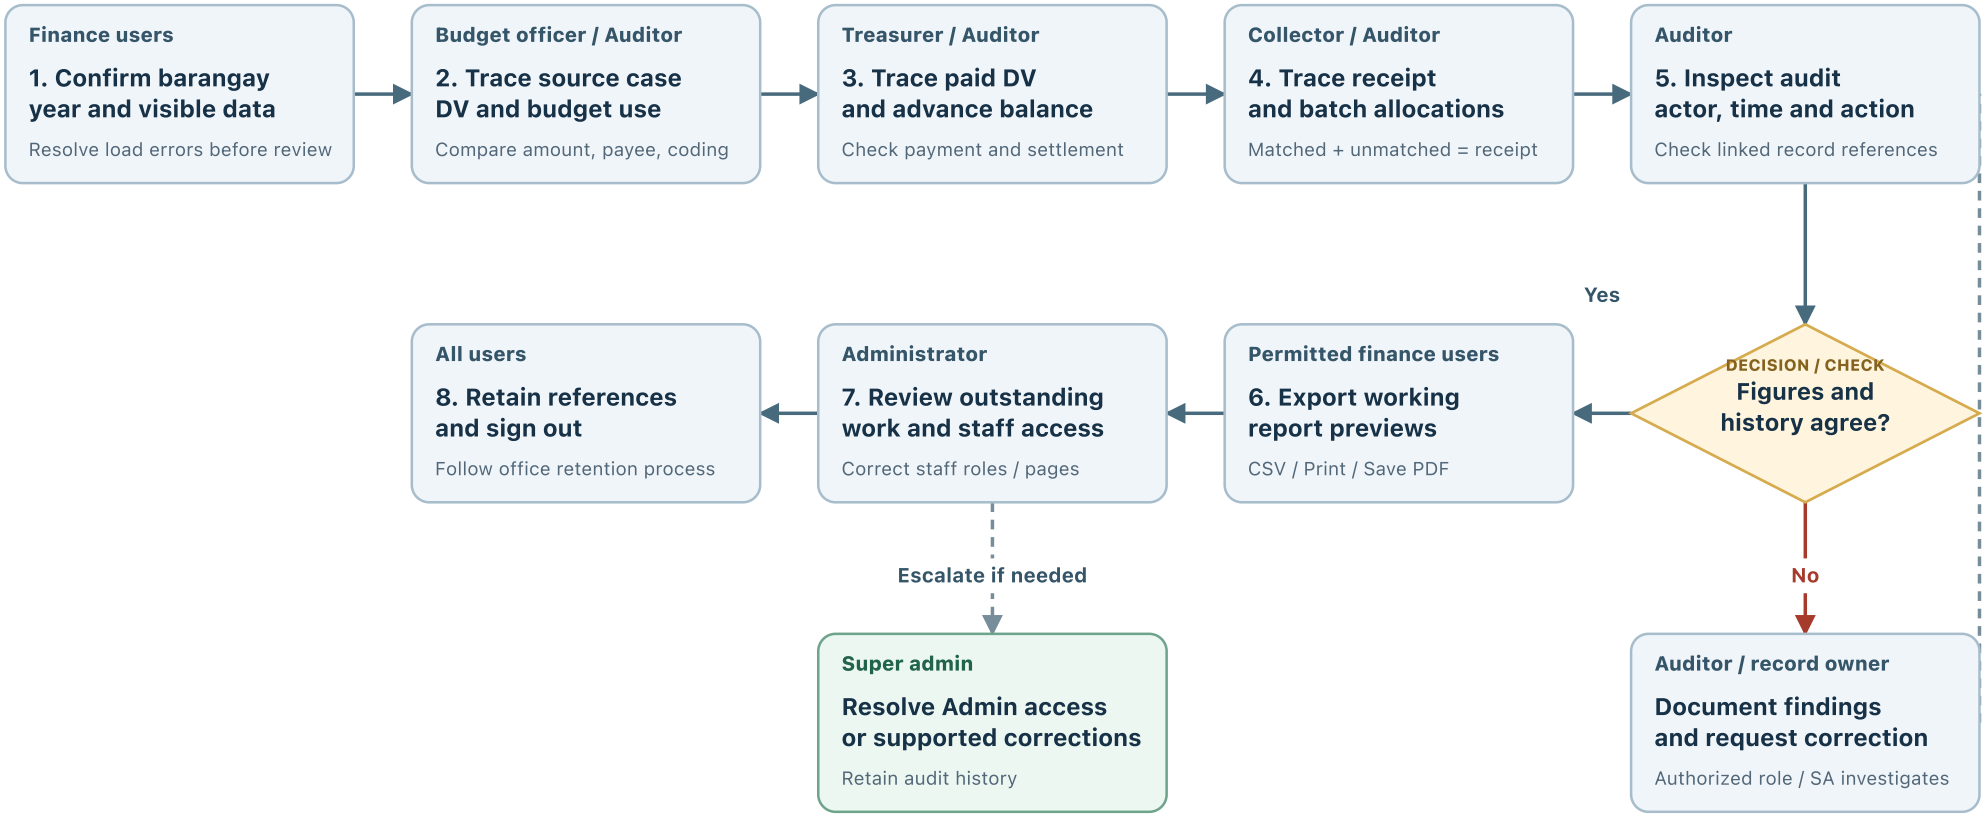

A bank deposit moves previously collected cash into the bank; it is not additional revenue. A treasury remittance reduces cash and increases remitted collections. Allocations may be partial and cannot exceed unmatched amounts.

To correct an issued receipt, coordinate with Super admin: an unallocated issued receipt can be voided and stays in history. A receipt already allocated to a batch cannot be voided through that action.

Reports and oversight: trace records, investigate and follow up.

Review the spending and revenue branches together. Findings return to the responsible owner; staff access issues return to the Administrator or Super admin.

The whole system → Auditor steps ↗ Administrator steps ↗ Super admin steps ↗

Follow numbered boxes and arrowheads. Solid arrow = next step; dashed arrow = handoff or retry; red branch = resolve before continuing. Open the diagram to zoom or use its role links.

Live action by the named authorized role · Review / coordinate; read the save line · Decision or check, as described in the notes

Auditor reviews and reports findings; it does not edit records. The current audit page shows the latest loaded events. Reports depend on the account's visible records; check scope before comparing totals.

These are working report previews and system copies. Formal period lock/reopening, archived snapshots and several prescribed report templates remain pending. A review here does not complete an official period close.

Two journeys, one connected record trail.

Set up the barangay and access first. Spending and revenue then follow their own linked records.

SUPER ADMIN

1. Set up

Create barangay → branding → administrator

→

ADMINISTRATOR

2. Give access

Create staff accounts → assign roles

→

ALL USERS

3. Enter workspace

Sign in → confirm barangay and year

Who clicks the financial actions today?

Super admins create and submit records. Assigned Approvers review and approve/reject submitted DVs; assigned Treasurers record payment. Other posting steps still require a Super admin. Follow the dedicated role playbooks for each person's sequence and handoff. A Super admin can also complete a one-account support/test flow.

Default pages by role.

Role defaults control the sidebar and direct page URLs. An account-specific selection can replace these defaults in one barangay.

Role	Budget	Expense pages	Disbursements	Revenue	Advances	Audit
Super admin	All	All	All	All	All	All
Administrator	Yes	All six	Yes	Yes	Yes	Yes
Encoder	Yes	All six	Yes	—	Yes	—
Procurement officer	Yes	Procurement only	—	—	—	—
Budget officer	Yes	All expense cases	Yes	—	Yes	—
Approver	Yes	All expense cases	Yes	—	Yes	—
Treasurer	Yes	All six	Yes	Yes	Yes	—
Collector	—	—	—	Yes	—	—
Auditor	Yes	All six	Yes	Yes	Yes	Yes

Sidebar and direct URLs

Only allowed pages appear in navigation, search and shortcuts. A direct URL to an unchecked page is blocked. Dashboard and Reports are included in all role defaults; Settings always remains available.

Custom pages replace role defaults

In Staff & access, Customize pages lets an administrator check or uncheck financial pages for one person. The selection applies across all of that person's roles in this barangay. Use role defaults restores the active-role union.

Supporting records

An allowed page can read its required supporting records: matching needs receipts; expense forms need budget lines; advances need paid travel vouchers. This does not grant those other page URLs or financial action authority.

Live actions are controlled separately.

Access levels determine the live application actions. Staff role labels do not currently enable financial posting through the app.

Action	Super admin	Administrator	Staff (all 7 roles)
Read financial records	All barangays	Assigned barangays	By record-access matrix
Add budget / case / voucher; submit DV	Yes	Read only	Read only
Approve / reject DV	Yes, including own vouchers; audited	With Approver role	Assigned Approver in this barangay
Record payment	Yes	With Treasurer role	Assigned Treasurer in this barangay
Record receipt, deposit or liquidation	Yes	No	No
Create barangay; change White label	Yes	No	No
Add / deactivate / reactivate staff roles	Any barangay	Own administered barangays	No
Grant / deactivate / reactivate Administrator role	Yes	No	No
Print / export available report previews	Yes	Yes	Yes, with visible records
Customize account pages	Staff and administrators	Own barangay's staff	No
Change own password in Settings	Yes	Yes	Yes

Live workspace

Financial actions save to the database. Some buttons still say "demo"; in a live workspace they save live records.

Demo workspace

Finance actions use browser data at every demo access level. Demo behavior does not grant live staff posting rights.

One-account support and flow testing

A Super admin can create, submit, approve or reject their own test vouchers, then record payment. Audit history identifies the actor and self-approval override. Staff posting rights remain controlled separately.

Start every session with the right scope.

For every role · Entry: /login or the barangay's /b/<slug> sign-in link

See the actual screens → 3 illustrated steps

01 **Open your sign-in link**

Use the address provided by your administrator. A branded sign-in link identifies the barangay; it does not grant membership.

02 **Enter email and password**

Select Sign in. Live access is determined from your account; the "Sign in as" selector appears only in demo mode.

03 **Check the workspace header**

Confirm the barangay, displayed fiscal year and mode banner before using a financial action.

04 **Replace a temporary password**

Open Settings → Account password. Enter and confirm an 8–72 character password → Change password.

05 **Open your work area**

The sidebar shows your allowed pages. Sign-in opens your first available page. If no financial pages are selected, you enter Settings.

06 **Sign out when finished**

Open the profile menu → Sign out.

Workspace navigation

Workspace: Dashboard, Budget
Spending: expense cases, five source workflows, vouchers, advances
Revenue: receipts and matching
Management: reports, audit, staff, settings

Changing barangays

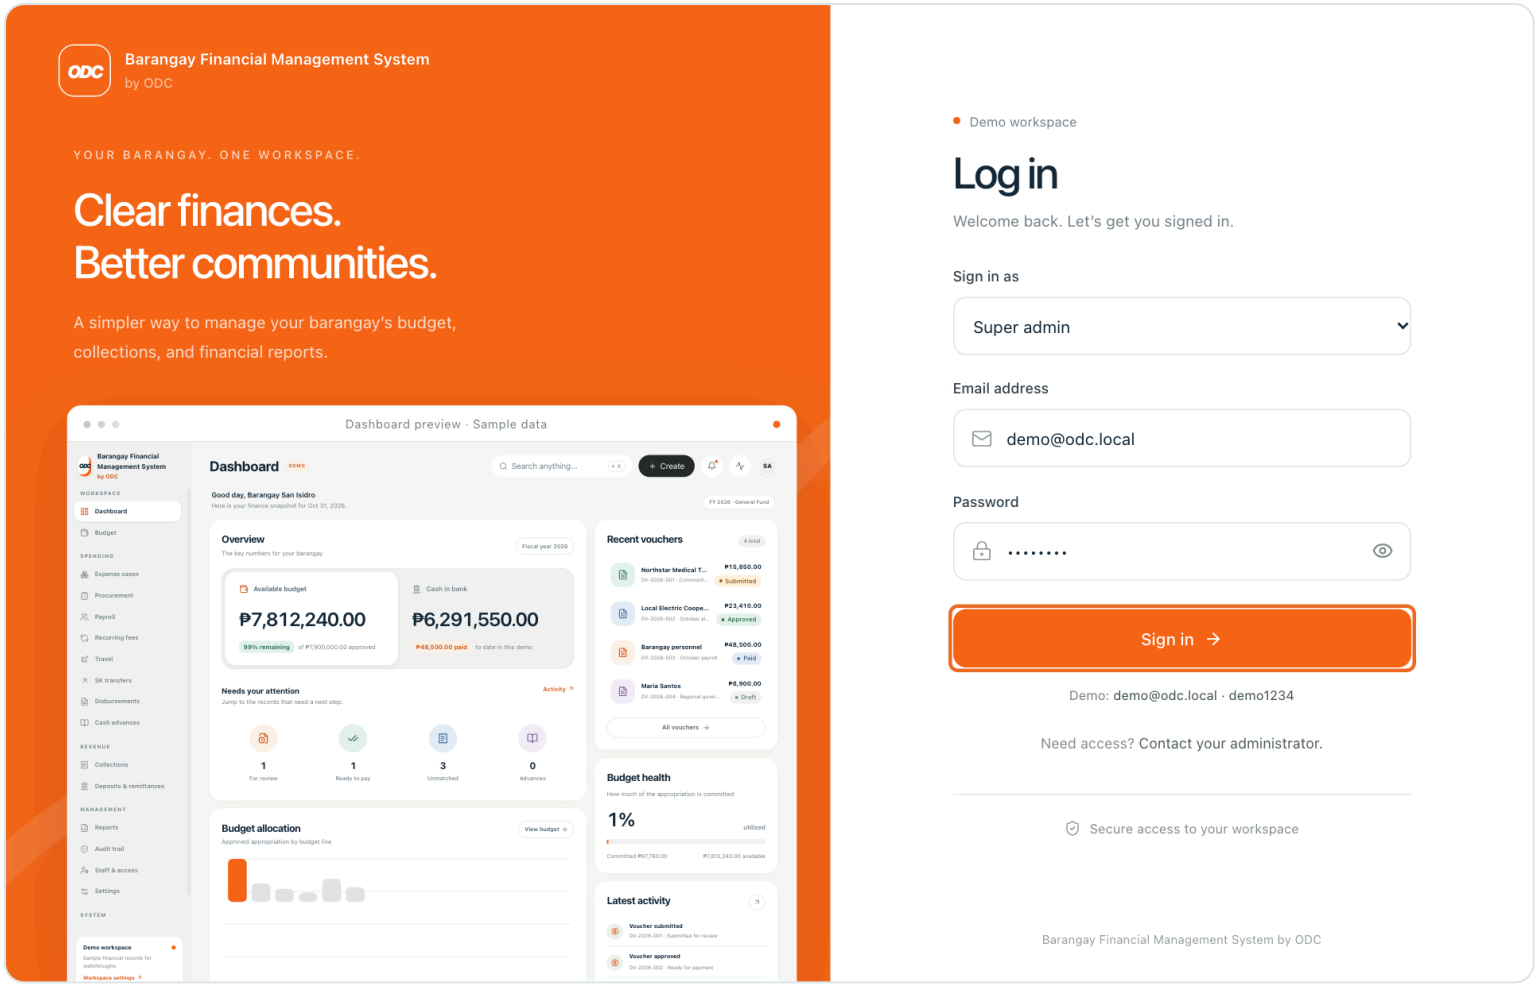

Use the header switcher when multiple authorized barangays are available. A barangay subdomain fixes the workspace. Staff management also has its own barangay selector; check it separately.

If you cannot enter

"Membership pending" means an administrator must assign active membership. "Workspace setup pending" or "setup needed" requires system setup. A successful sign-in alone does not ensure access.

Enter the workspace

Follow these steps in your workspace. Where shown, an orange outline marks the control to use.

Actual application capture · Super admin demo · 31 October 2026. Names, references and amounts are training examples. Open the image to zoom.

1. Open the sign-in address supplied by your administrator.
2. Enter your email and password, then choose Sign in. The Sign in as selector appears only in demo mode.
3. Live accounts receive their access from saved roles; use your own account details.

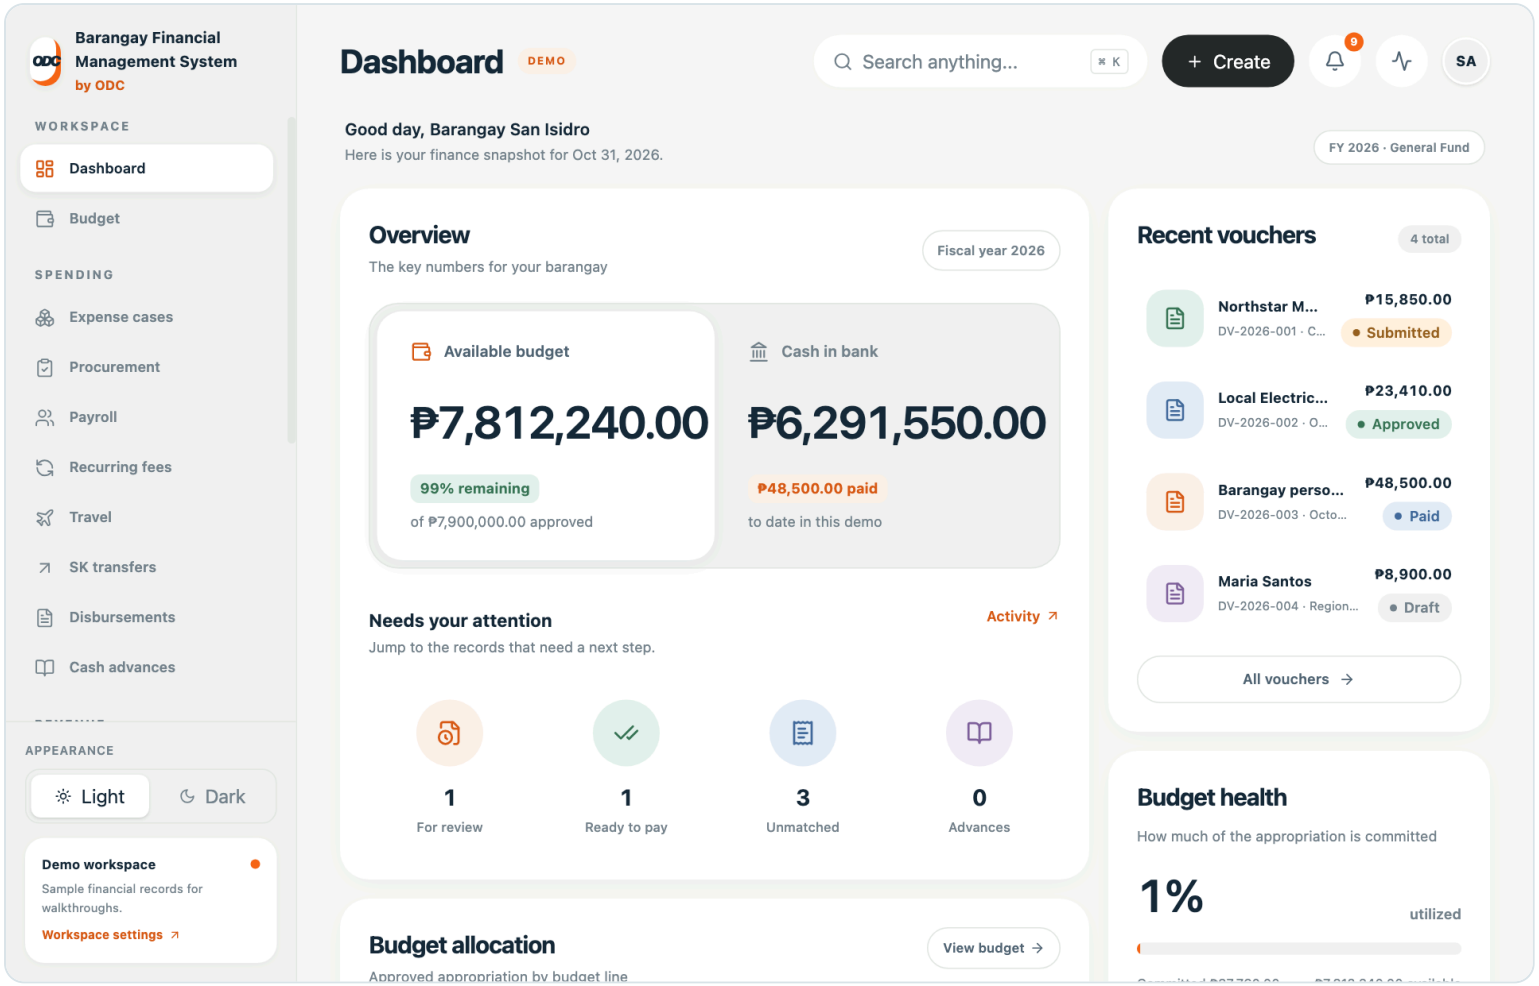

What you should see

A successful sign-in opens your first permitted page.

Next screen → **Workflow notes ↗**

Recognize your workspace

Follow these steps in your workspace. Where shown, an orange outline marks the control to use.

Actual application capture · Super admin demo · 31 October 2026. Names, references and amounts are training examples. Open the image to zoom.

1. Confirm the barangay and fiscal year shown in the workspace.
2. Use the left sidebar to open your task. The selected page is highlighted.
3. Read the summary cards and recent transactions before starting work.

What you should see

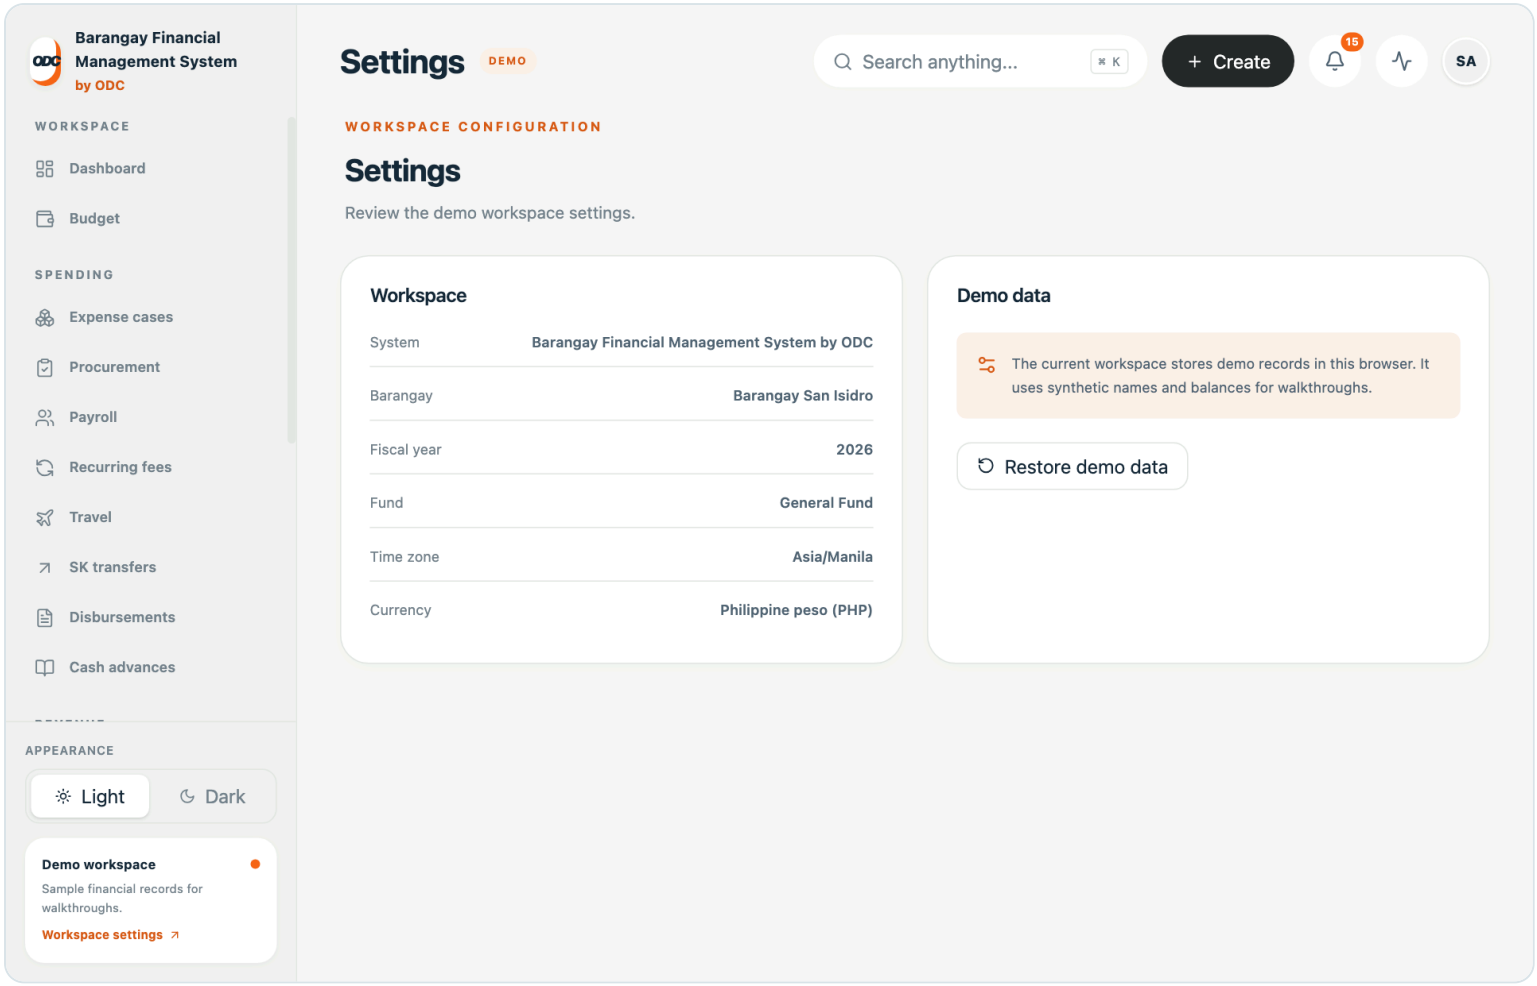

Your sidebar reflects your saved page access. These screenshots use a Super admin demo account.

← Previous screen Next screen →

Workflow notes ↗

Find account settings and demo reset

Follow these steps in your workspace. Where shown, an orange outline marks the control to use.

Actual application capture · Super admin demo · 31 October 2026. Names, references and amounts are training examples. Open the image to zoom.

1. Open Settings from the sidebar.
2. In live mode, use the account section to change your password when needed.
3. Restore demo data resets this browser's training records; use it only when you intend to restart practice.

What you should see

Settings remains available even when an account has no selected financial pages.

← Previous screen Workflow notes ↗

Onboard a barangay from an empty workspace.

Current live actor: Super admin · Screens: White label and Staff & access

See the actual screens → 1 illustrated steps

01 **Create the barangay**

Open White label → the barangay onboarding form. Enter the barangay name and its sign-in slug → Create barangay.

02 **Configure its identity**

Choose the barangay in Branding scope. Set its name, logo and accent color → Save changes. Use System default for the shared identity.

03 **Check the sign-in address**

Review the barangay link. If you change the slug, use Save link and distribute the updated address through your usual process.

04 **Add its administrator**

Choose Add its administrator, or open Staff & access. Select the barangay → Add account → role Administrator.

05 **Create or link the person**

Enter full name and email. Set an 8–72 character temporary password for a new sign-in account → Add to the selected barangay.

06 **Open its financial workspace**

Select that barangay in the header. Confirm its name, then proceed to Budget. Use the audit trail to trace each workflow action.

Expected result

The barangay has a sign-in link, saved branding, an active administrator membership and a selectable workspace.

Existing person

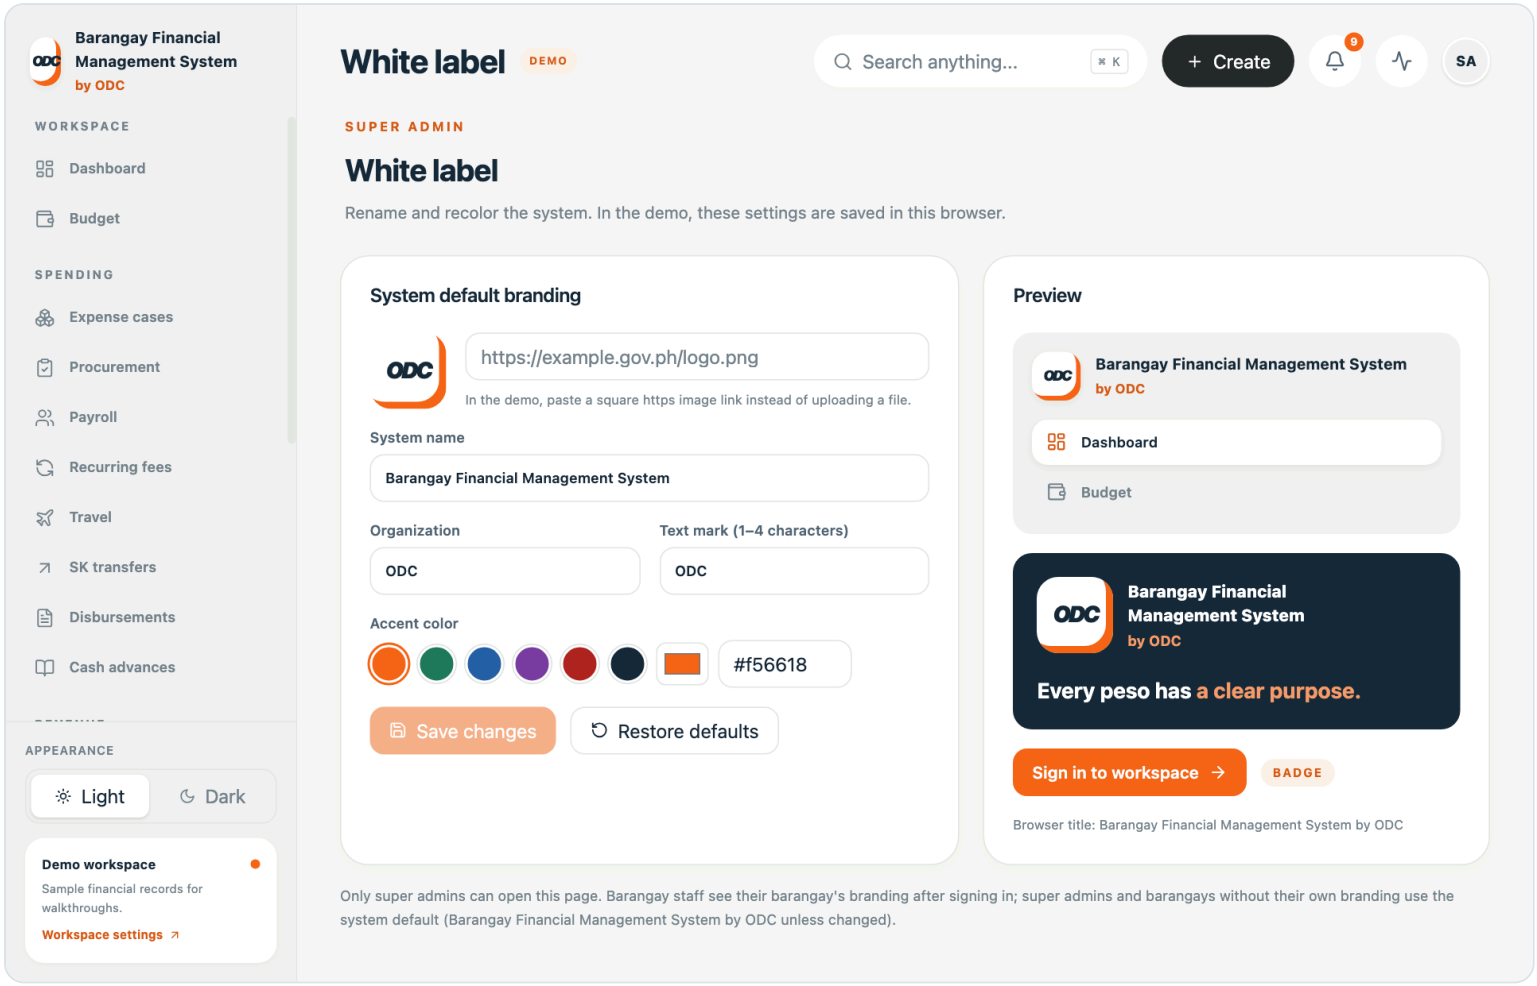

A recognized existing staff account keeps its sign-in password. Adding a membership does not create a second person.

Super admin access is separate

The Staff & access role selector creates Administrator and staff memberships. It does not grant the global Super admin role. That role must be provisioned through the system's administrator setup.

Review the system branding

Follow these steps in your workspace. Where shown, an orange outline marks the control to use.

Actual application capture · Super admin demo · 31 October 2026. Names, references and amounts are training examples. Open the image to zoom.

1. As Super admin, open White label in the sidebar.
2. Edit the system name, organization, logo mark or logo image, and accent color.
3. Check the preview before saving. This image shows the demo system branding editor.

What you should see

Live mode also provides Onboard barangay and a branding scope selector; follow the setup chapter for those live-only controls.

Workflow notes ↗

Give each person the right barangay access.

Current live actors: Administrator or Super admin · Screen: Staff & access

See the actual screens → 5 illustrated steps

1 / SELECT
Choose barangay
Confirm the Staff & access selector

→

2 / ASSIGN
Choose role
Role defaults select the initial pages

→

3 / CUSTOMIZE
Check allowed pages
One selection per person and barangay

→

4 / VERIFY
Save and reload
Sidebar and direct URLs follow the selection

01 Choose Add staff or Add account
Confirm the target barangay. Enter full name, email and a temporary password for a new account.

02 Choose the role
The page checkboxes start with role defaults. For multiple active roles, defaults combine their pages.

03 Customize the checkboxes
Check extra pages or uncheck unwanted pages. The resulting custom selection replaces role defaults for this person in this barangay.

04 Save the account
Choose Add to [barangay]. Membership and any custom page selection are saved together.

05 Change an existing account
Find the person → Customize pages → adjust checkboxes → Save page access. Use role defaults restores the role-based selection.

06 Verify access
Have the person reload. Check their sidebar and available records. Deactivate or Reactivate still controls each separate role membership.

Administrator boundary

Administrators can customize staff in their own barangays. Only Super admins can customize an Administrator's pages. Super admins always retain every page.

Keep account access available

Settings always remains available. Staff & access and White label are reserved for their administrator roles and are not financial-page checkboxes.

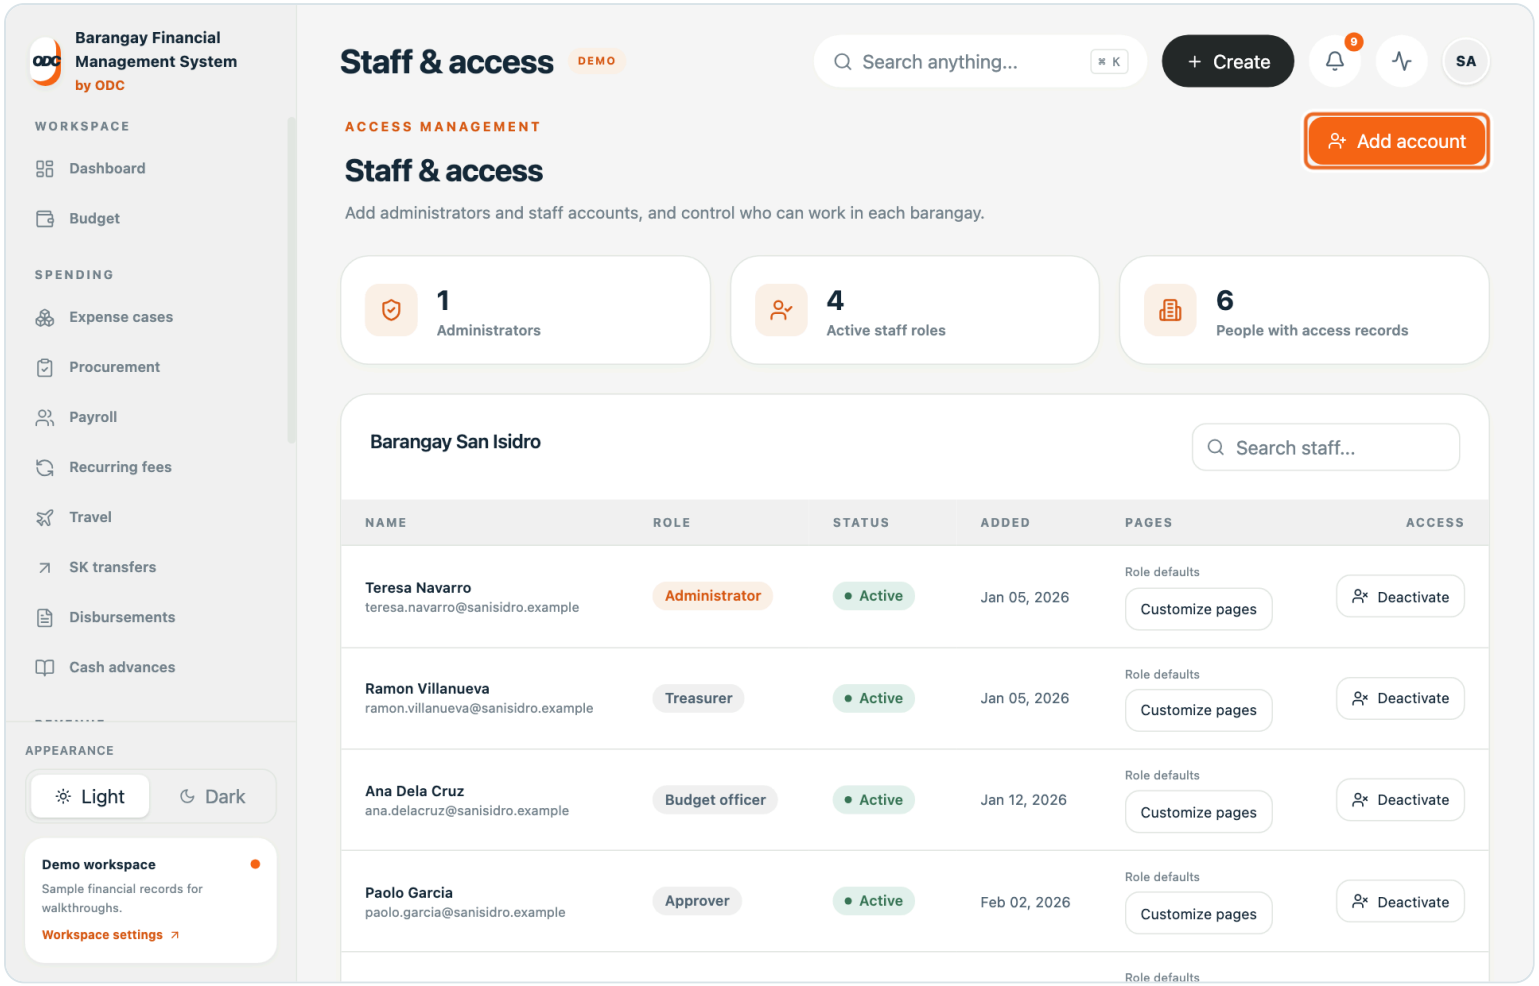

Viewing and posting are separate

Custom pages grant viewing and supporting records. Approval requires the assigned Approver role and payment requires Treasurer, or Super admin access. Page checkboxes alone do not grant transaction authority.

Basis: staff-view.tsx · page-access-editor.tsx · staff API · account_page_access migration

Find a person or add an account

Follow these steps in your workspace. Where shown, an orange outline marks the control to use.

Actual application capture · Super admin demo · 31 October 2026. Names, references and amounts are training examples. Open the image to zoom.

1. Open Staff & access and confirm the barangay.
2. Search the directory to check whether the person already exists.
3. Choose Add account (Super admin) or Add staff (Administrator).

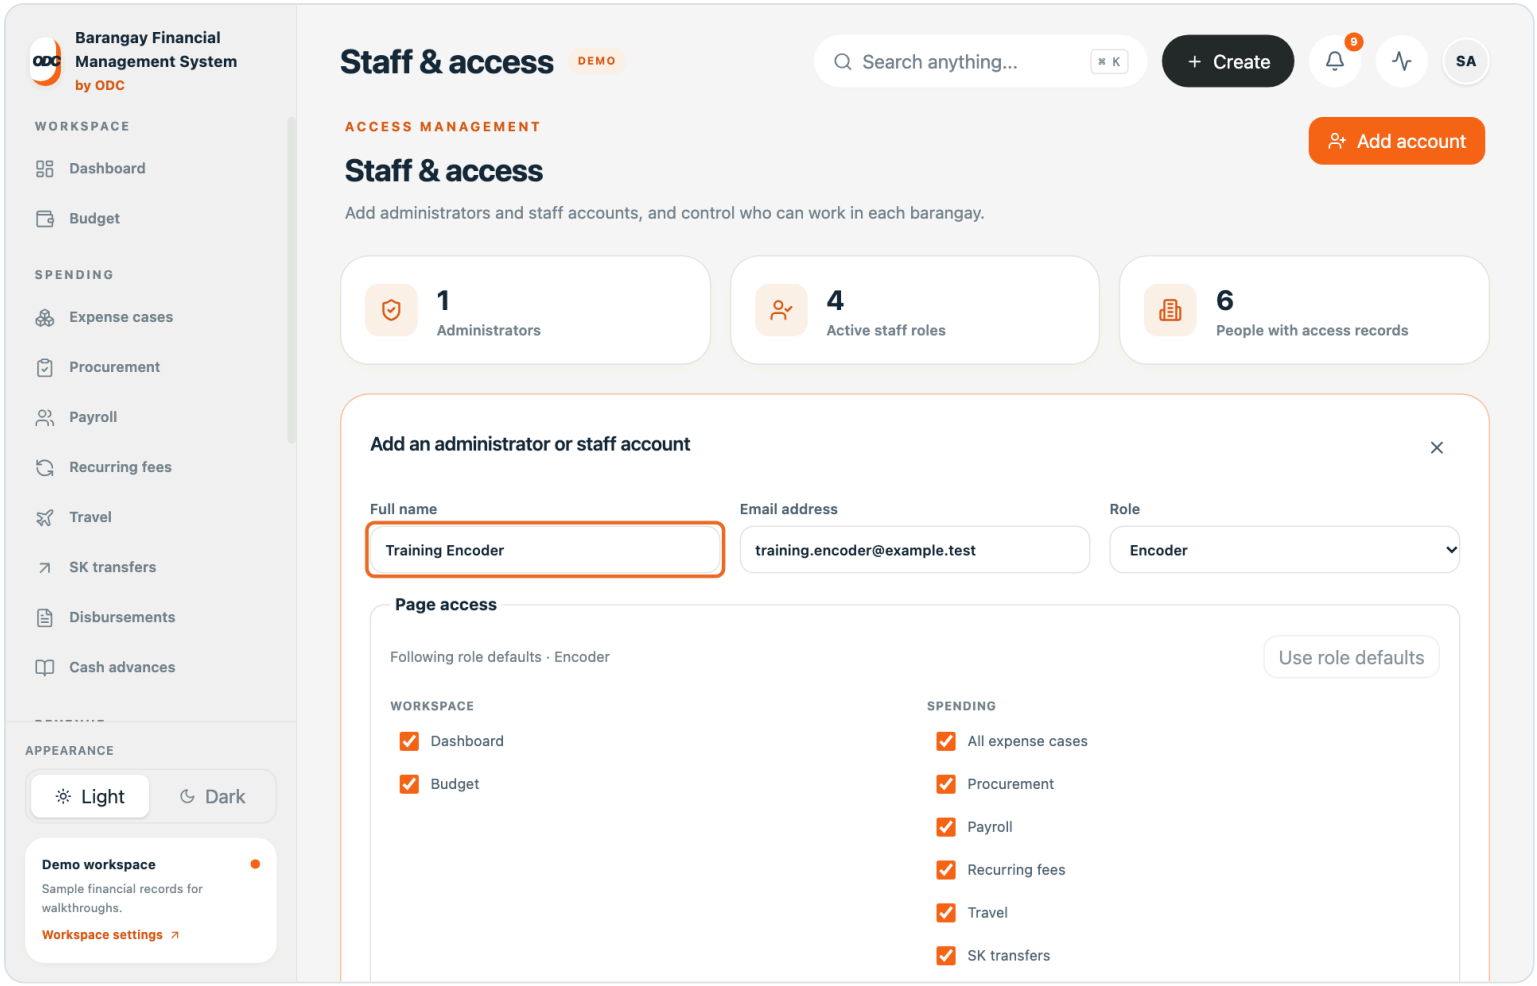

What you should see

The directory shows each person's role, status and page access.

Next screen → **Workflow notes ↗**

Set the person's role and pages

Follow these steps in your workspace. Where shown, an orange outline marks the control to use.

Actual application capture · Super admin demo · 31 October 2026. Names, references and amounts are training examples. Open the image to zoom.

1. Enter the person's name and email; select their role.
2. Review Page access. Check a page to include it or uncheck it to remove it.
3. Scroll to Add to [barangay], review the confirmation, then save when the details are correct.

What you should see

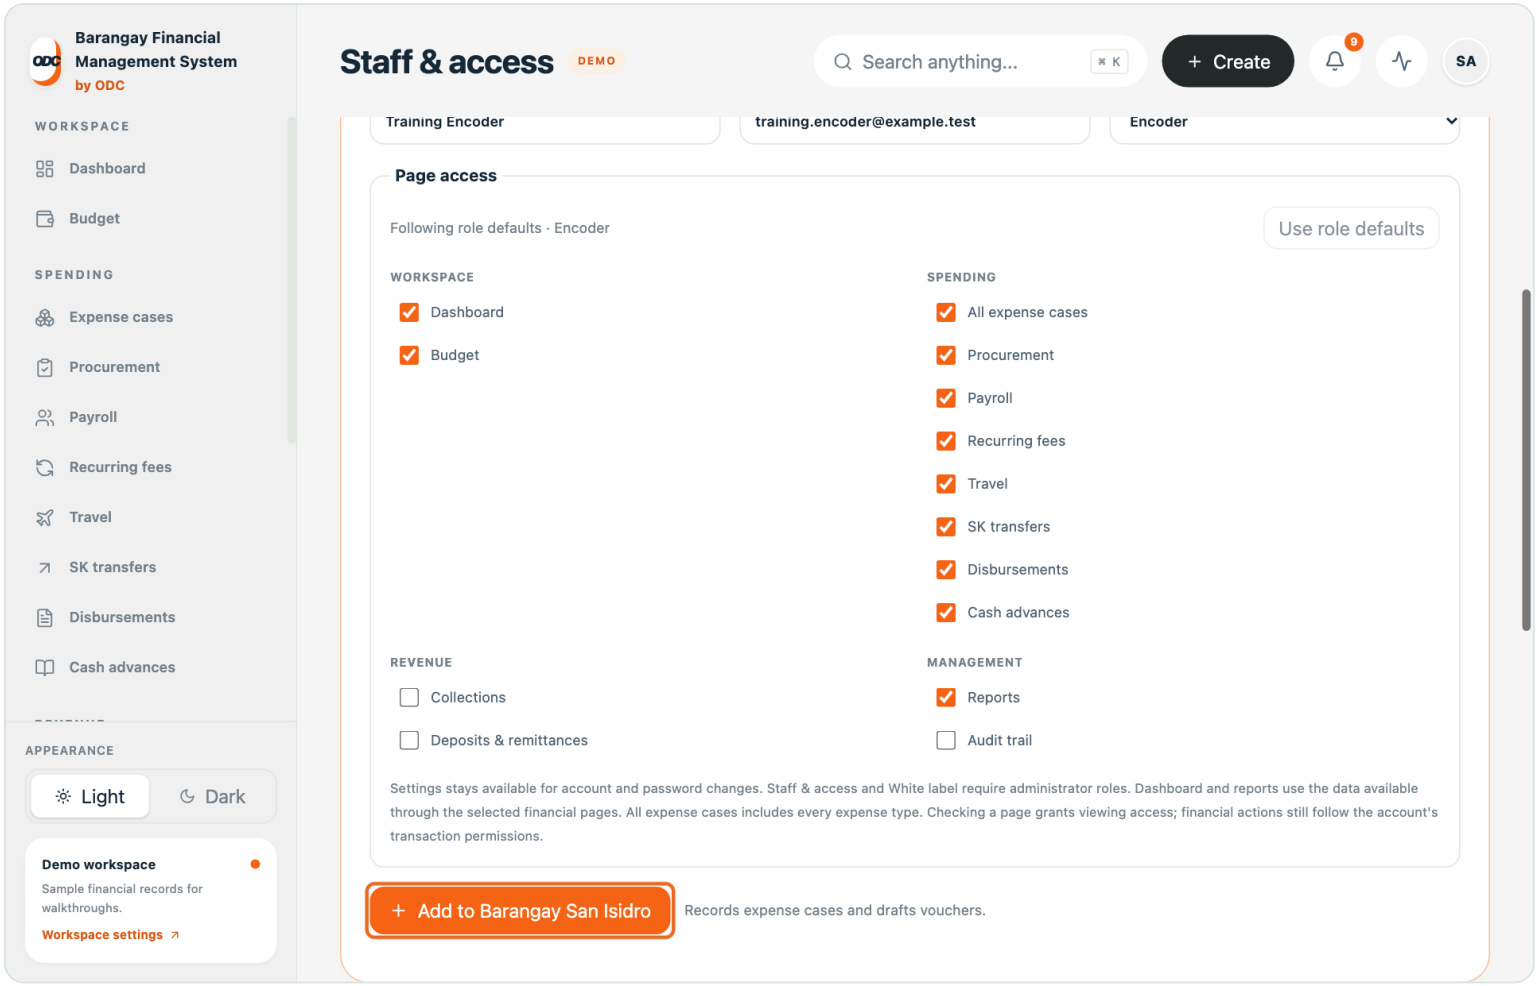

The demo form omits the live initial-password field. Page choices change viewing access; they do not grant financial posting authority.

← Previous screen Next screen →

Workflow notes ↗

Review the page list and save access

Follow these steps in your workspace. Where shown, an orange outline marks the control to use.

Actual application capture · Super admin demo · 31 October 2026. Names, references and amounts are training examples. Open the image to zoom.

1. Scroll down within the account form to see all page checkboxes.
2. Keep the intended pages selected. Use role defaults restores the role's standard selection.
3. Choose Add to Barangay San Isidro, review the confirmation and choose Add account.

What you should see

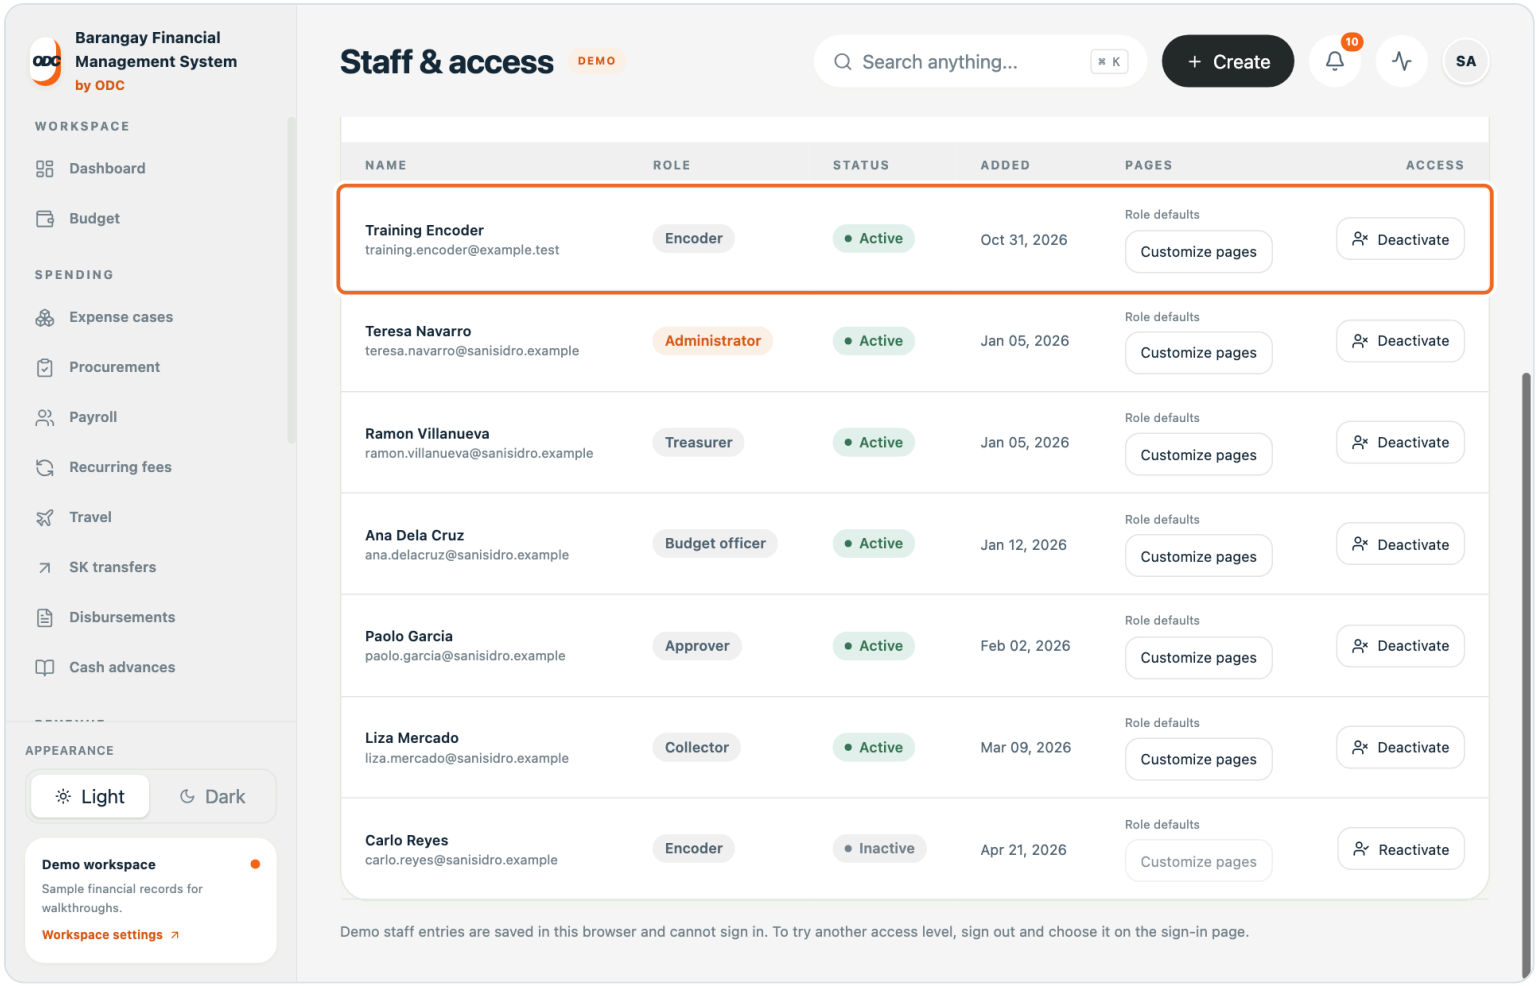

The role and page selection will be saved for this person in this barangay.

← Previous screen Next screen →

Workflow notes ↗

Verify the new staff account

Follow these steps in your workspace. Where shown, an orange outline marks the control to use.

Actual application capture · Super admin demo · 31 October 2026. Names, references and amounts are training examples. Open the image to zoom.

1. Find Training Encoder in the staff directory.
2. Check the Encoder role and active status.
3. Use Customize pages to review or change viewing access, or Deactivate if this access must end.

What you should see

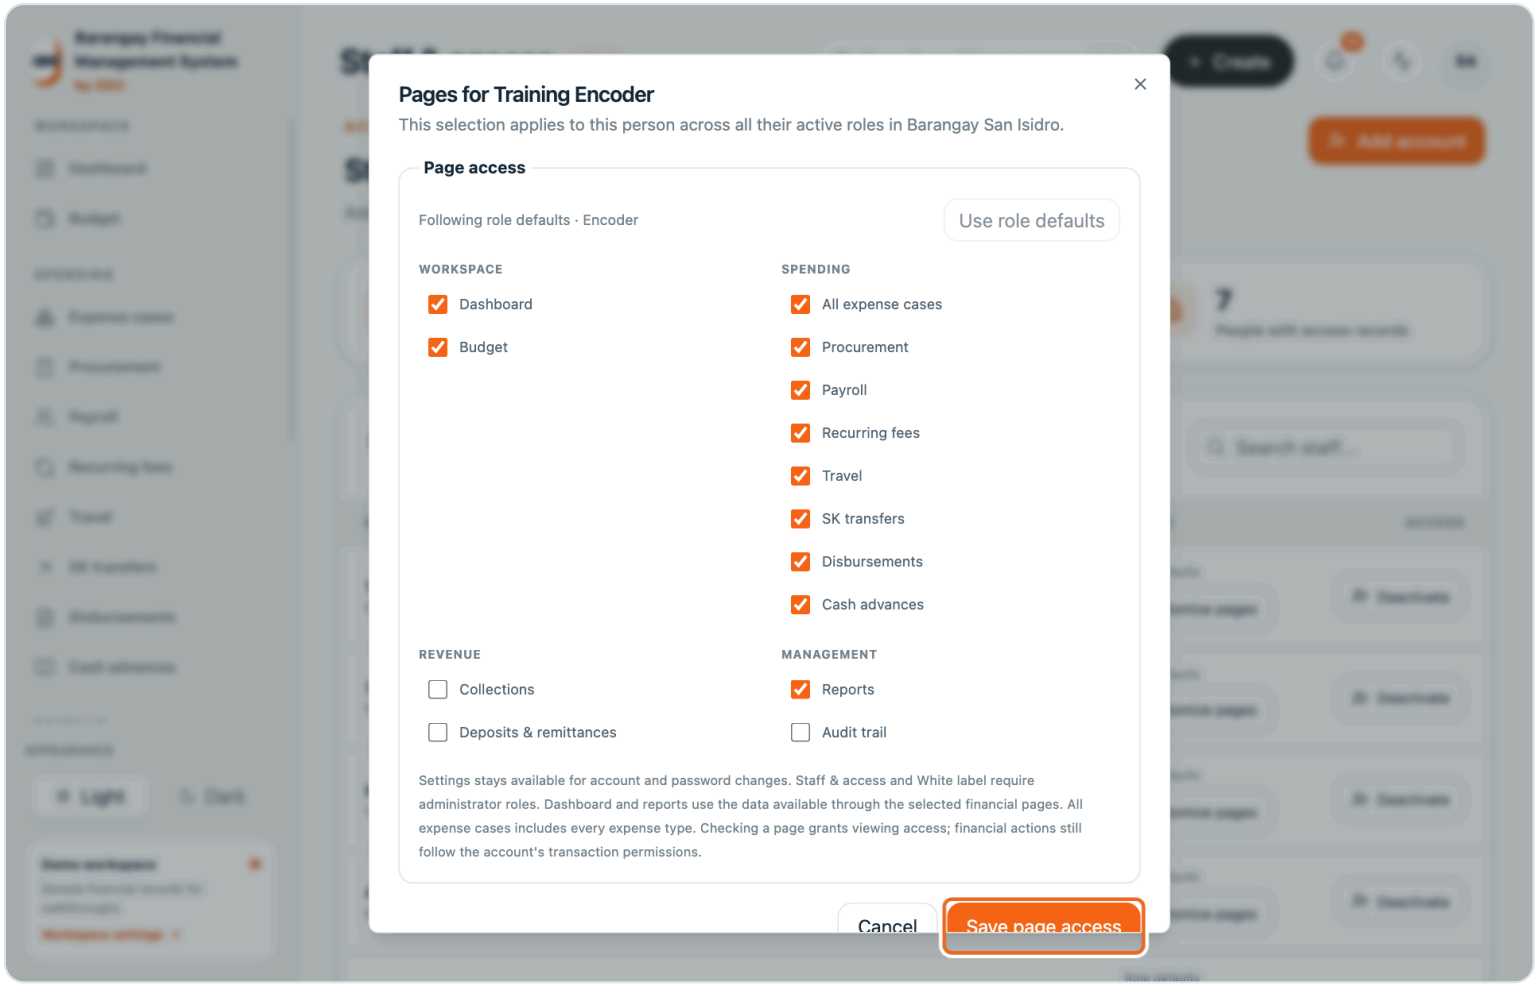

Demo accounts are practice entries in this browser. Live mode creates or links a sign-in account.

← Previous screen Next screen →

Workflow notes ↗

Change an existing person's pages

Follow these steps in your workspace. Where shown, an orange outline marks the control to use.

Actual application capture · Super admin demo · 31 October 2026. Names, references and amounts are training examples. Open the image to zoom.

1. In the person's row, choose Customize pages.
2. Adjust the checkboxes, or choose Use role defaults to restore their role's pages.
3. Choose Save page access to apply the selection. Settings remains available.

What you should see

Custom choices replace that account's role defaults for the selected barangay.

← Previous screen Workflow notes ↗

Give an expense a budget line to use.

Current live actor: Super admin · Intended staff owner: Budget officer · Screen: Budget

See the actual screens → 4 illustrated steps

01 **Review the Budget overview**

Check Total appropriation, Obligated and Available to commit. Search for an existing account before adding another.

02 **Choose Add budget line**

Enter Code, Budget line name, Category and Appropriation in pesos.

03 **Select the category**

Use Personnel Services, Maintenance & Operations, Capital Outlay or Transfers.

04 **Choose Save budget line**

Use a unique code and an amount greater than zero. Confirm the saved row and the updated total.

05 **Use the line in an expense case**

Select this line when creating the source case. The form displays its current available amount.

Training example

Add code **MOOE-TRAIN-01**, name **Community supplies**, category **Maintenance & Operations**, appropriation **₱50,000.00**. A submitted ₱10,000 DV leaves ₱40,000 available.

What changes the available amount?

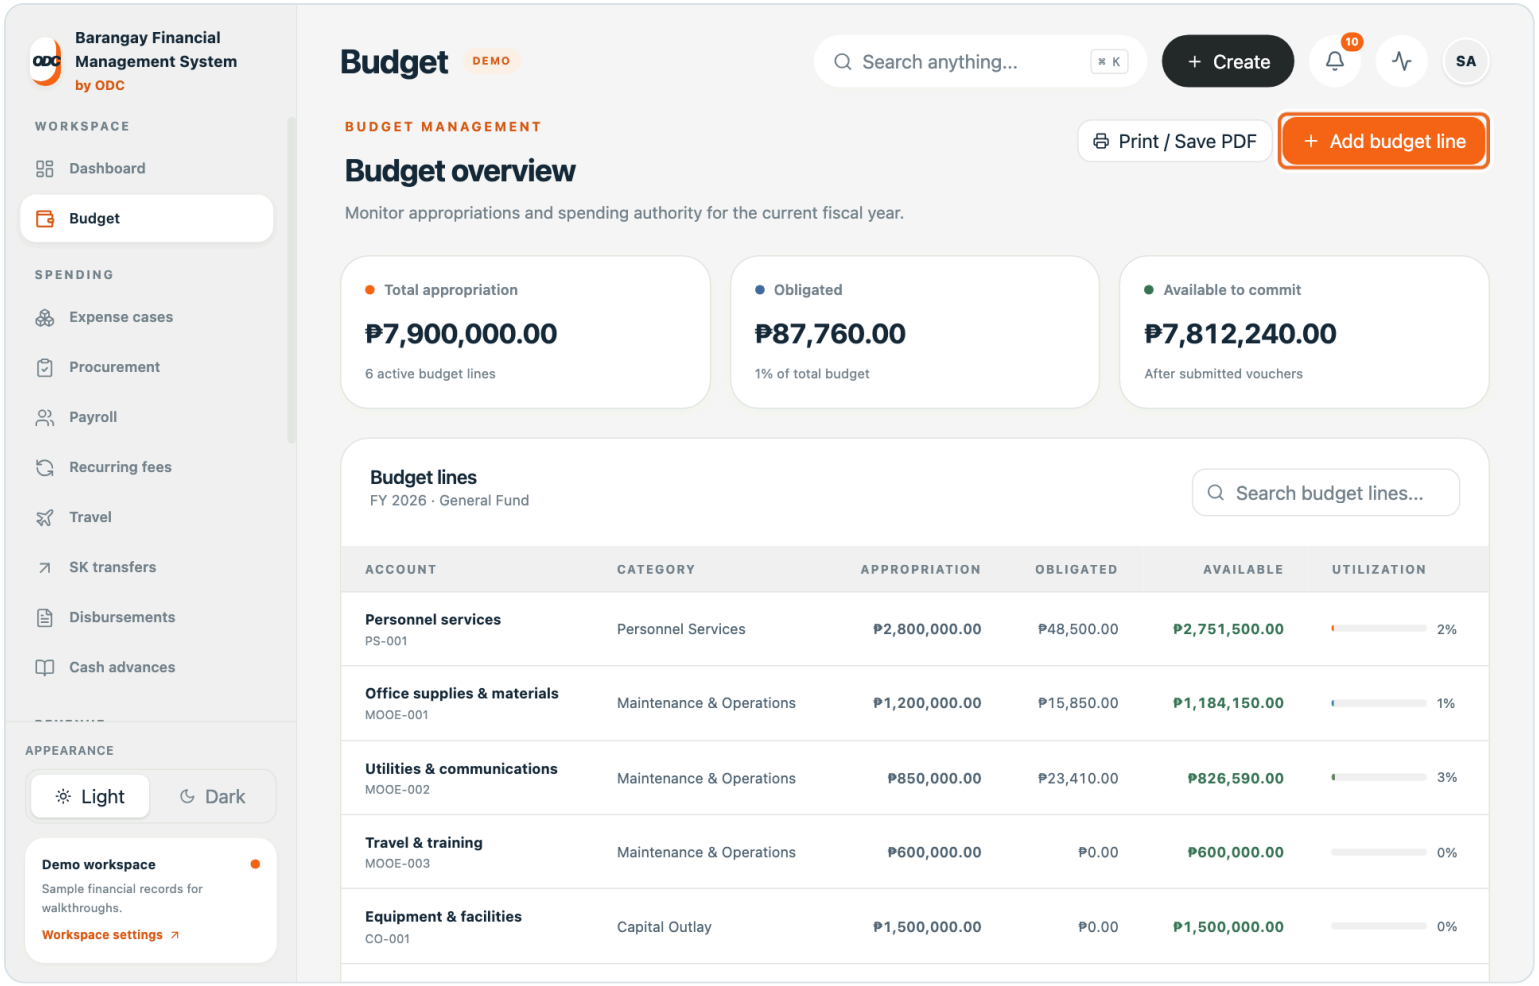

In this version, Submitted, Approved and Paid vouchers count as committed. Draft and Rejected vouchers do not. Paying a voucher does not restore its budget authority.

Budget is separate from cash

Adding a budget line does not create a collection or a bank balance. This screen is a simple appropriation register; annual approval, supplemental/continuing budgets and formal obligation management remain planned features.

Read the budget before entering an expense

Follow these steps in your workspace. Where shown, an orange outline marks the control to use.

Actual application capture · Super admin demo · 31 October 2026. Names, references and amounts are training examples. Open the image to zoom.

1. Open Budget and check the fiscal year.
2. Read Total appropriation, Obligated and Available to commit.
3. Find the intended budget line, then choose Add budget line if a new line is needed.

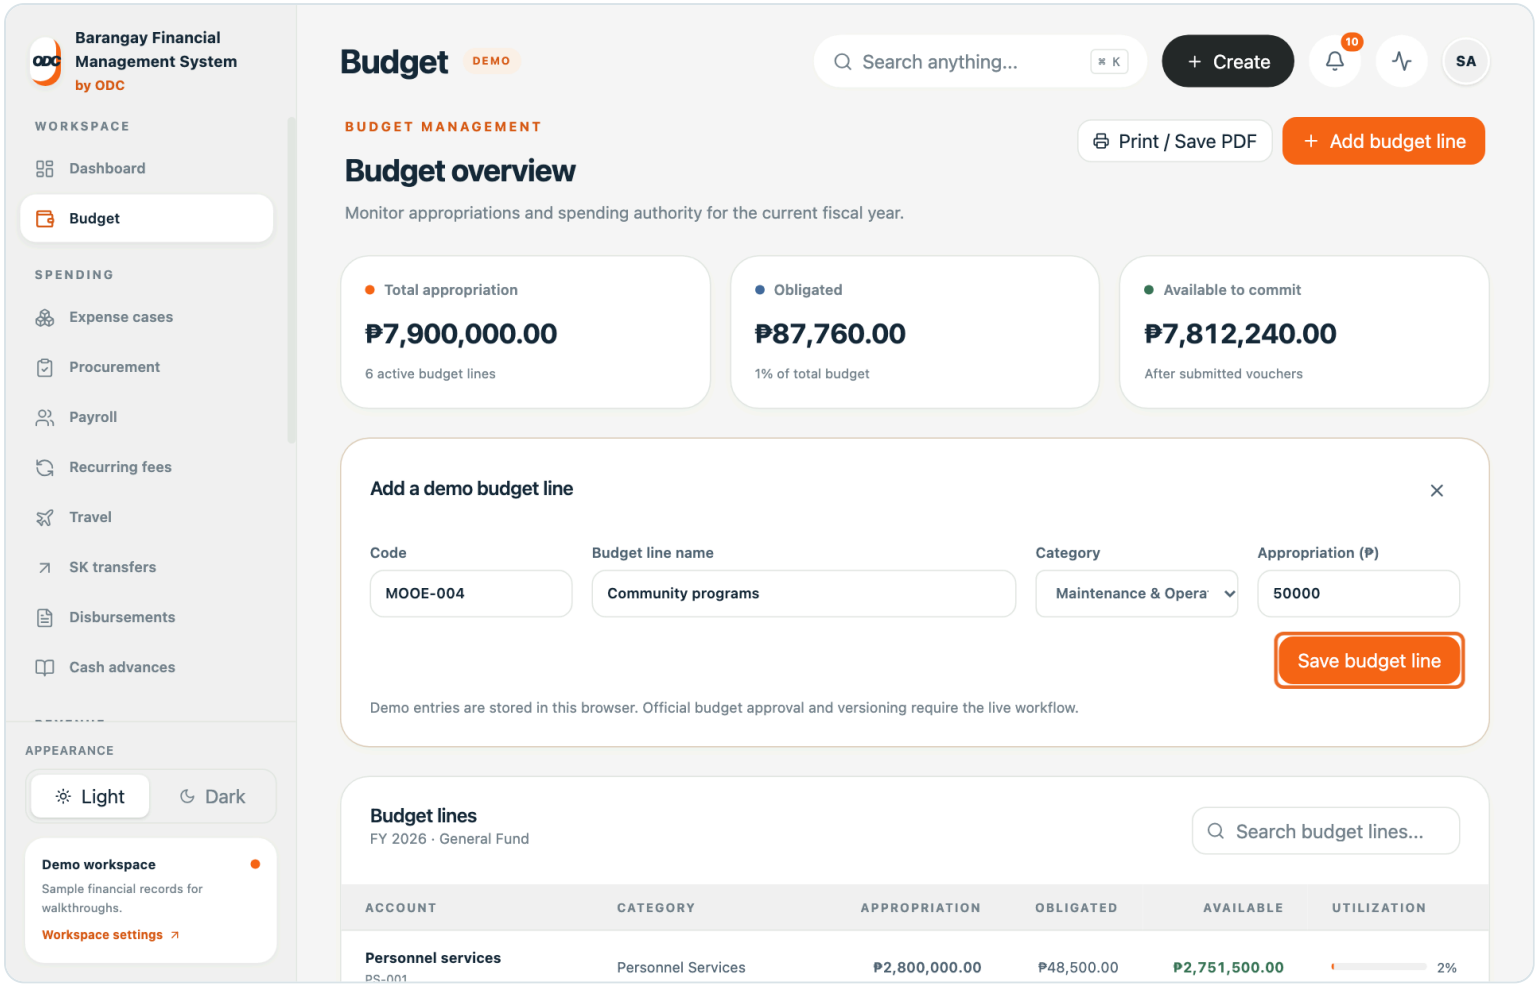

What you should see

Available to commit is the amount still available after submitted vouchers.

Next screen → **Workflow notes ↗**

Enter and save a budget line

Follow these steps in your workspace. Where shown, an orange outline marks the control to use.

Actual application capture · Super admin demo · 31 October 2026. Names, references and amounts are training examples. Open the image to zoom.

1. Enter a unique Code and a clear Budget line name.
2. Choose the Category and enter the appropriation in pesos. Example: 50000 means ₱50,000.00.
3. Choose Save budget line and confirm the line appears in Budget lines.

What you should see

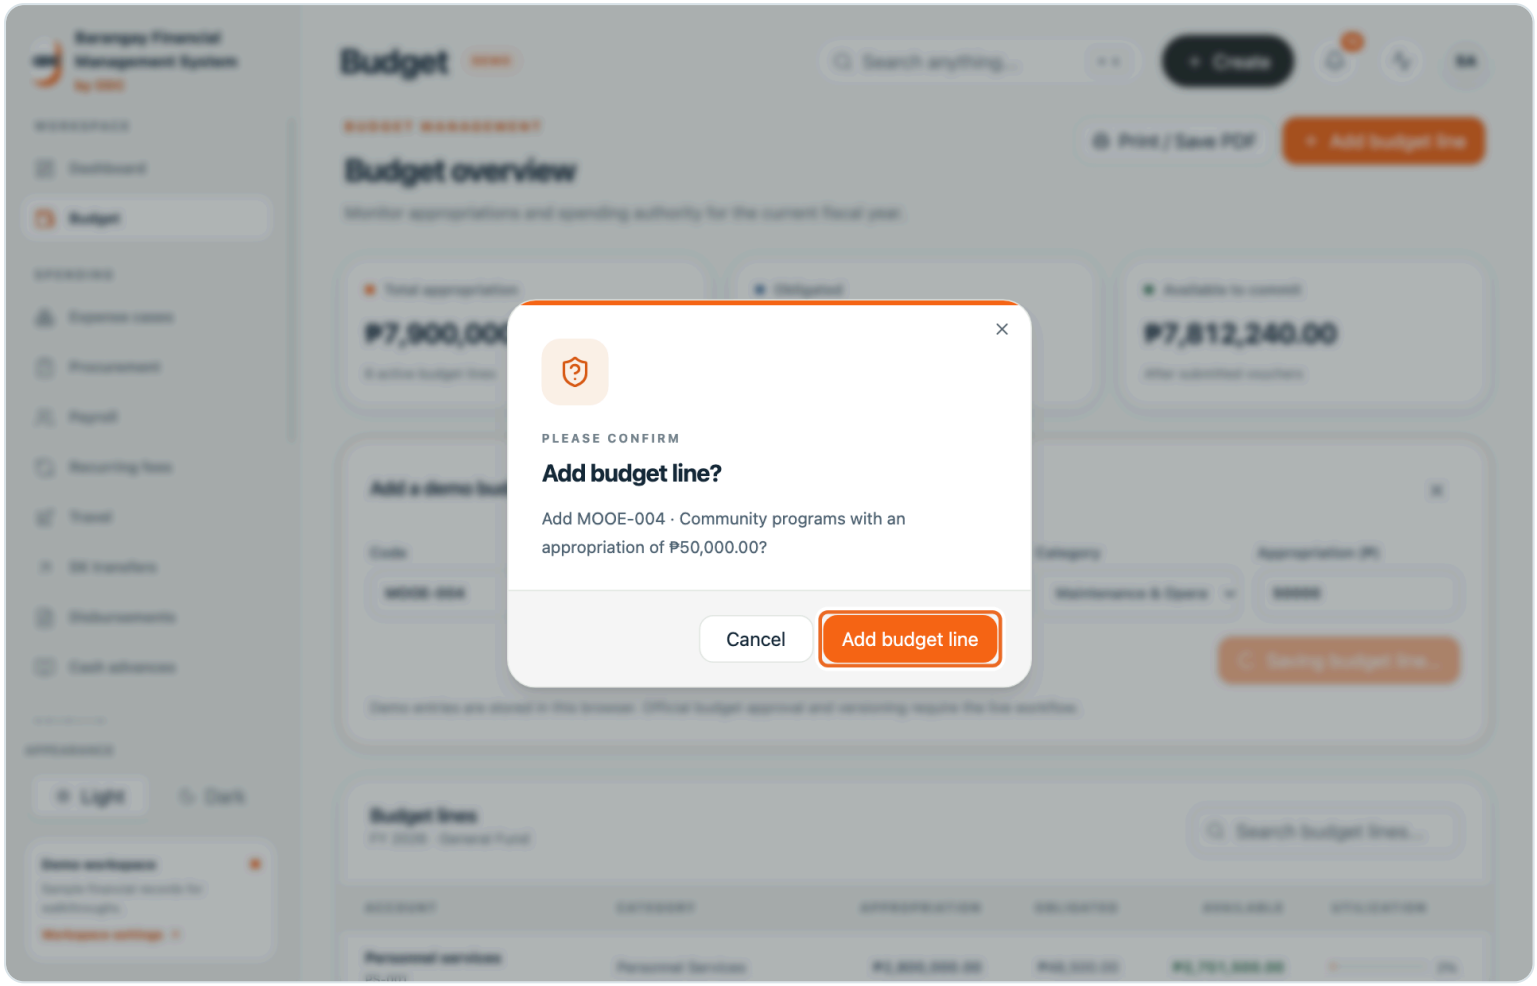

This example adds MOOE-004 / Community programs with ₱50,000.00.

← Previous screen Next screen →

Workflow notes ↗

Review the confirmation before saving

Follow these steps in your workspace. Where shown, an orange outline marks the control to use.

Actual application capture · Super admin demo · 31 October 2026. Names, references and amounts are training examples. Open the image to zoom.

1. Read the confirmation message before a record is saved or changed.
2. Check the code, name and amount. Choose Cancel to go back and correct a mistake.
3. Choose Add budget line to confirm. Similar confirmations appear for financial actions throughout the system.

What you should see

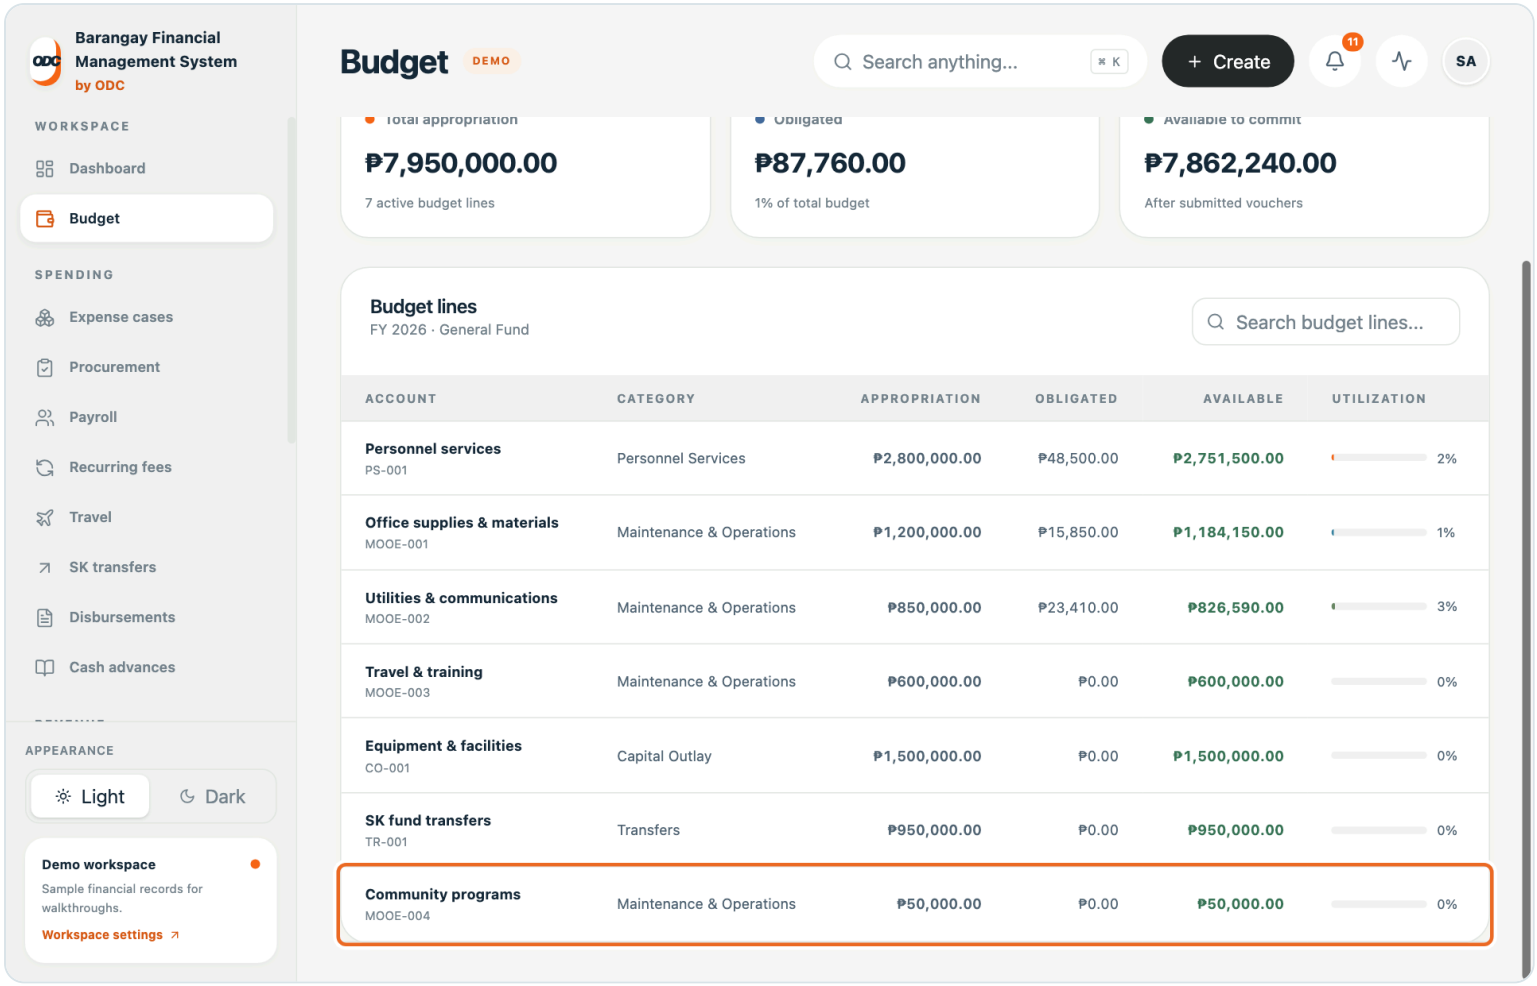

The action is applied only after you confirm the details.

← Previous screen Next screen →

Workflow notes ↗

Check the saved budget line

Follow these steps in your workspace. Where shown, an orange outline marks the control to use.

Actual application capture · Super admin demo · 31 October 2026. Names, references and amounts are training examples. Open the image to zoom.

1. Find MOOE-004 in Budget lines.
2. Verify the name, category and appropriation match your entry.
3. For a new unused line, its available amount should equal its appropriation.

What you should see

The saved line is ready to select when creating an expense case.

← Previous screen Workflow notes ↗

Move a purchase from PR to a linked DV.

Current live actor: Super admin · Intended staff owners: Encoder and Procurement officer · Screen: Procurement

See the actual screens → 6 illustrated steps

REQUEST
PR
Purchase Request

→

SOLICIT
RFQ
Request for Quotation

→

ORDER
PO
Purchase Order

→

ACCEPT
AIR
Acceptance and Inspection Report

→

PAYMENT PREP
Ready for DV
Create one linked voucher

01 **Choose New procurement**
Fill Payee / recipient, Amount, Purpose and Budget line. The expense type is already Procurement.

02 **Choose Create case**
Confirm the reference, amount and initial PR stage in the register.

03 **Advance the stage**
Choose Complete PR, Complete RFQ, Complete PO and Complete AIR in order. Each action moves the same case to the next stage.

04 **Choose Create DV**
This becomes available at Ready for DV. The voucher inherits the case's payee, purpose, amount and budget line.

05 **Choose View DV**
Open Disbursements and find the linked draft. Continue with Submit for review and independent approval.

Expected result

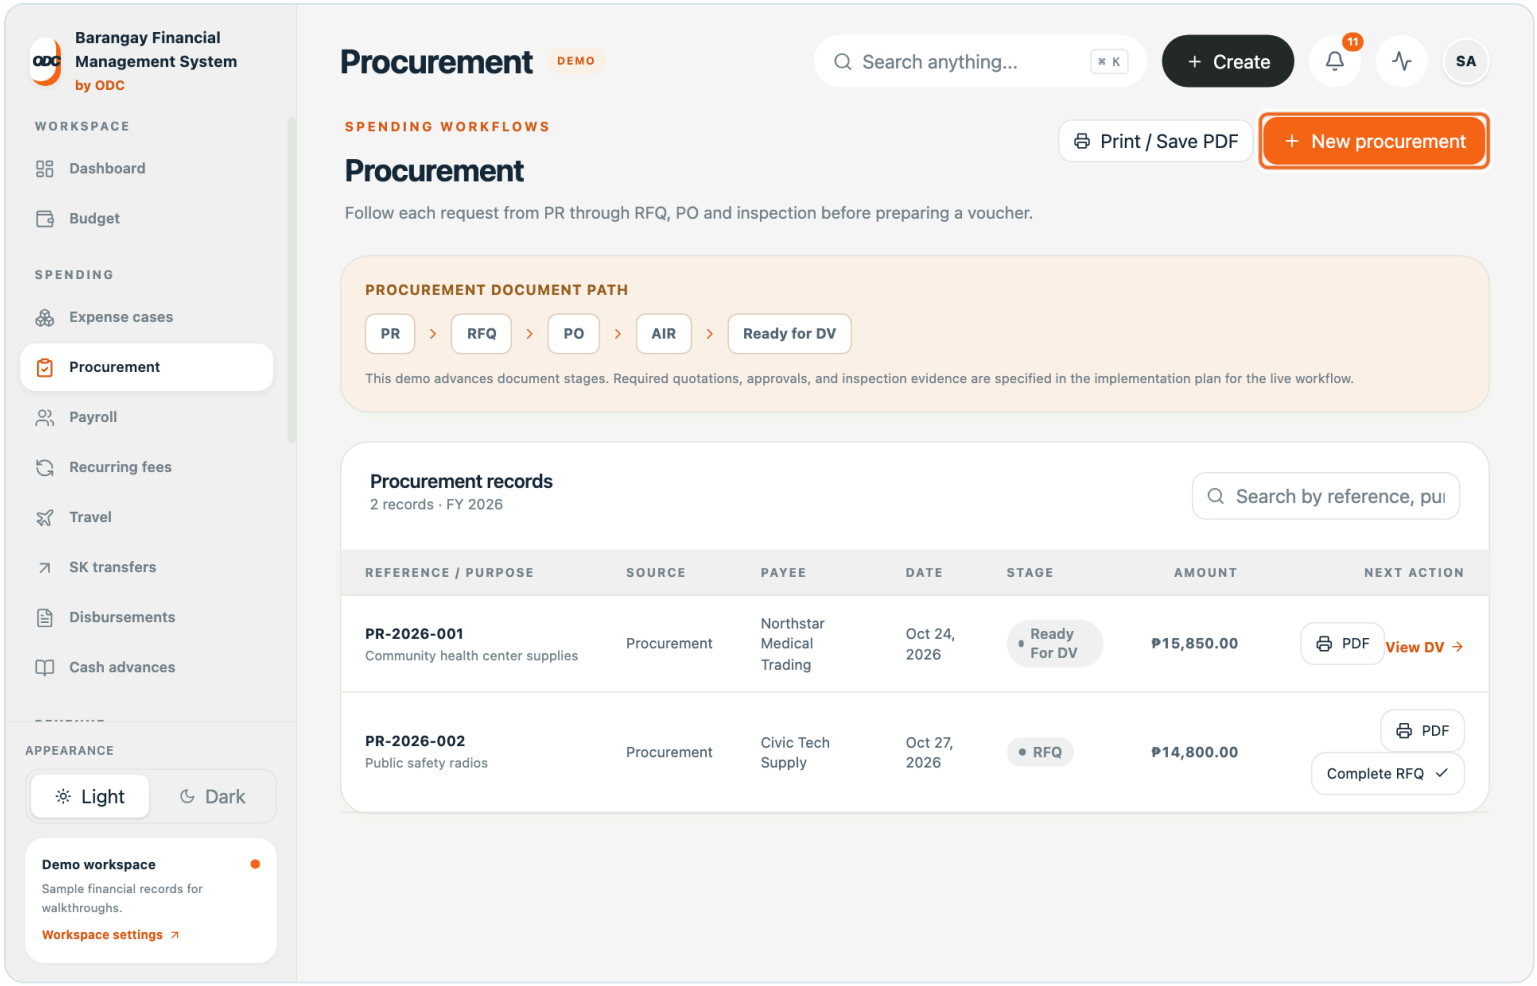

One purchase case is linked to one draft voucher. Once linked, its next action is View DV rather than creating another voucher.

What the stage buttons prove

The current interface tracks stages. It does not collect full quotations, award decisions, delivery quantities or inspection attachments. Keep the required supporting documents through your established process; those detailed screens remain planned.

Start a purchase request

Follow these steps in your workspace. Where shown, an orange outline marks the control to use.

Actual application capture · Super admin demo · 31 October 2026. Names, references and amounts are training examples. Open the image to zoom.

1. Open Procurement.
2. Use the document path to see PR → RFQ → PO → AIR → Ready for DV.
3. Choose New procurement to enter the purchase request.

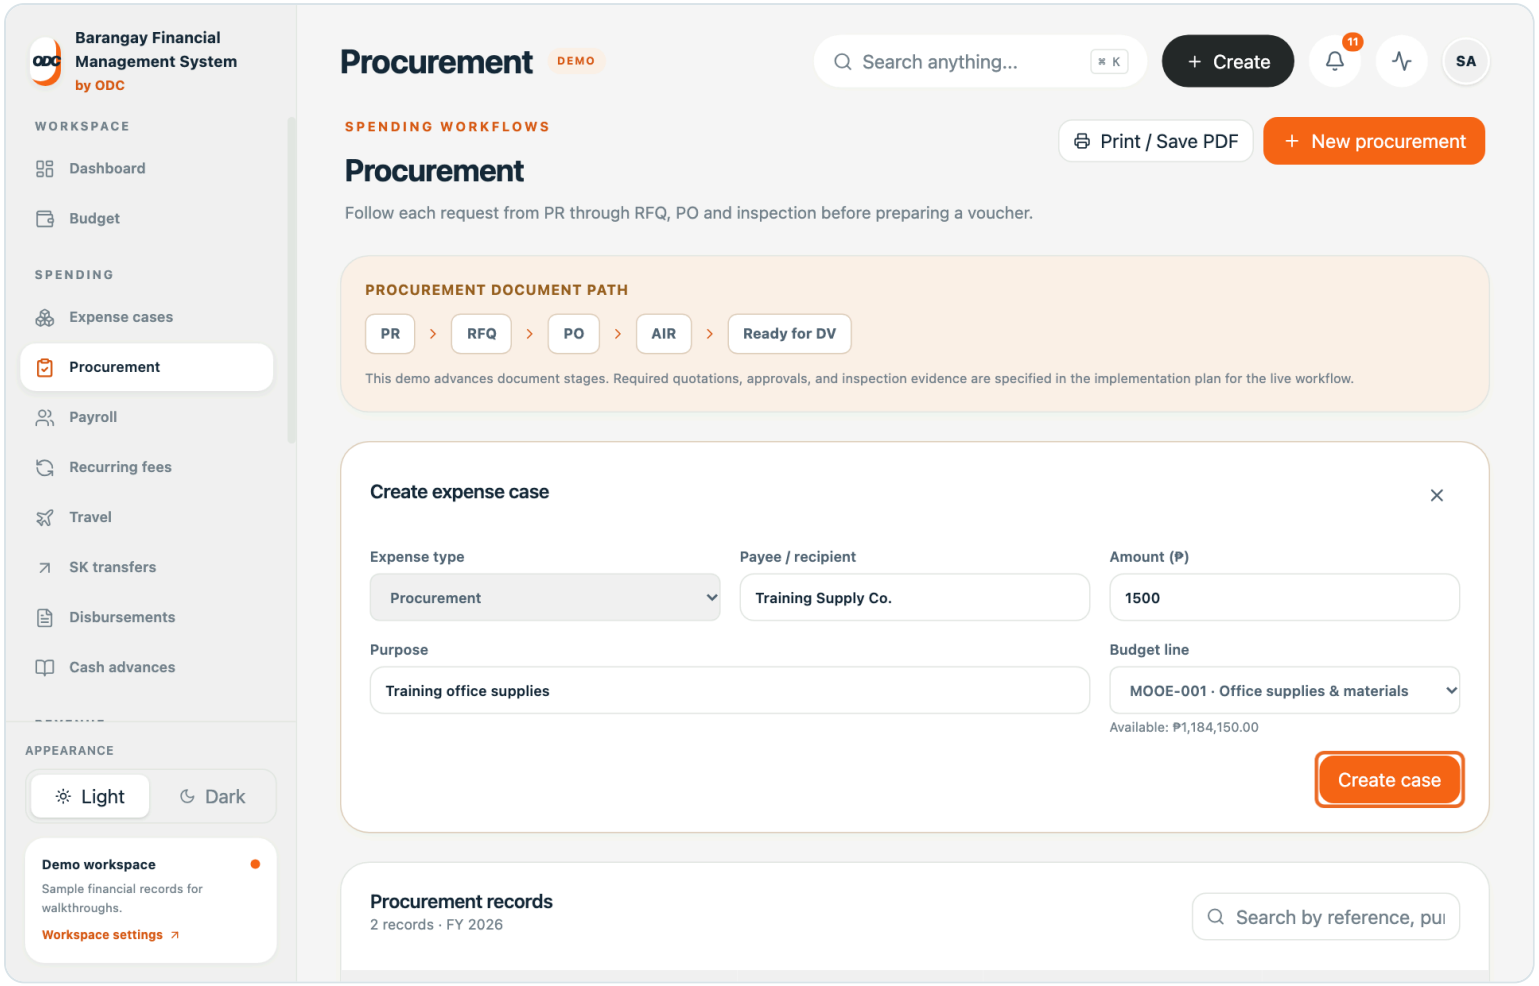

What you should see

Existing records show their current step and the next available action.

Next screen → **Workflow notes ↗**

Fill in the purchase request

Follow these steps in your workspace. Where shown, an orange outline marks the control to use.

Actual application capture · Super admin demo · 31 October 2026. Names, references and amounts are training examples. Open the image to zoom.

1. Enter the supplier or payee, amount and purpose.
2. Select the correct Budget line and check Available beneath it.
3. Choose Create case. This example requests ₱1,500.00 for training office supplies.

What you should see

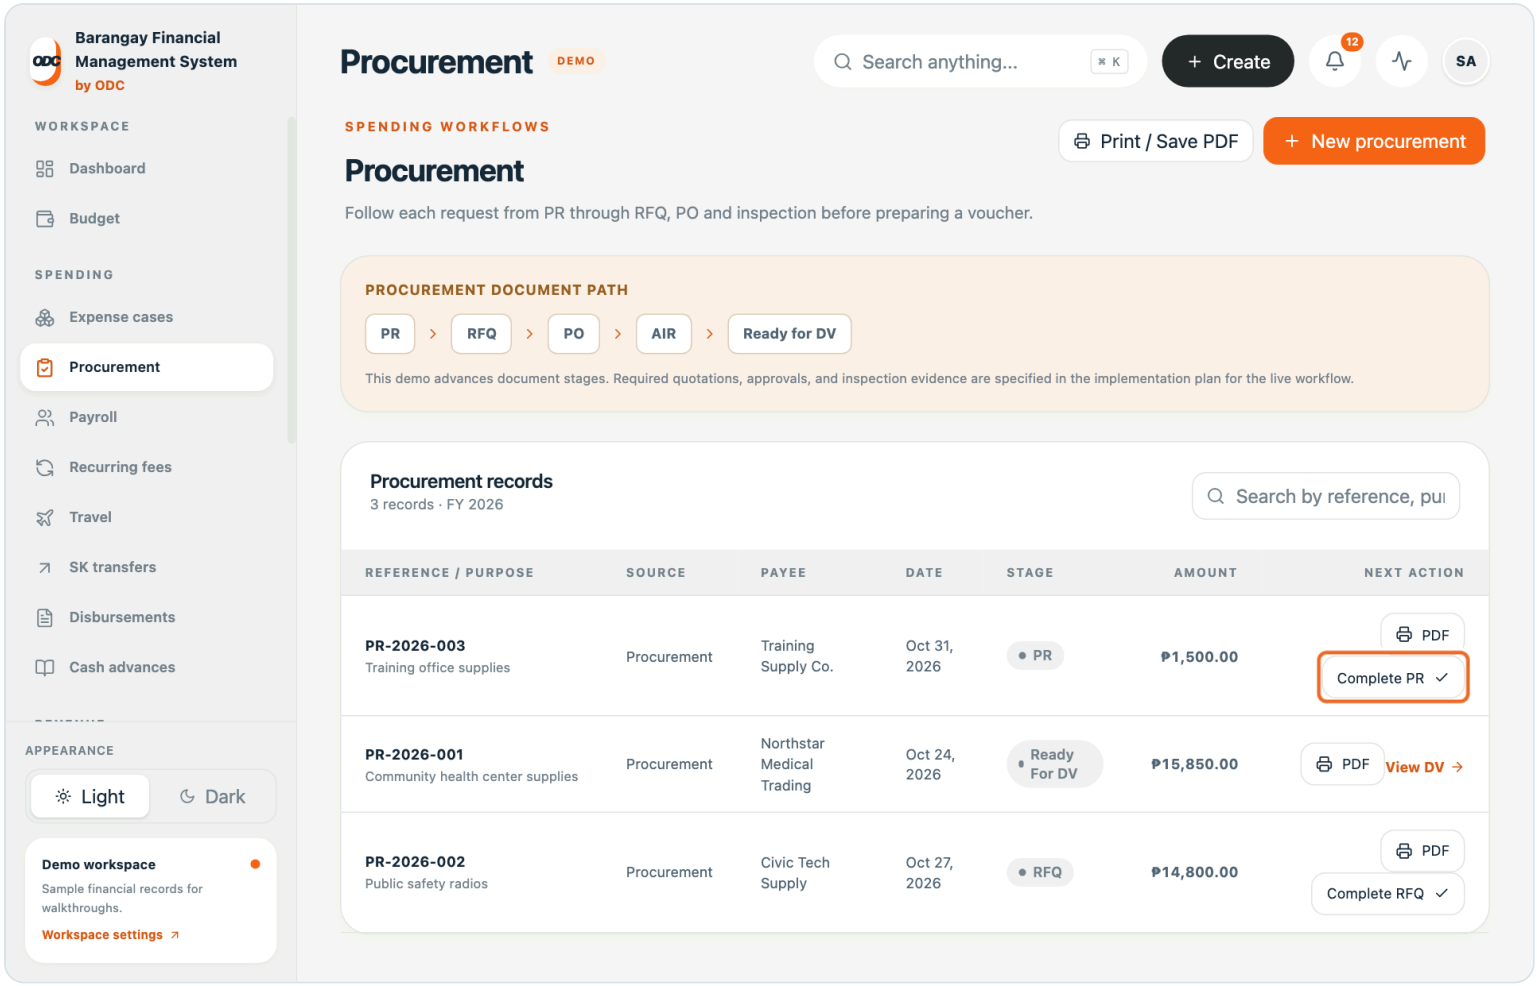

The request is saved at PR and appears in the procurement register.

← Previous screen Next screen →

Workflow notes ↗

Complete the PR stage

Follow these steps in your workspace. Where shown, an orange outline marks the control to use.

1. Find Training office supplies in the register.
2. Check its payee, amount and PR status.
3. Choose Complete PR after the corresponding work is complete.

What you should see

The next status is RFQ. Demo buttons illustrate the sequence; retain the required evidence in live operations.

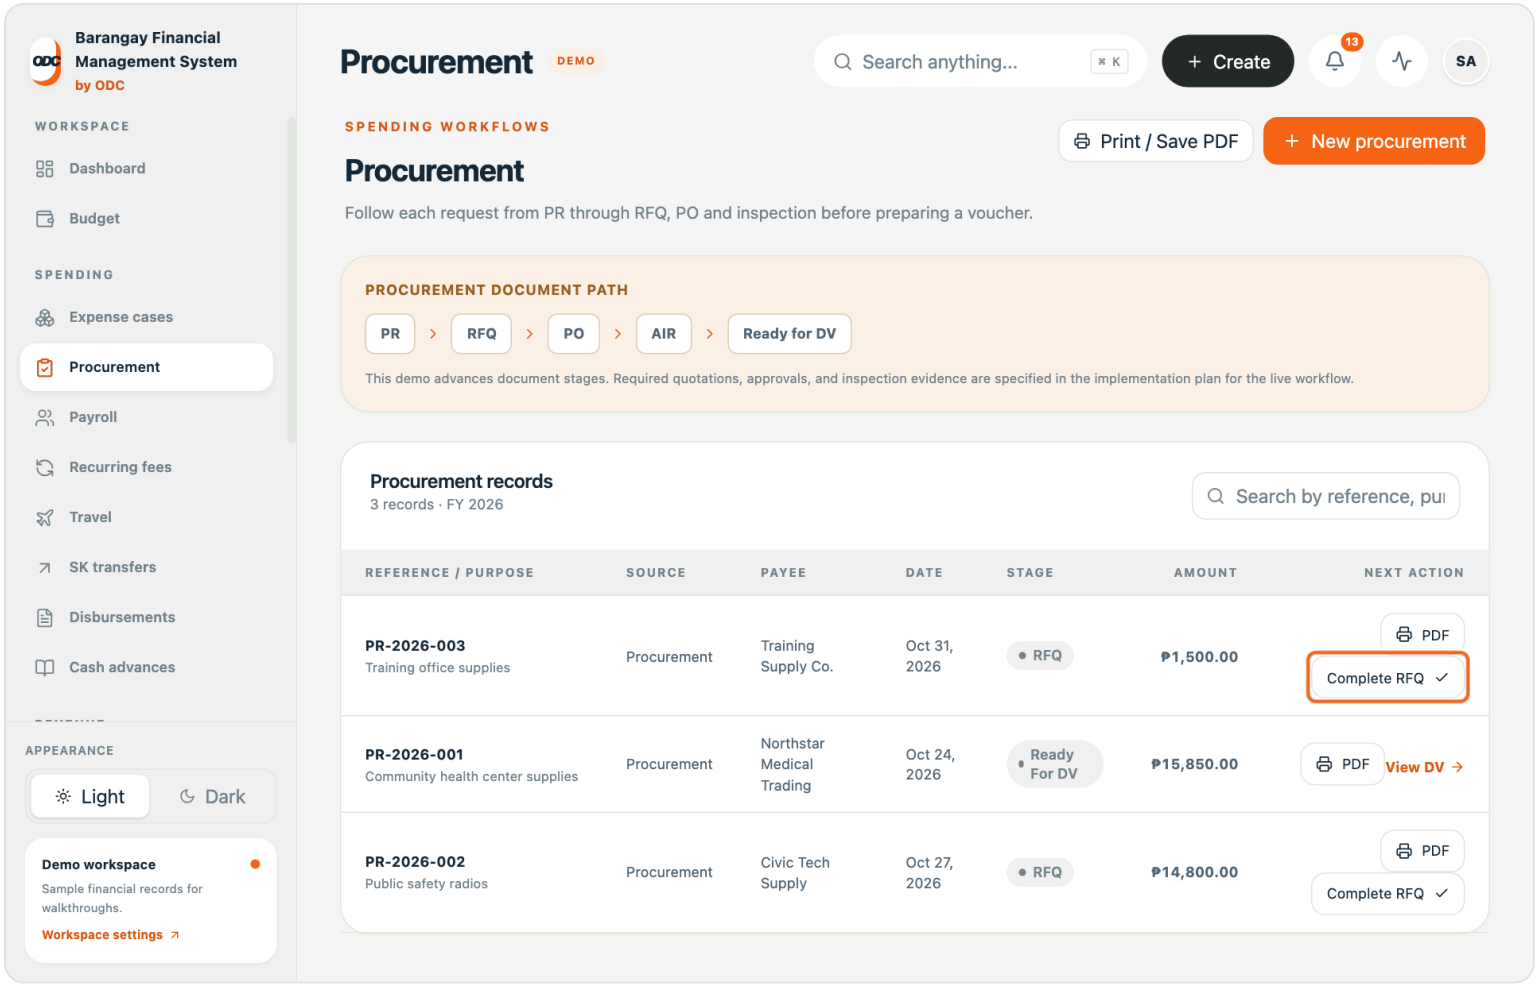

← Previous screen Next screen →

Workflow notes ↗

Actual application capture · Super admin demo · 31 October 2026. Names, references and amounts are training examples. Open the image to zoom.

Continue through quotations and purchase order

Follow these steps in your workspace. Where shown, an orange outline marks the control to use.

Actual application capture · Super admin demo · 31 October 2026. Names, references and amounts are training examples. Open the image to zoom.

1. The request now shows RFQ.
2. Complete the quotation work, then choose Complete RFQ on the same row.
3. At PO, complete the purchase order and choose Complete PO.

What you should see

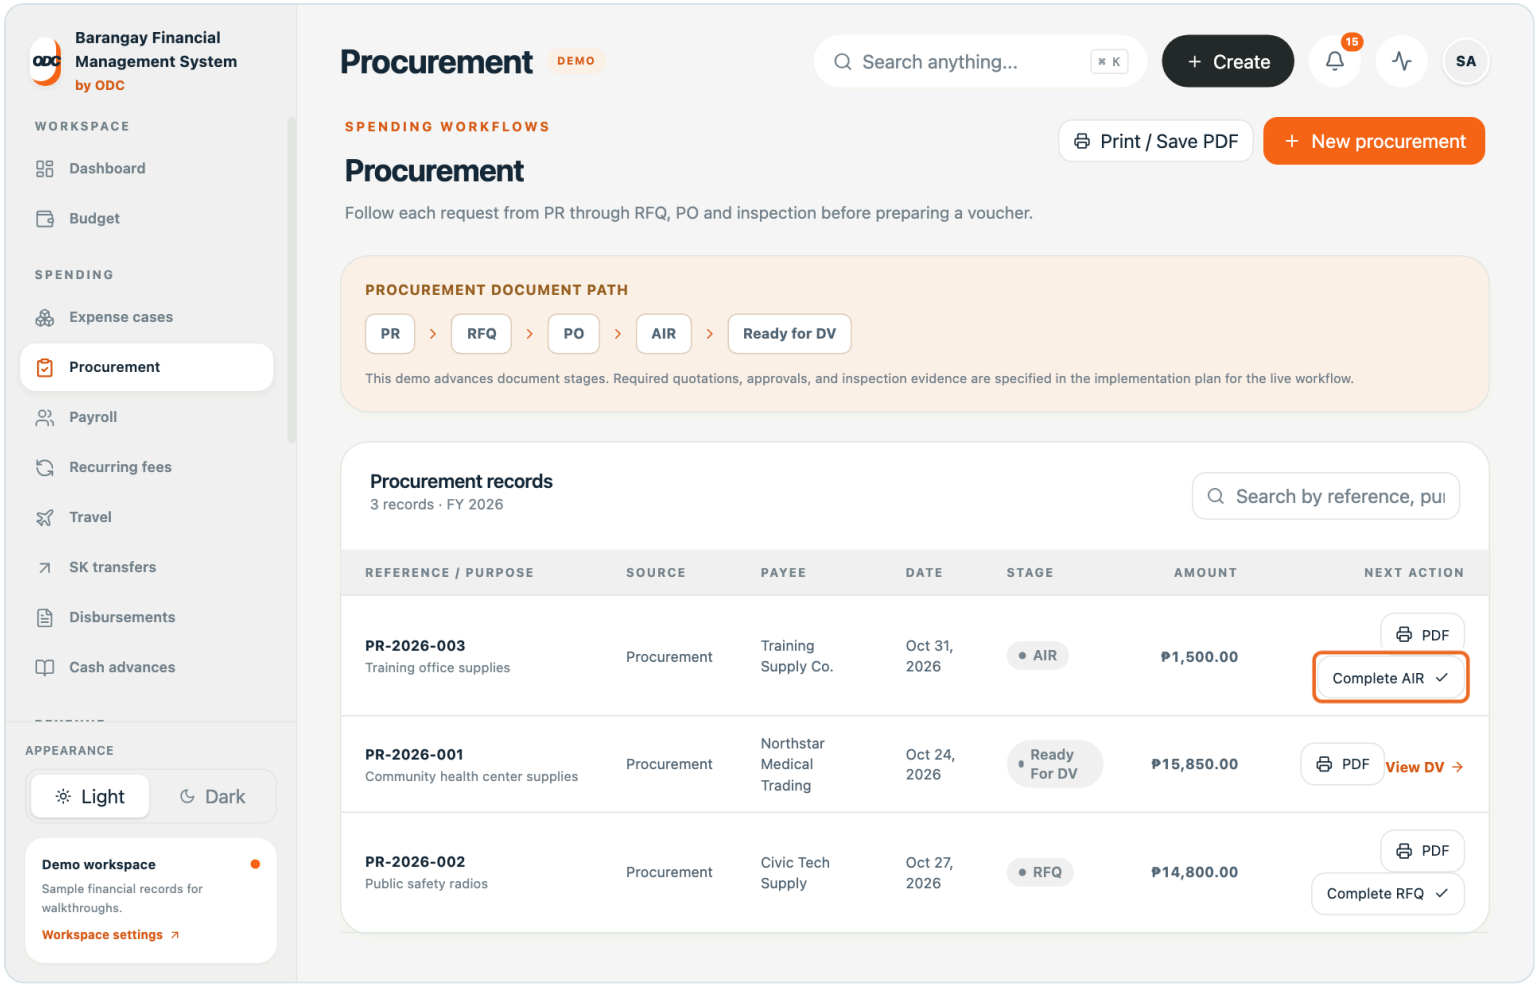

Each completed stage advances this same expense case; do not create a duplicate request.

← Previous screen Next screen →

Workflow notes ↗

Inspect before preparing the voucher

Follow these steps in your workspace. Where shown, an orange outline marks the control to use.

1. Confirm the case has reached AIR.
2. Complete the acceptance and inspection work.
3. Choose Complete AIR on the same request.

What you should see

The case becomes Ready for DV and its action changes to Create DV.

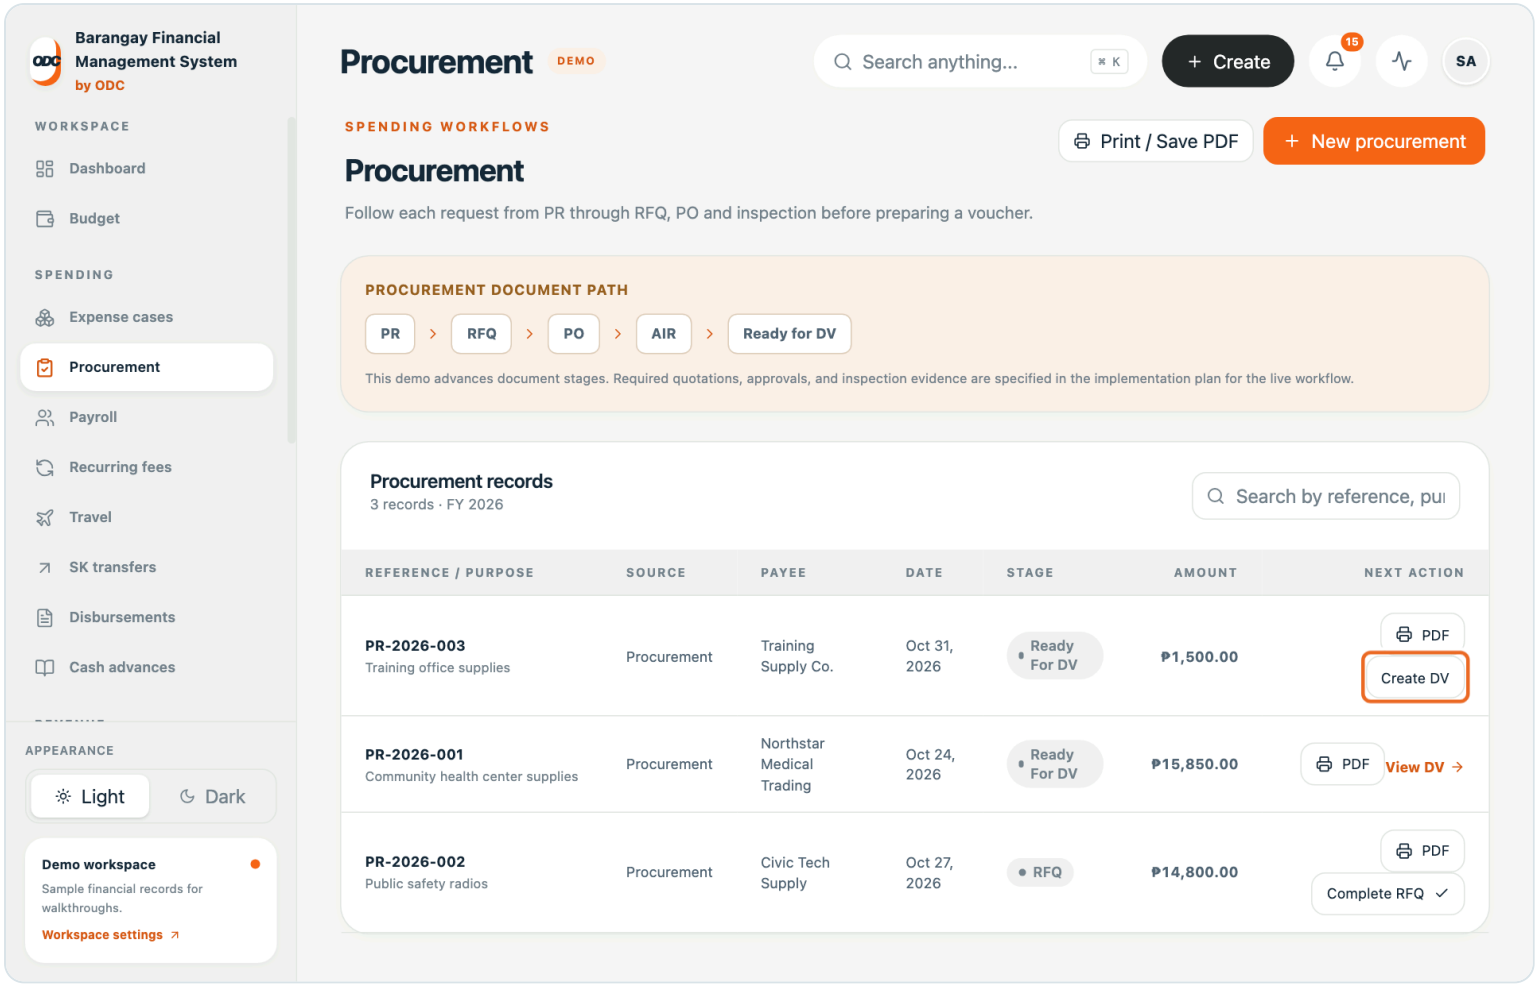

← Previous screen Next screen →

Workflow notes ↗

Actual application capture · Super admin demo · 31 October 2026. Names, references and amounts are training examples. Open the image to zoom.

Create the linked disbursement voucher

Follow these steps in your workspace. Where shown, an orange outline marks the control to use.

Actual application capture · Super admin demo · 31 October 2026. Names, references and amounts are training examples. Open the image to zoom.

1. Confirm the case is Ready for DV.
2. Choose Create DV once for this case.
3. Open Disbursements and locate the new draft by payee and purpose.

What you should see

The source case and draft voucher remain linked.

← Previous screen Workflow notes ↗

Four expense sources share the same voucher path.

Current live actor: Super admin · These routes use the same short expense-case form.

See the actual screens → 4 illustrated steps

Sidebar route	Enter in the current form	Prepare alongside the case; detailed fields are planned
Payroll	Payee, total amount, purpose / payroll period, budget line	Payroll breakdown, personnel, deductions and certifications
Recurring fees	Provider, bill amount, purpose / billing period, budget line	Bill, service account and payment evidence; no automatic scheduler
Travel	Accountable person / payee, amount, purpose, budget line	Travel order, itinerary and expense evidence; select advances only when applicable
SK transfers	Recipient, transfer amount, purpose, budget line	Transfer authority, recipient details and acknowledgement

1 / OPEN

Choose source route

Payroll / Recurring fees / Travel / SK transfers

→

2 / ENTER

New [source] → Create case

Complete the same five basic fields

→

3 / LINK

Ready for DV → Create DV

Non-procurement cases skip PR / RFQ / PO / AIR

→

4 / CONTINUE

Open Disbursements

Submit → approve or reject → payment

Travel has an optional next stage

After a travel DV is Paid, it can appear under Cash advances. Open an advance only if it represents money given to an accountable person, not every travel payment.

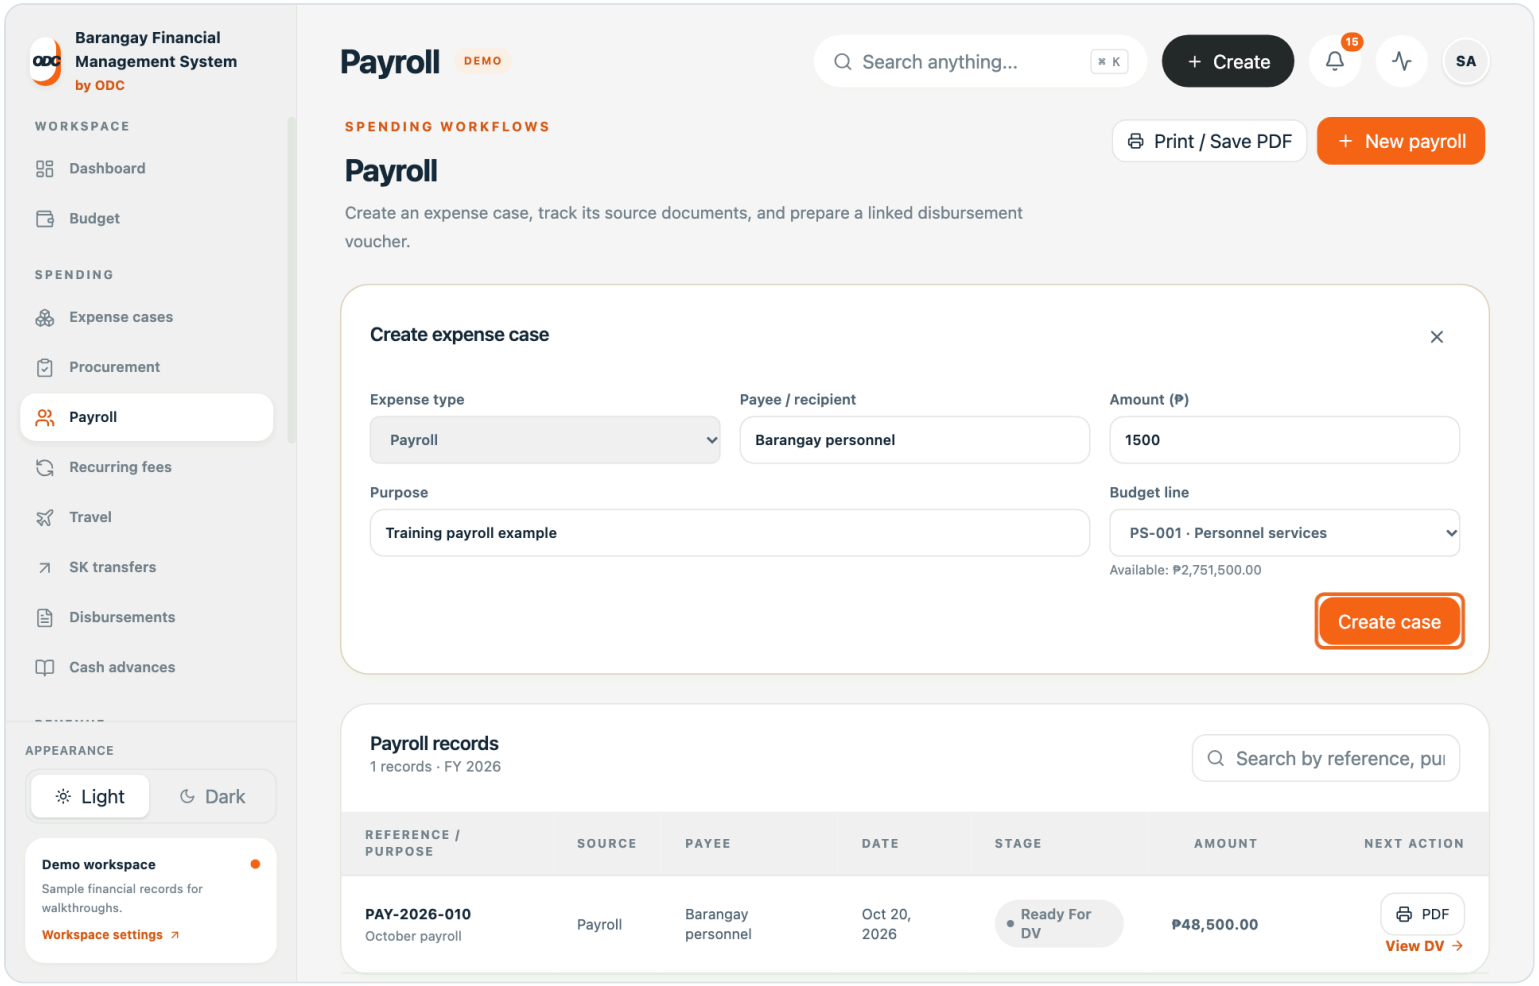

SK transfer stays identifiable

The source kind remains SK fund transfer. Recording this outgoing payment does not create a receipt in another entity's books.

Basis: workflows/[kind] page · expense-cases-view.tsx · create_expense_case function

Enter a payroll expense

Follow these steps in your workspace. Where shown, an orange outline marks the control to use.

Actual application capture · Super admin demo · 31 October 2026. Names, references and amounts are training examples. Open the image to zoom.

1. Open this expense route from the Spending sidebar and choose New.
2. Enter the payee, amount and purpose; select the matching budget line.
3. Choose Create case, then Create DV on the Ready for DV record. Continue in Disbursements.

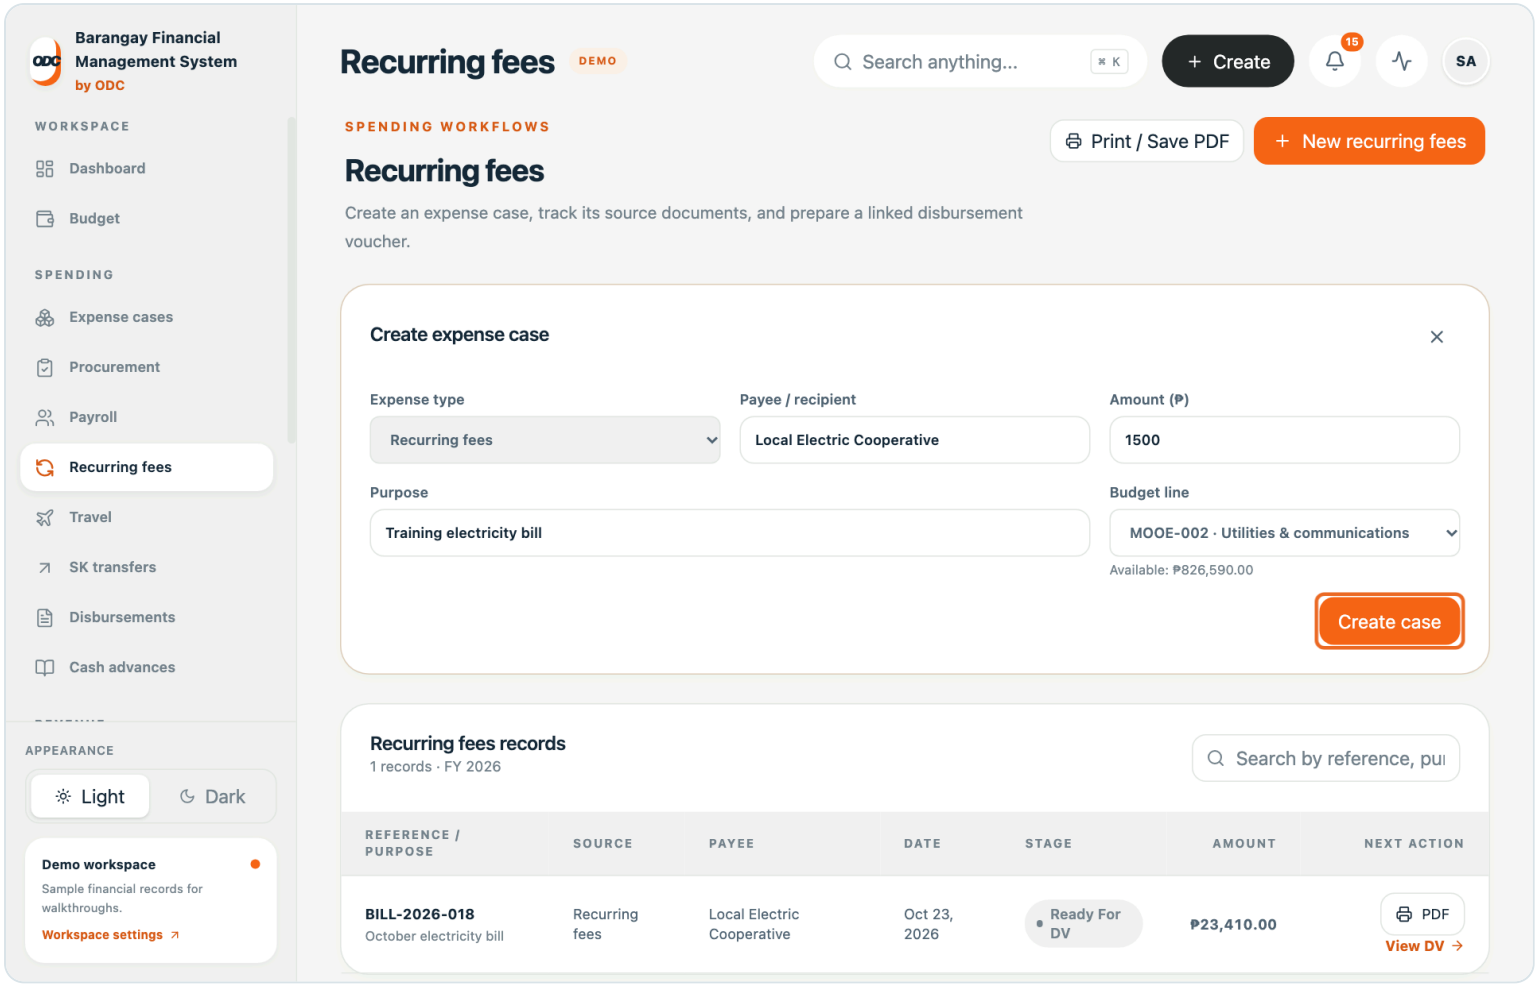

What you should see

These routes use the same linked voucher review and payment steps as procurement.

Next screen → **Workflow notes ↗**

Enter a recurring fee expense

Follow these steps in your workspace. Where shown, an orange outline marks the control to use.

Actual application capture · Super admin demo · 31 October 2026. Names, references and amounts are training examples. Open the image to zoom.

1. Open this expense route from the Spending sidebar and choose New.
2. Enter the payee, amount and purpose; select the matching budget line.
3. Choose Create case, then Create DV on the Ready for DV record. Continue in Disbursements.

What you should see

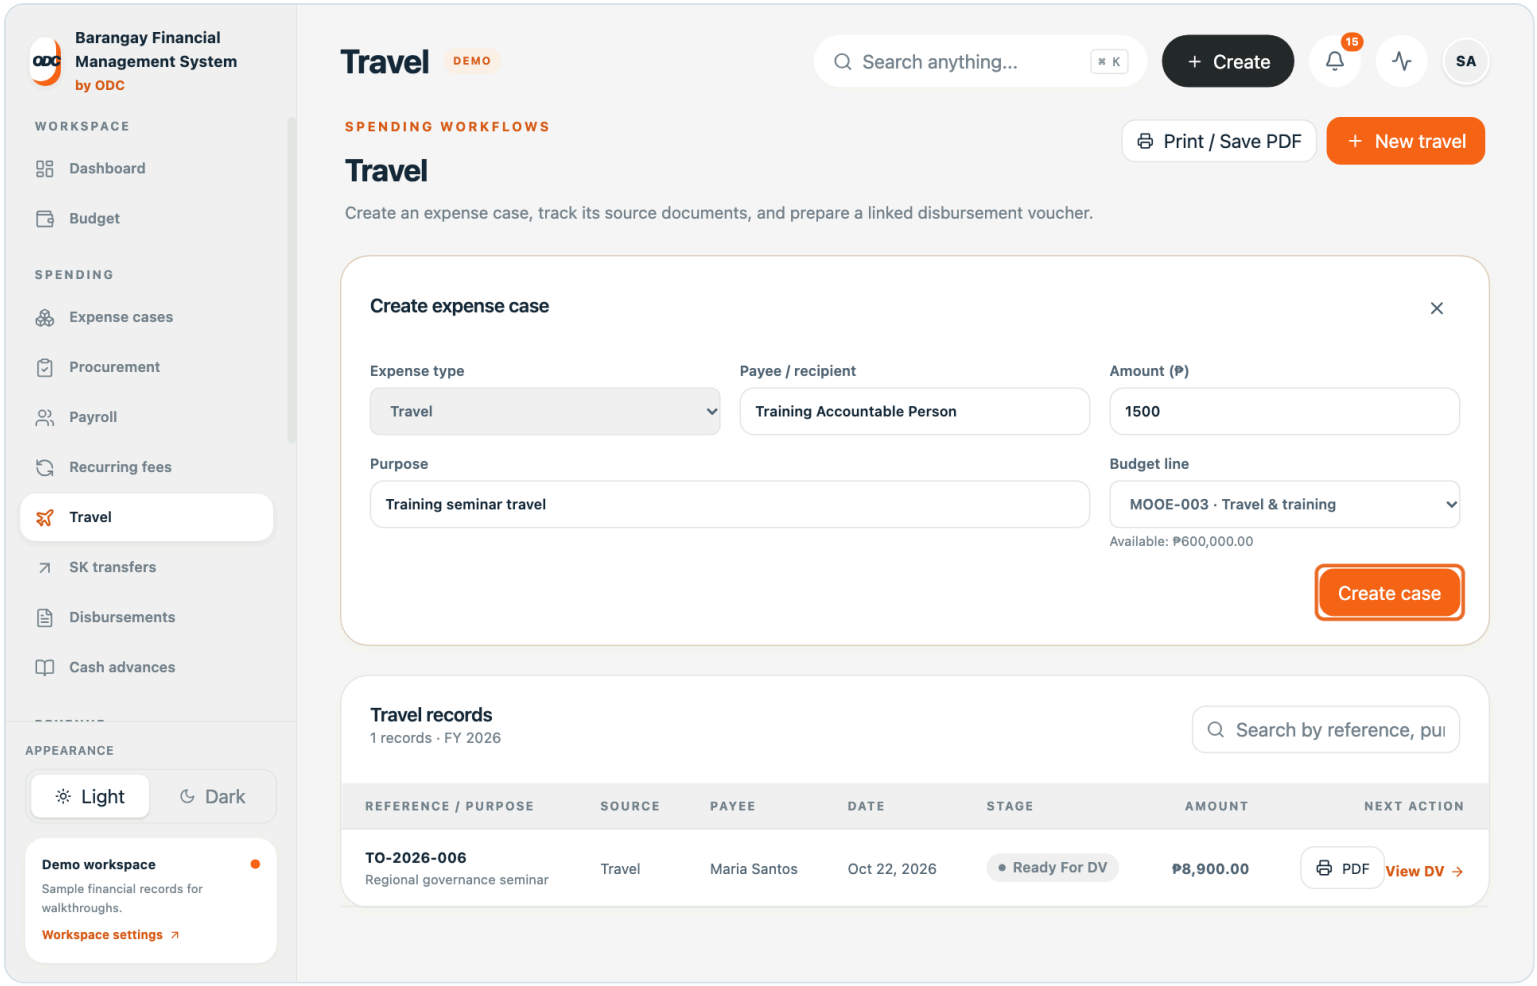

These routes use the same linked voucher review and payment steps as procurement.

← Previous screen Next screen →

Workflow notes ↗

Enter a travel expense

Follow these steps in your workspace. Where shown, an orange outline marks the control to use.

Actual application capture · Super admin demo · 31 October 2026. Names, references and amounts are training examples. Open the image to zoom.

1. Open this expense route from the Spending sidebar and choose New.
2. Enter the payee, amount and purpose; select the matching budget line.
3. Choose Create case, then Create DV on the Ready for DV record. Continue in Disbursements.

What you should see

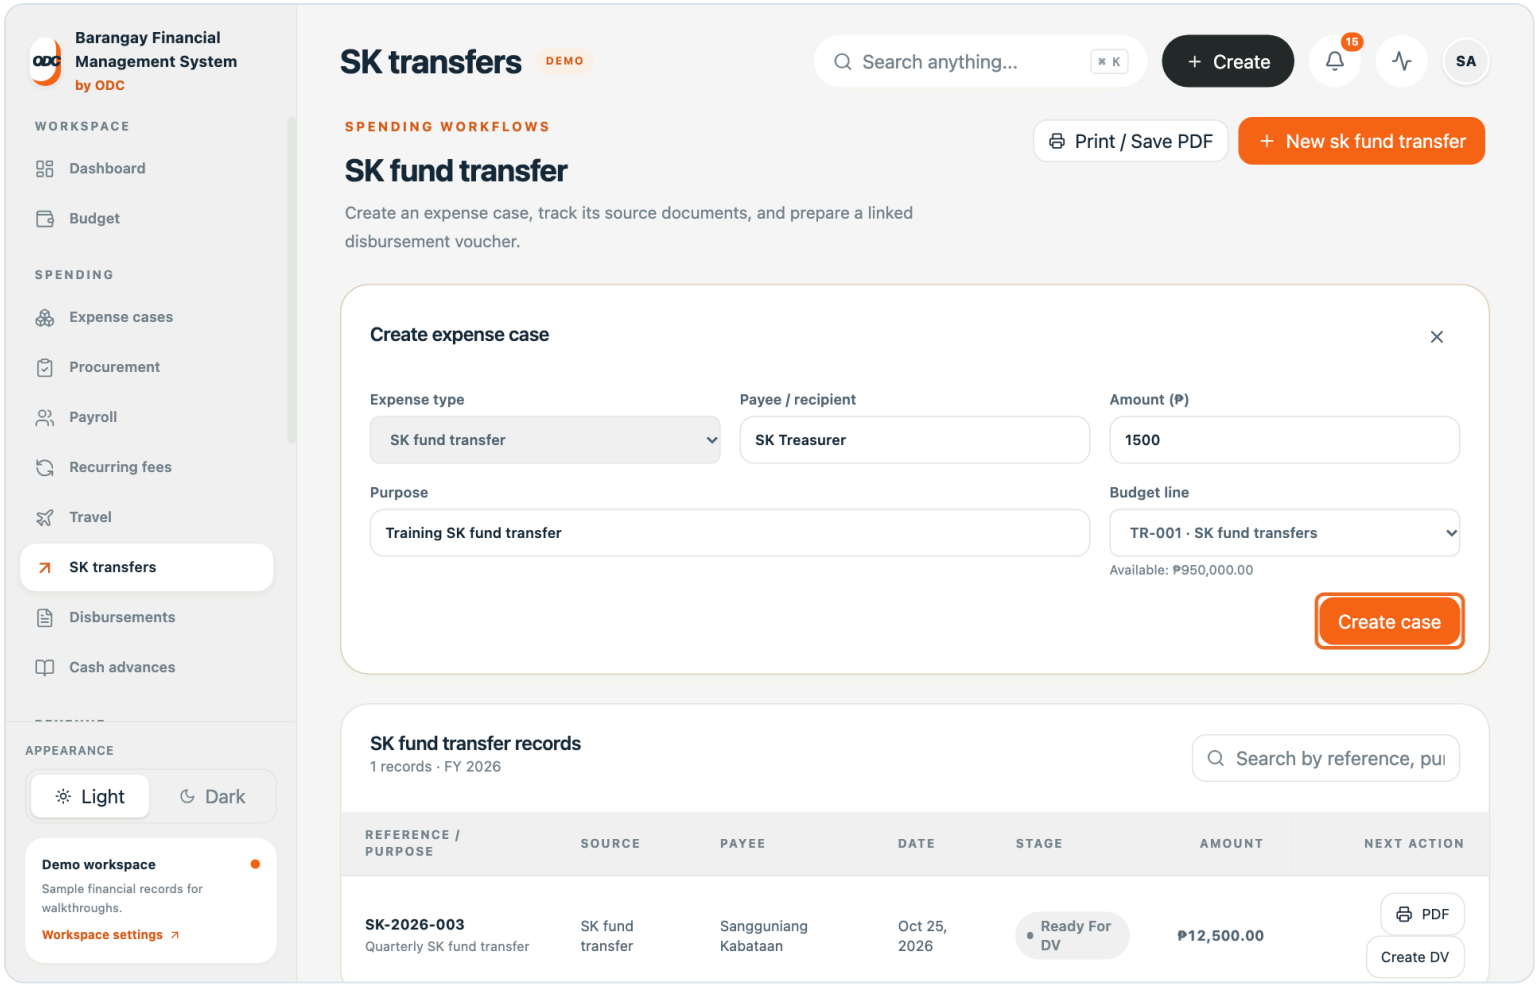

If the paid travel voucher represents a cash advance, continue to Cash advances after payment.

← Previous screen Next screen →

Workflow notes ↗

Enter a SK transfer expense

Follow these steps in your workspace. Where shown, an orange outline marks the control to use.

Actual application capture · Super admin demo · 31 October 2026. Names, references and amounts are training examples. Open the image to zoom.

1. Open this expense route from the Spending sidebar and choose New.
2. Enter the payee, amount and purpose; select the matching budget line.
3. Choose Create case, then Create DV on the Ready for DV record. Continue in Disbursements.

What you should see

These routes use the same linked voucher review and payment steps as procurement.

← Previous screen Workflow notes ↗

Create, submit, approve and pay a voucher.

Live: Super admin prepares/submits; assigned Approver decides; assigned Treasurer records payment · Screen: Disbursements

See the actual screens → 7 illustrated steps

Draft → Submitted → Approved → Paid

Submitted can also become Rejected.

01 **Open the draft voucher**

From its source case choose View DV, or search Disbursements by number, payee or purpose. Click the row to open its detail panel.

02 **Review the linked details**

Check payee, amount, purpose, source document and budget line against the supporting records.

03 **Submit for review**

The creator selects Submit for review. Insufficient available appropriation blocks submission.

04 **Review as assigned Approver or Super admin**

An assigned Approver reviews the Submitted voucher and chooses Approve or Reject. Ordinary self-approval is blocked; Super admin self-approval is audited.

05 **Record the payment**

For an Approved voucher, enter Check / payment reference → Record payment. The current app records the full voucher amount.

06 **Verify completion**

Confirm Paid and the saved payment reference. Check the report previews and, where authorized, the Audit trail.

Rejected voucher

The current interface has no Return / edit / resubmit workflow. Keep the rejected record. If a corrected request is authorized, create a new expense case and linked DV.

Payment recording

Record payment saves the transaction and its reference. It does not initiate a bank transfer or issue a physical check.

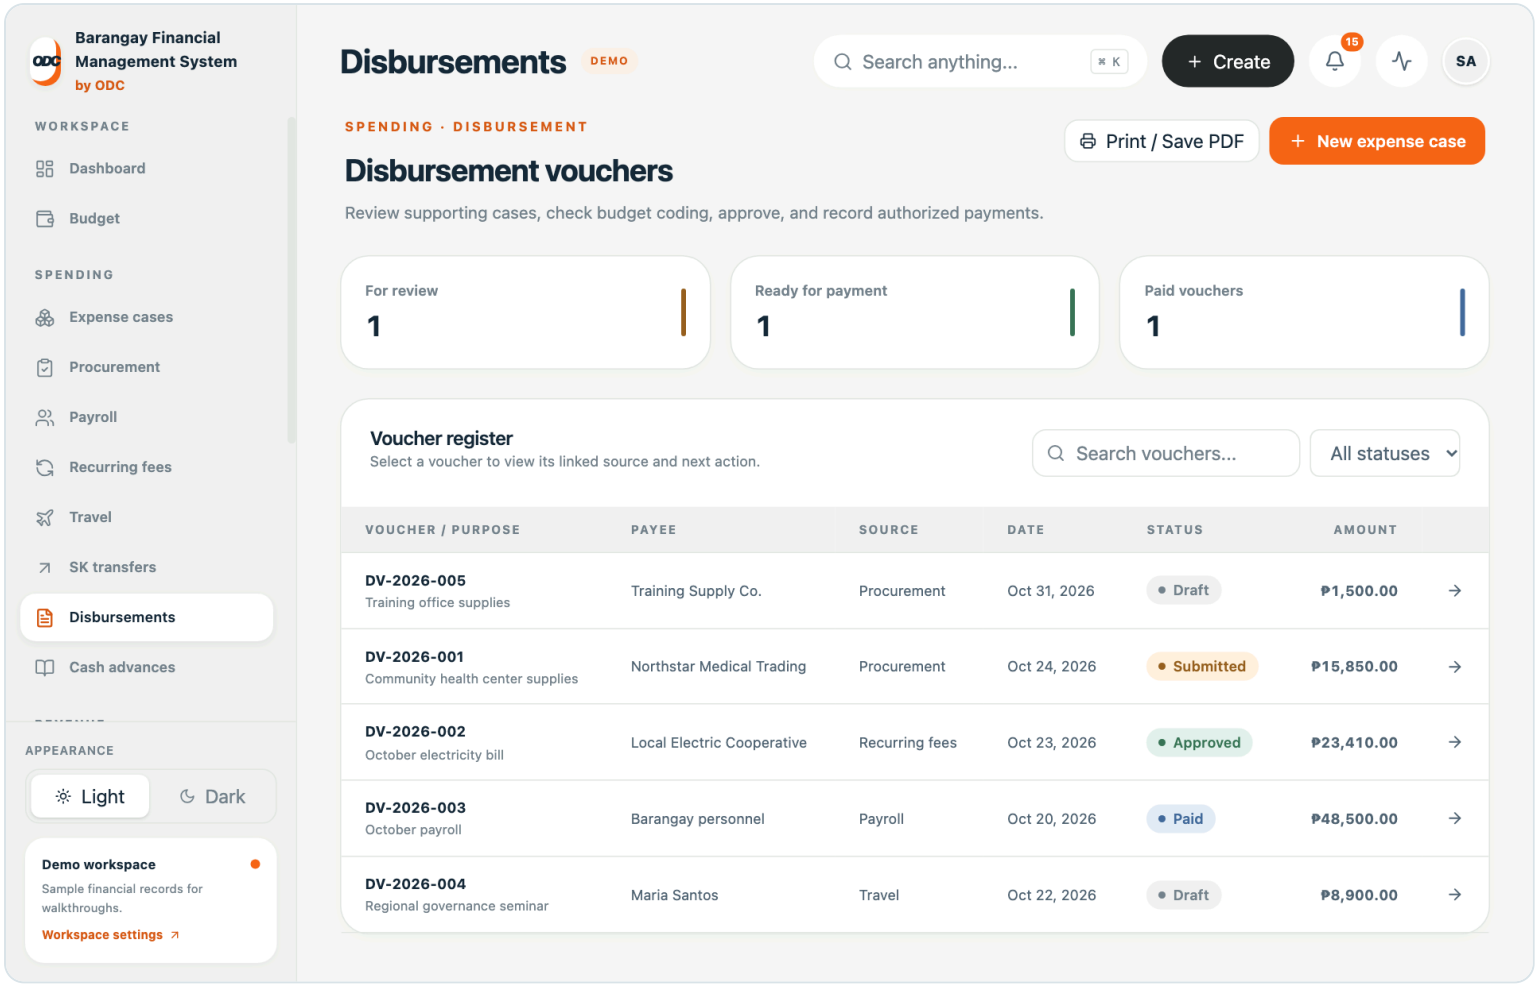

Trace every support/test action

Audit events retain actor, barangay, action and time. Super admin events identify the access level; self-approvals also record the creator and override.

Basis: disbursements-view.tsx · finance API · submit_voucher / approve_voucher / record_payment

Find the draft voucher

Follow these steps in your workspace. Where shown, an orange outline marks the control to use.

Actual application capture · Super admin demo · 31 October 2026. Names, references and amounts are training examples. Open the image to zoom.

1. Open Disbursements.
2. Search by payee, purpose or voucher number, and use the status filter if needed.
3. Select the Training Supply Co. voucher row to open the linked voucher panel.

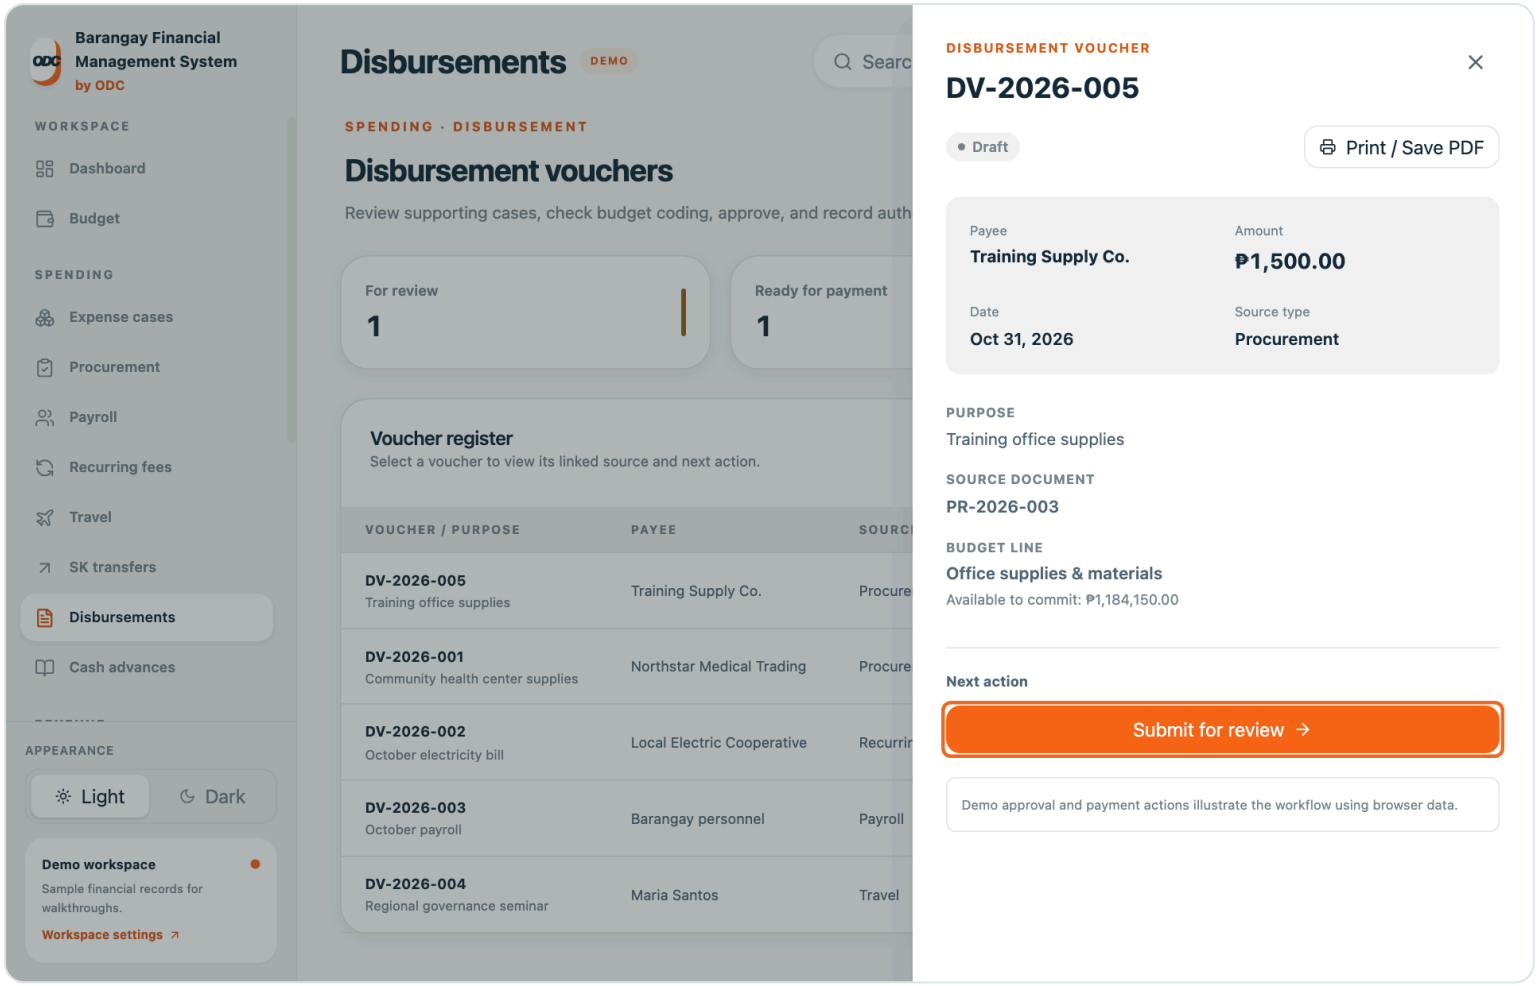

What you should see

Draft, submitted, approved and paid vouchers appear in the same register.

Next screen → **Workflow notes ↗**

Check the draft and submit it

Follow these steps in your workspace. Where shown, an orange outline marks the control to use.

Actual application capture · Super admin demo · 31 October 2026. Names, references and amounts are training examples. Open the image to zoom.

1. Review the payee, amount, purpose, source document and budget line in the voucher panel.
2. Confirm the source case is the intended purchase request.
3. Choose Submit for review.

What you should see

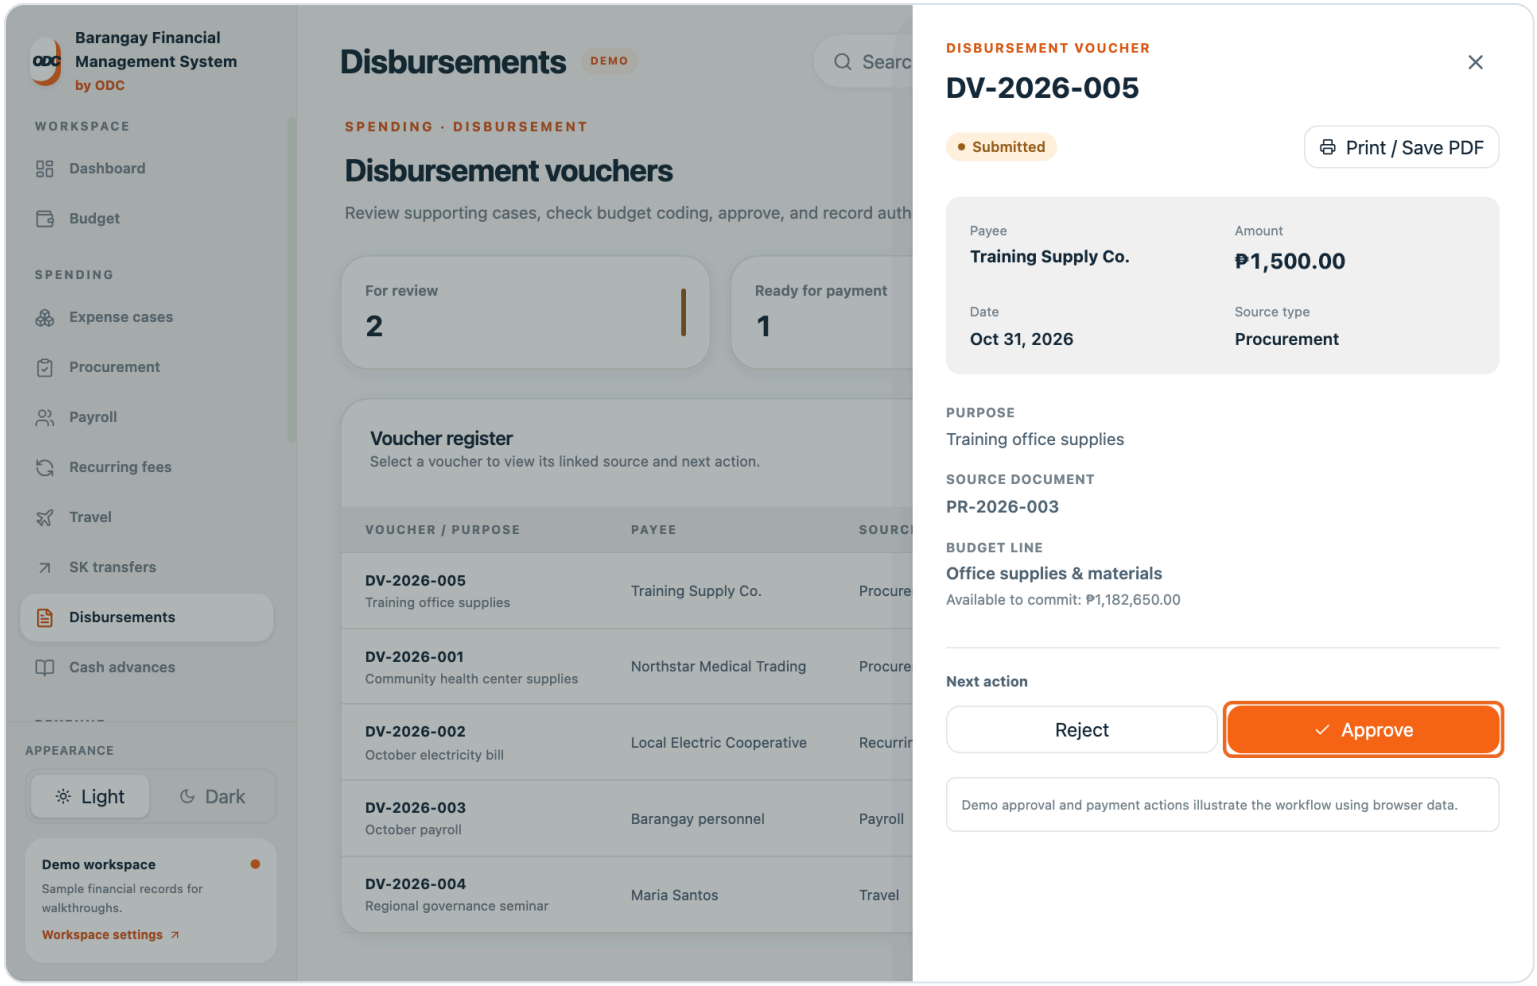

The voucher changes from draft to submitted and commits budget availability.

← Previous screen Next screen →

Workflow notes ↗

Review and approve the submitted voucher

Follow these steps in your workspace. Where shown, an orange outline marks the control to use.

Actual application capture · Super admin demo · 31 October 2026. Names, references and amounts are training examples. Open the image to zoom.

1. Check the submitted voucher and its supporting records.
2. Choose Approve when correct, or Reject when a correction is needed.
3. In live mode, an assigned Approver in this barangay or a Super admin can approve/reject. Ordinary self-approval is blocked.

What you should see

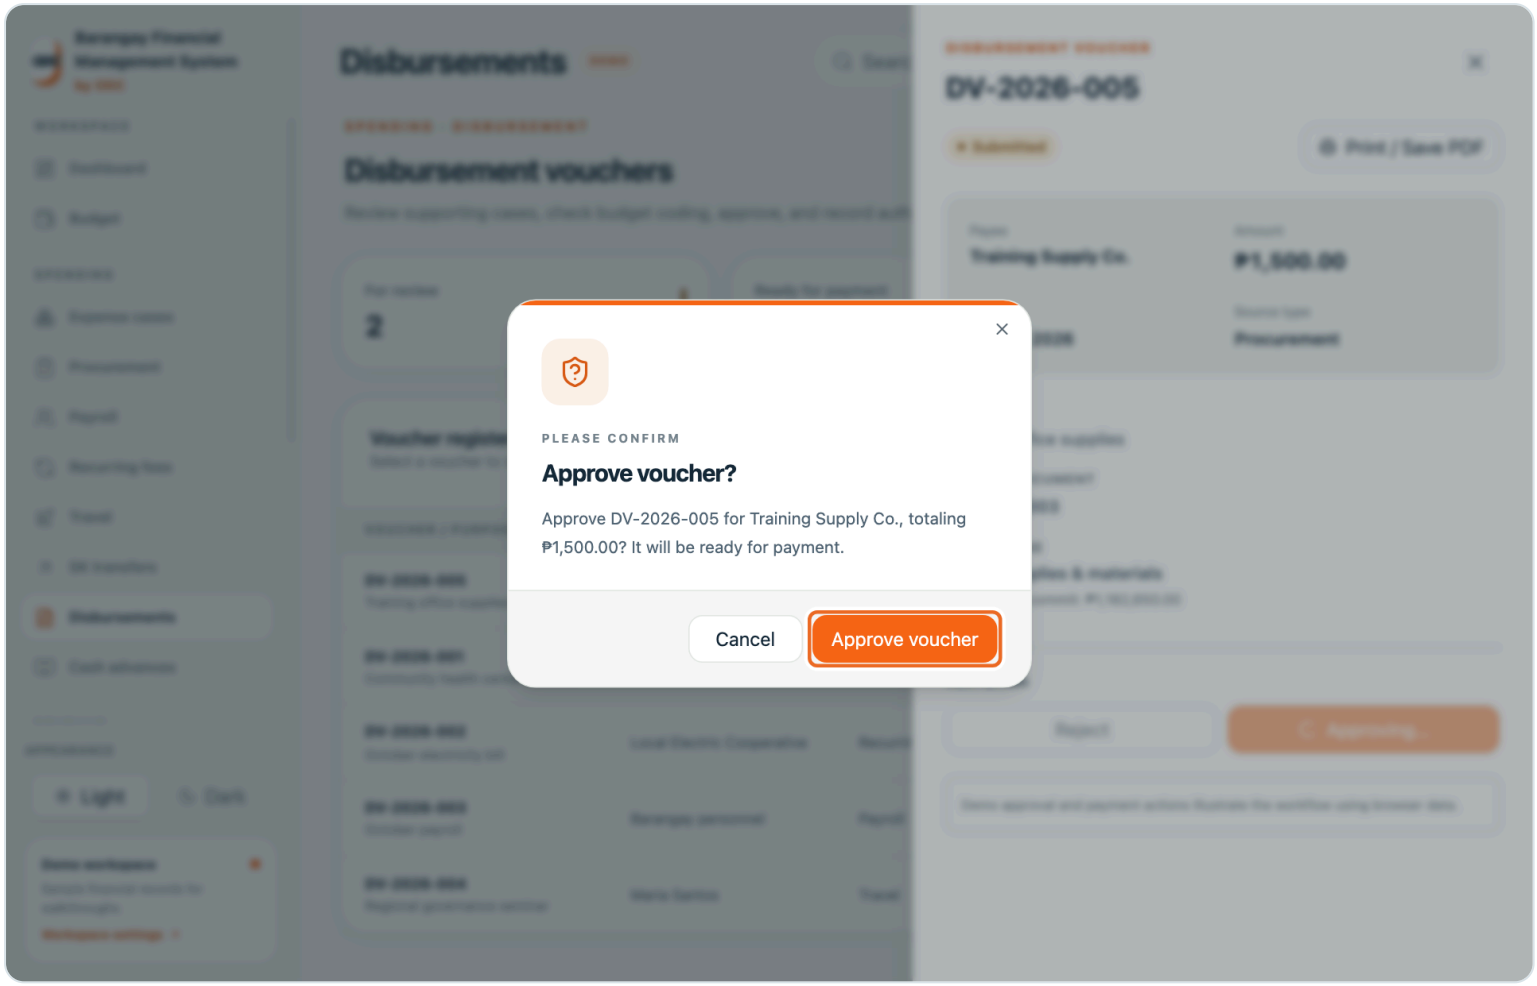

Approval records the obligation and makes the voucher ready for payment.

← Previous screen Next screen →

Workflow notes ↗

Approver: confirm the approval decision

Follow these steps in your workspace. Where shown, an orange outline marks the control to use.

1. Read the voucher number, payee and amount in the approval confirmation.
2. Choose Cancel to return to the submitted voucher if anything is wrong.
3. Choose Approve voucher to save the decision, then check the approved status.

What you should see

An assigned Approver can do this in their barangay; ordinary self-approval is blocked. The pictured account is a Super admin demo.

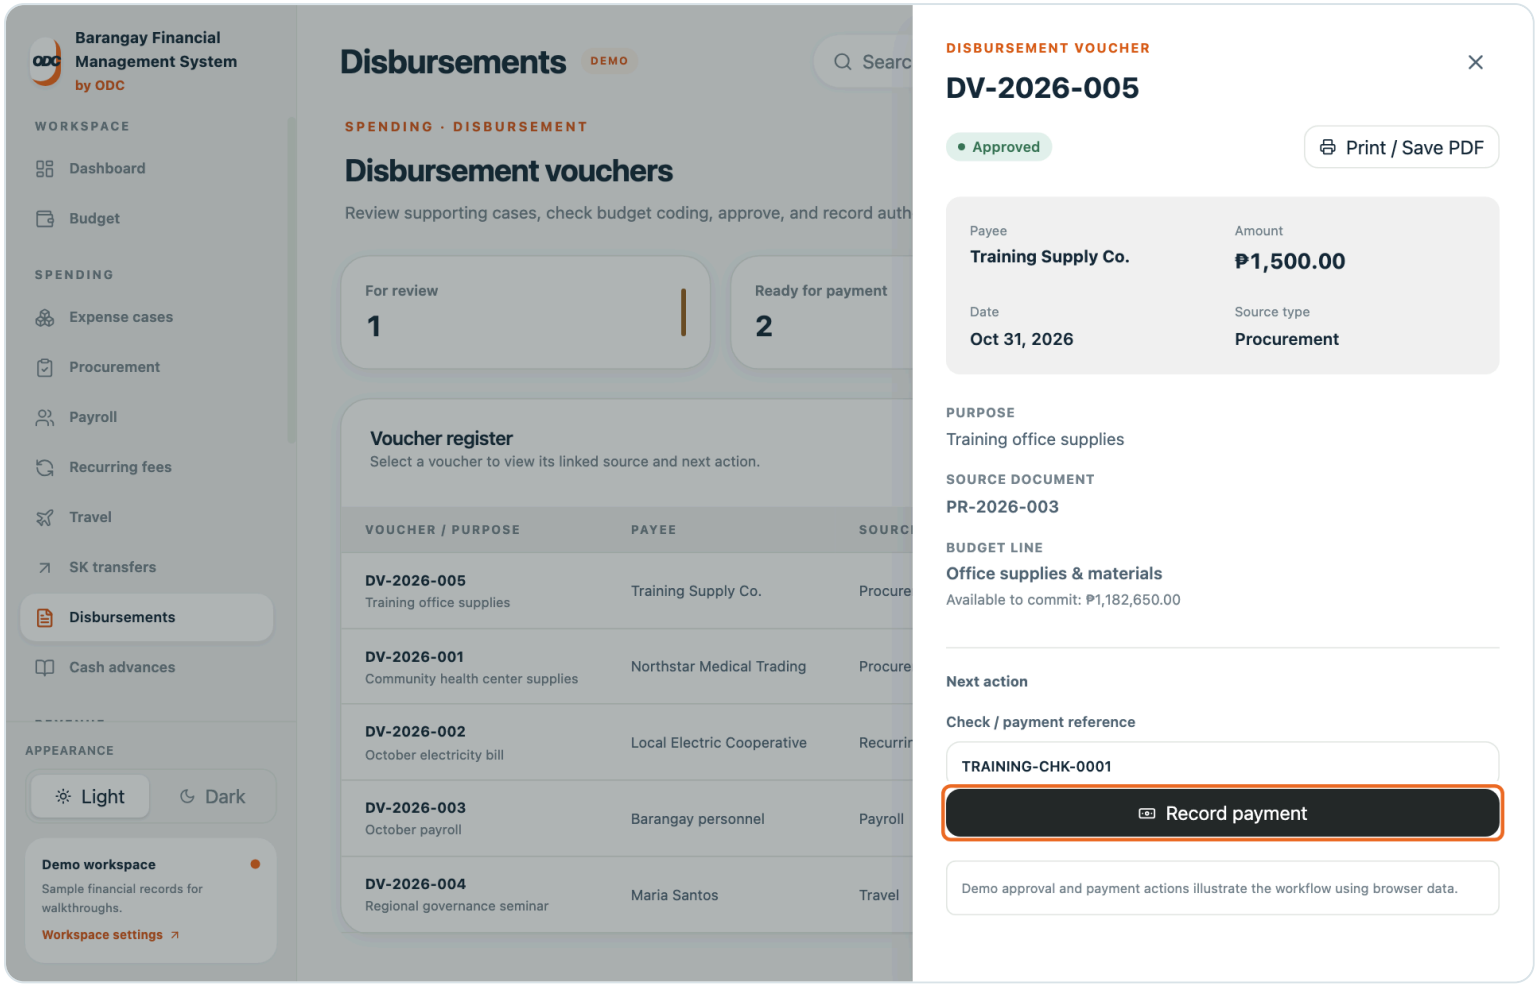

← Previous screen Next screen →

Workflow notes ↗

Actual application capture · Super admin demo · 31 October 2026. Names, references and amounts are training examples. Open the image to zoom.

Record the payment reference

Follow these steps in your workspace. Where shown, an orange outline marks the control to use.

1. After payment is issued, enter the actual check or transfer reference.
2. Check the voucher number and amount again.
3. As the assigned Treasurer or Super admin, choose Record payment and review its confirmation.

What you should see

This training example uses TRAINING-CHK-0001. Use the real payment reference in live work.

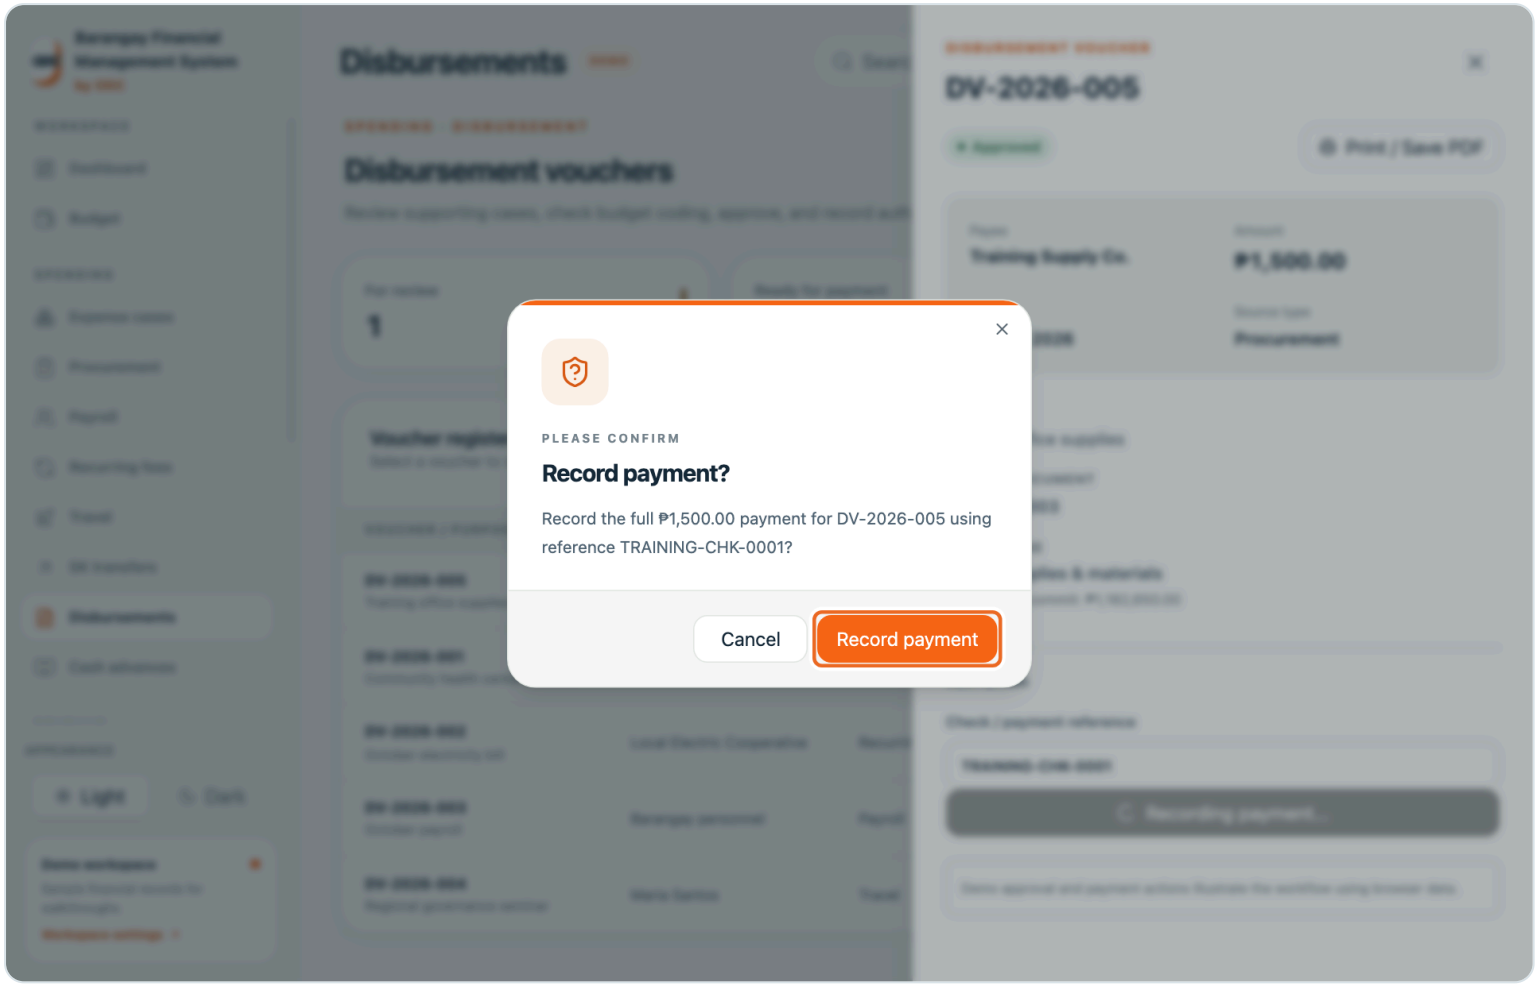

← Previous screen Next screen →

Workflow notes ↗

Actual application capture · Super admin demo · 31 October 2026. Names, references and amounts are training examples. Open the image to zoom.

Treasurer: confirm the recorded payment

Follow these steps in your workspace. Where shown, an orange outline marks the control to use.

Actual application capture · Super admin demo · 31 October 2026. Names, references and amounts are training examples. Open the image to zoom.

1. Read the voucher number, full payment amount and payment reference.
2. Choose Cancel if the payment or reference needs checking.
3. Choose Record payment to confirm, then check paid status and the saved reference.

What you should see

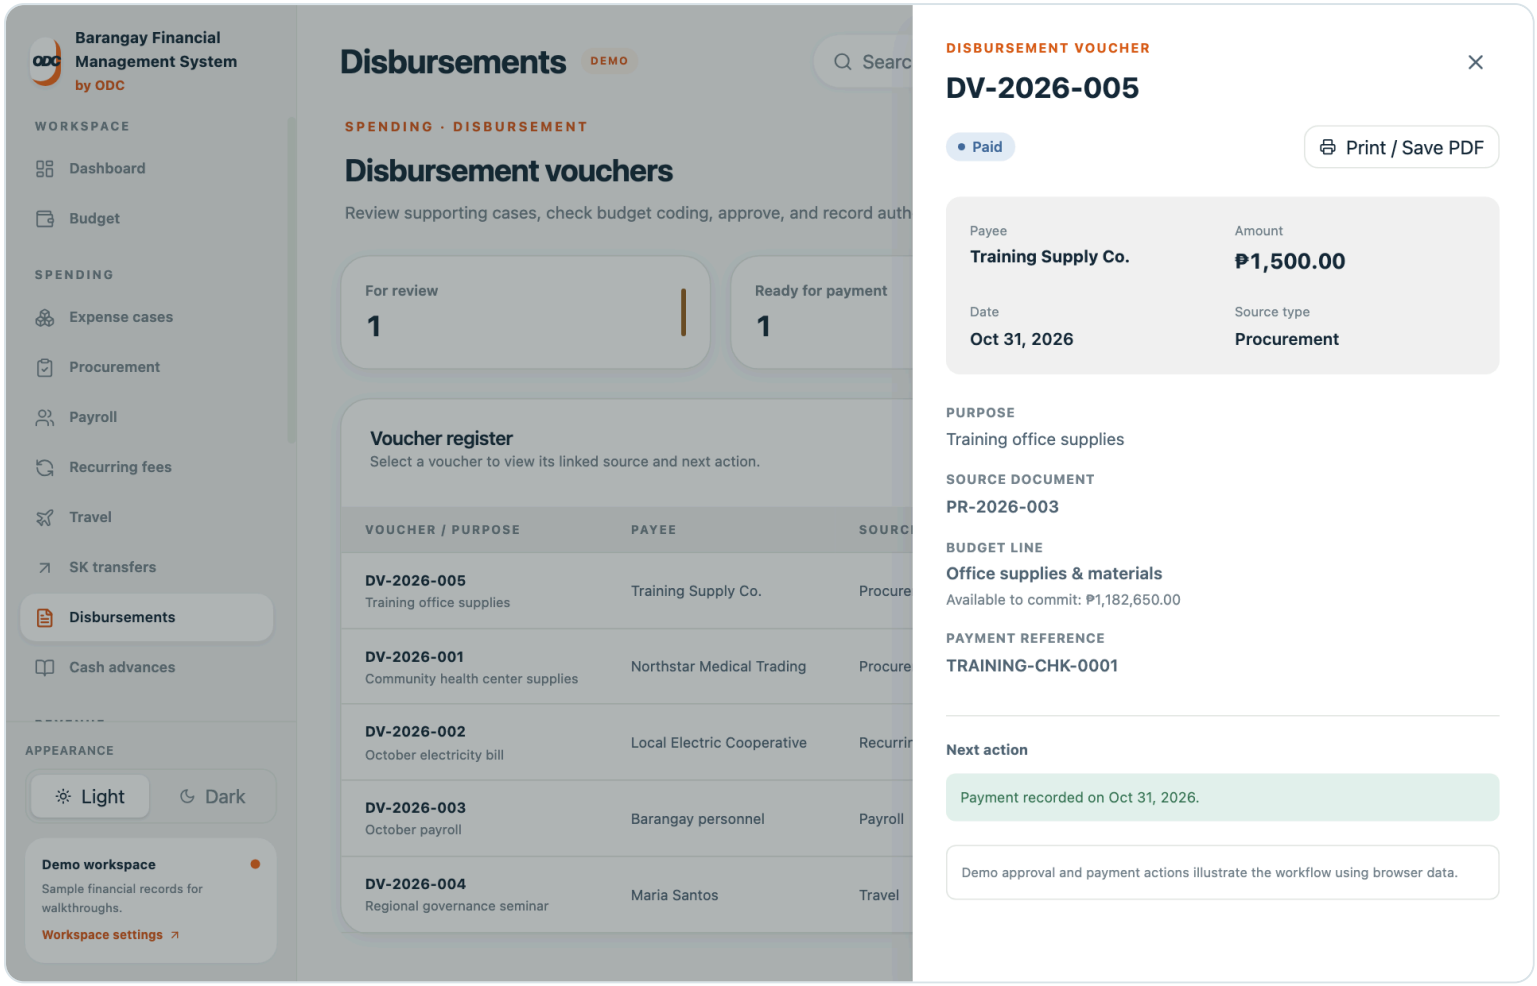

An assigned Treasurer can record the payment in their barangay. Recording this entry does not initiate a bank transfer or issue a check.

← Previous screen Next screen →

Workflow notes ↗

Confirm that the voucher is paid

Follow these steps in your workspace. Where shown, an orange outline marks the control to use.

Actual application capture · Super admin demo · 31 October 2026. Names, references and amounts are training examples. Open the image to zoom.

1. Check the paid status at the top of the voucher panel.
2. Verify the payment reference and recorded payment date.
3. Use Print / Save PDF if you need a system record copy.

What you should see

The paid voucher remains linked to its expense case and appears in reporting.

← Previous screen Workflow notes ↗

Settle a paid travel advance without paying twice.

Current live actor: Super admin · Intended staff owner: Treasurer · Screen: Cash advances

See the actual screens → 4 illustrated steps

BEFORE
Paid travel DV
Cash actually given to accountable person

→

OPEN
Open advance
One advance per voucher

→

SETTLE
Accepted expense + Cash refund
Each entry reduces the outstanding balance

→

FINISH
Outstanding = zero
Advance is fully settled

01 **Find an eligible travel voucher**
Open Cash advances. Under Paid travel vouchers eligible for an advance, confirm this is a genuine accountable cash advance.

02 **Choose Open advance**
The payee becomes the accountable person and the paid DV amount becomes the advance amount.

03 **Choose View in the register**
Review the Advance, Settled and Outstanding amounts.

04 **Record an accepted expense**
Choose Accepted expense, enter Description / evidence reference and Amount → Record demo entry. Use an amount no greater than the remaining balance.

05 **Record unused cash returned**
Choose Cash refund and enter its evidence reference and amount. Confirm Outstanding reaches zero when all funds are accounted for.

Worked example

Advance **₱10,000**
Accepted expenses **₱8,500**
Cash refund **₱1,500**

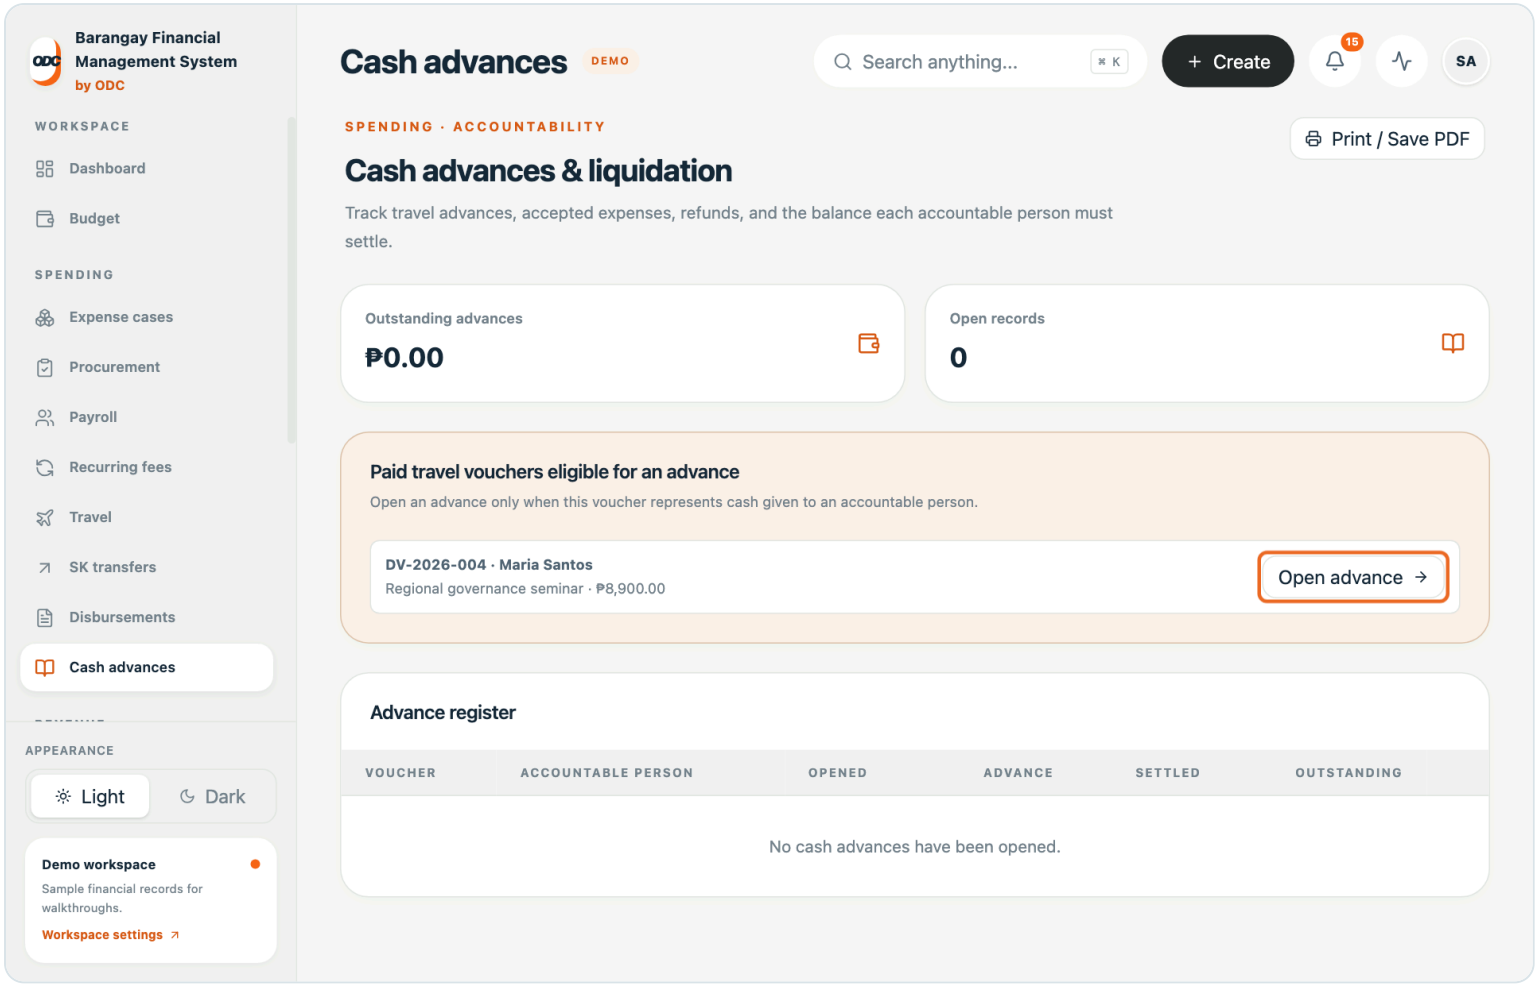

Outstanding **₱0**

Current settlement behavior

An expense entry reduces the advance balance; a refund also returns cash. These entries do not create another voucher payment. Separate liquidation submission/approval, file attachments, due dates and excess reimbursement are not available in this screen.

Open an advance from a paid travel voucher

Follow these steps in your workspace. Where shown, an orange outline marks the control to use.

Actual application capture · Super admin demo · 31 October 2026. Names, references and amounts are training examples. Open the image to zoom.

1. Open Cash advances after the travel voucher is paid.
2. Find the eligible voucher and accountable person.
3. Choose Open advance only if this payment was cash given to that person.

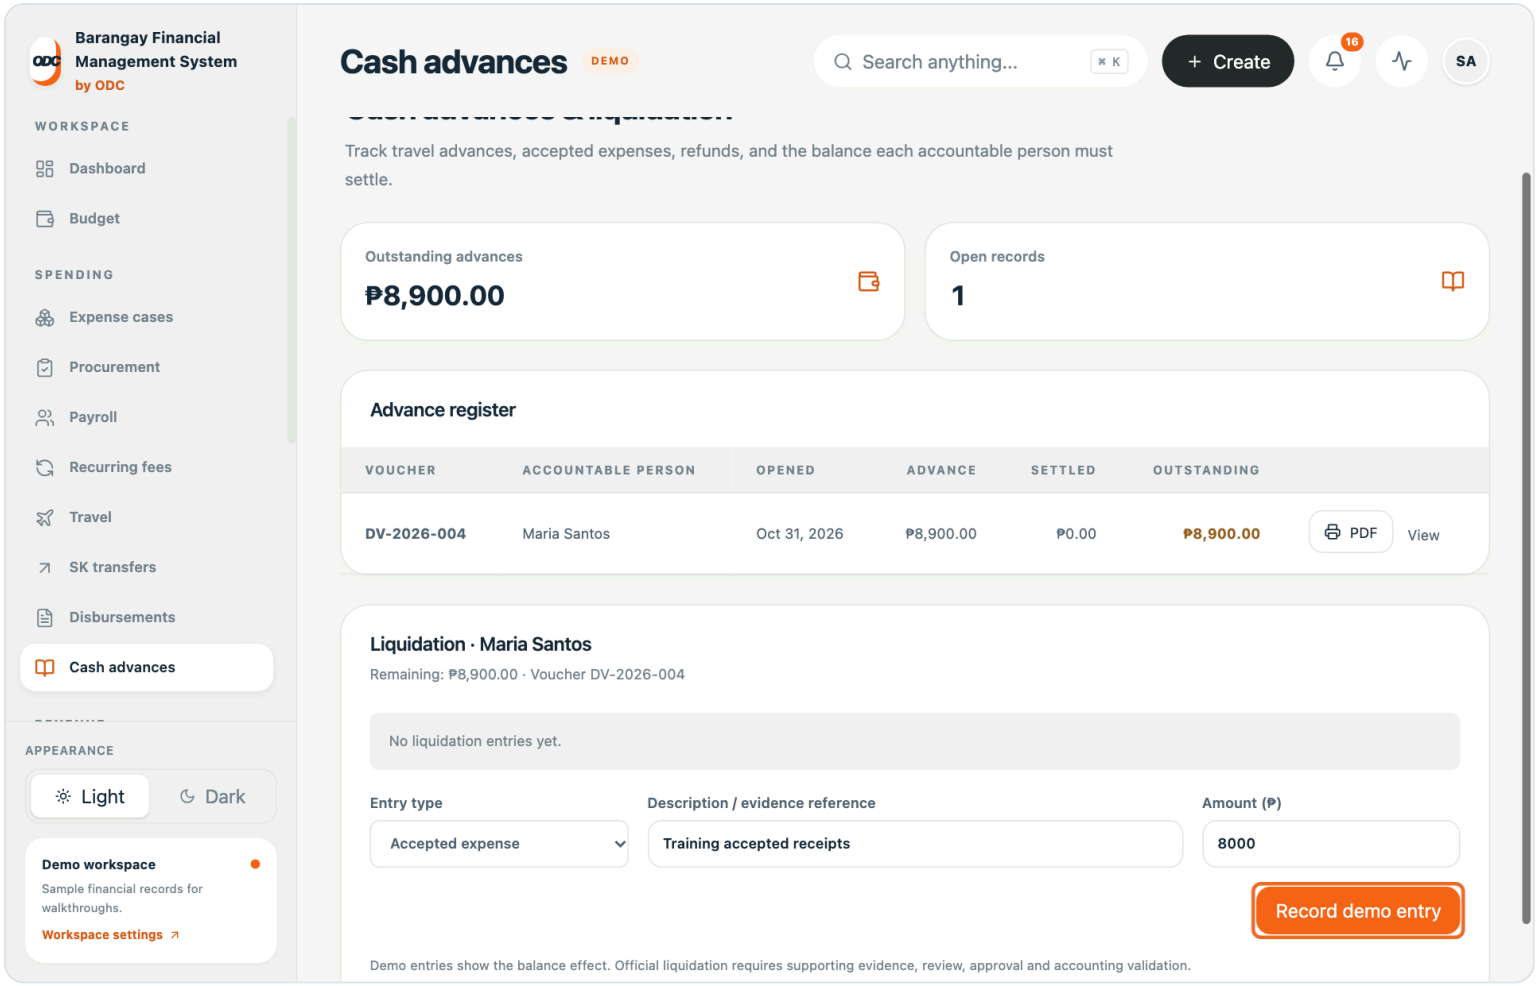

What you should see

Opening tracking does not create a second payment. The example advance is ₱8,900.00.

Next screen → **Workflow notes ↗**

Record an accepted liquidation expense

Follow these steps in your workspace. Where shown, an orange outline marks the control to use.

Actual application capture · Super admin demo · 31 October 2026. Names, references and amounts are training examples. Open the image to zoom.

1. Choose View on the advance to open Liquidation.
2. Keep Entry type as Accepted expense; enter the evidence reference and amount.
3. Choose Record demo entry. This example accepts ₱8,000.00 against ₱8,900.00.

What you should see

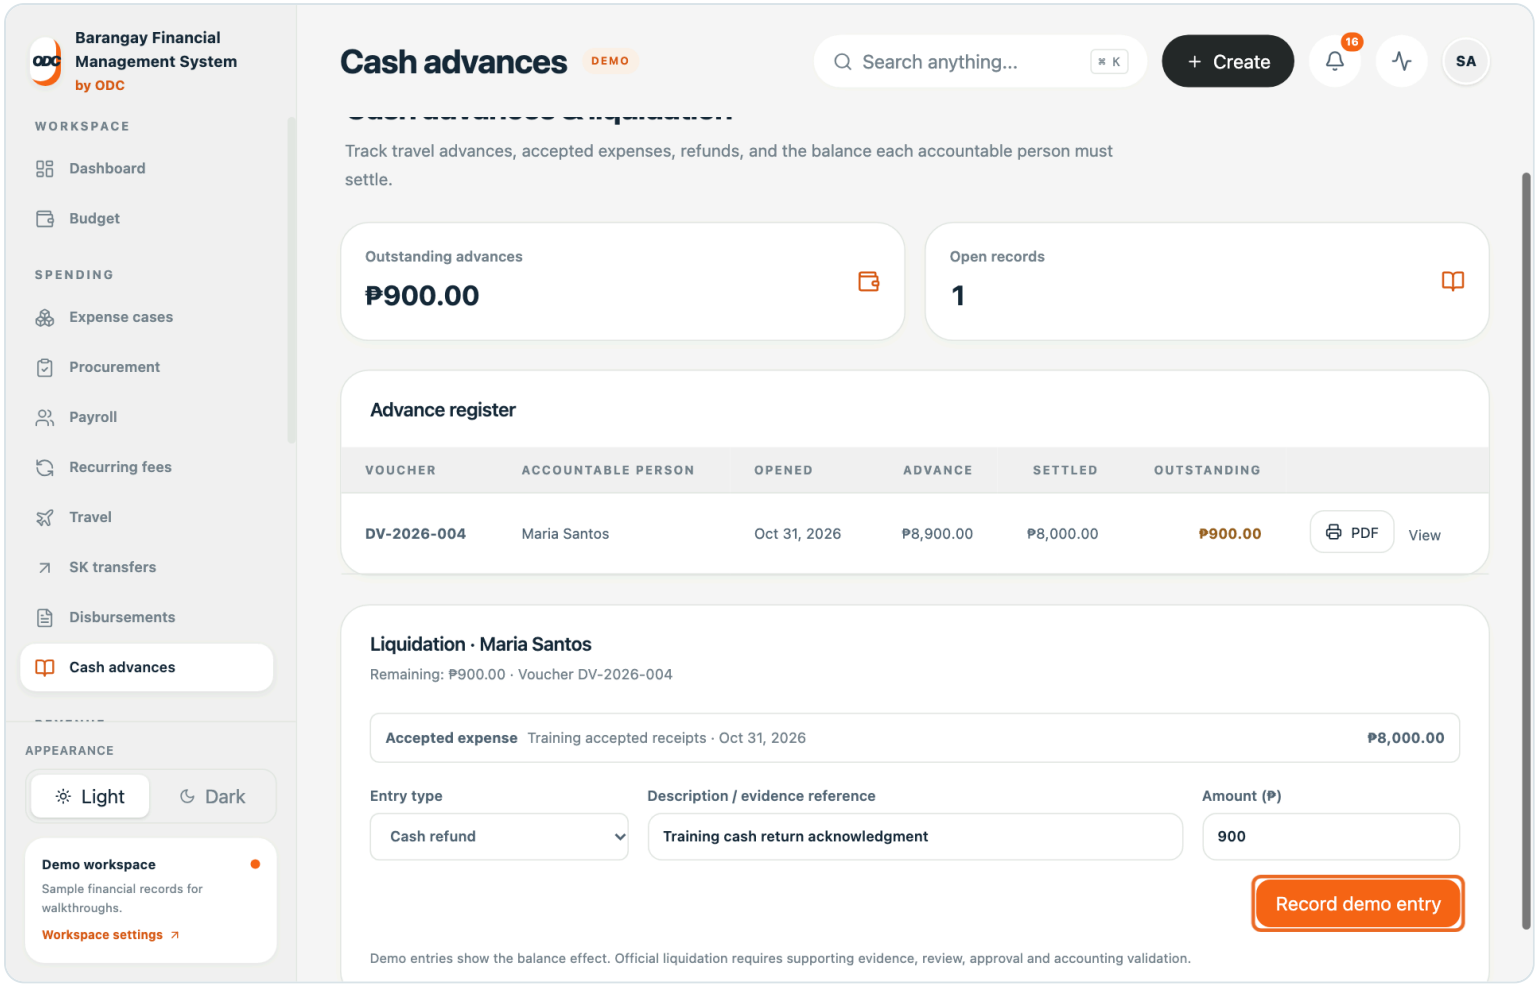

The remaining outstanding amount will be ₱900.00. Record accepted amounts only.

← Previous screen Next screen →

Workflow notes ↗

Return the unused balance

Follow these steps in your workspace. Where shown, an orange outline marks the control to use.

Actual application capture · Super admin demo · 31 October 2026. Names, references and amounts are training examples. Open the image to zoom.

1. Choose Cash refund as Entry type.
2. Enter the return acknowledgment and the unused amount, here ₱900.00.
3. Choose Record demo entry and confirm the advance becomes fully settled.

What you should see

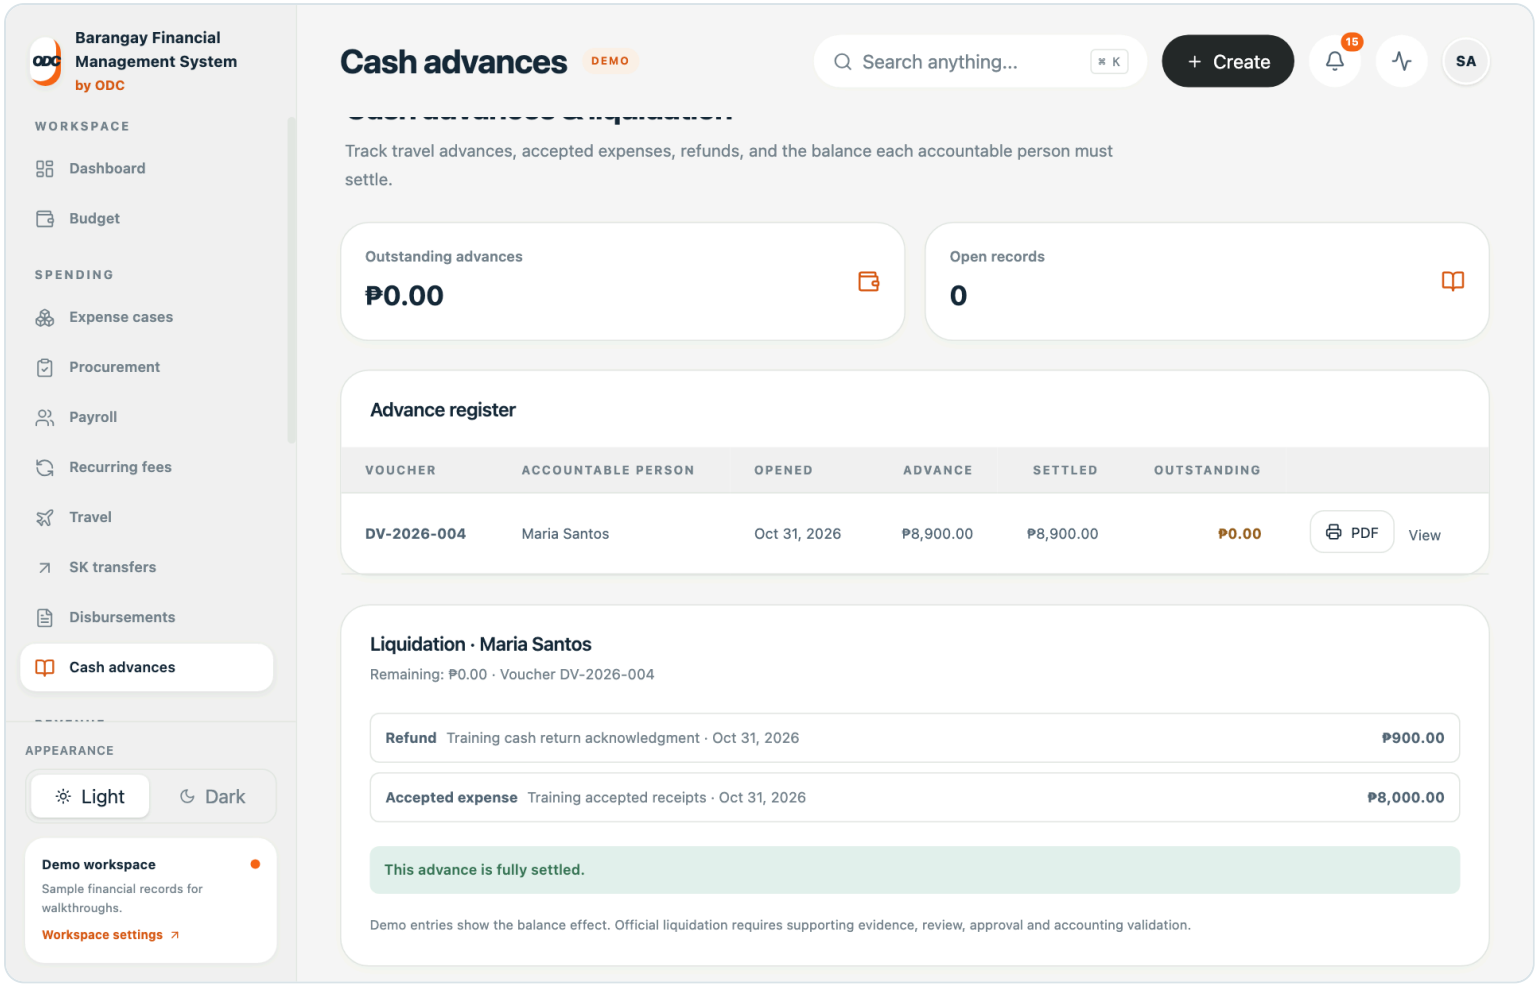

Accepted expenses plus refunds must equal the advance before its balance reaches zero.

← Previous screen Next screen →

Workflow notes ↗

Verify the settled advance

Follow these steps in your workspace. Where shown, an orange outline marks the control to use.

Actual application capture · Super admin demo · 31 October 2026. Names, references and amounts are training examples. Open the image to zoom.

1. Check the accepted expense and refund entries in Liquidation.
2. Confirm the fully settled message.
3. Keep the evidence references with the case; use PDF for a system record copy.

What you should see

₱8,000.00 accepted + ₱900.00 refunded = ₱8,900.00 settled.

← Previous screen Workflow notes ↗

Record a receipt and keep its unmatched balance visible.

Current live actor: Super admin · Intended staff owner: Collector · Screen: Collections

See the actual screens → 3 illustrated steps

01 **Choose Record collection**

Enter Payer, Revenue category, Amount and Purpose / particulars.

02 **Review the collection details**

Confirm the payer, purpose and peso amount before saving. The current form does not offer a payment-method selector.

03 **Choose Issue demo receipt**

In a live workspace this records a live collection. Confirm its receipt number and Issued status in the register.

04 **Check Unmatched**

A newly issued receipt starts with its full amount awaiting matching. It is ready to allocate to a deposit or remittance.

05 **Continue to Deposits & remittances**

Prepare a matching batch after the actual bank deposit or treasury remittance is supported by its reference.

Categories in the current form

Clearance fees · Certification fees · Other income · Barangay aid · Permit fees

Worked example

Record a **₱500** clearance collection. The receipt is Issued; its Unmatched amount is **₱500**. The receipt number is generated automatically.

If a receipt needs to be voided

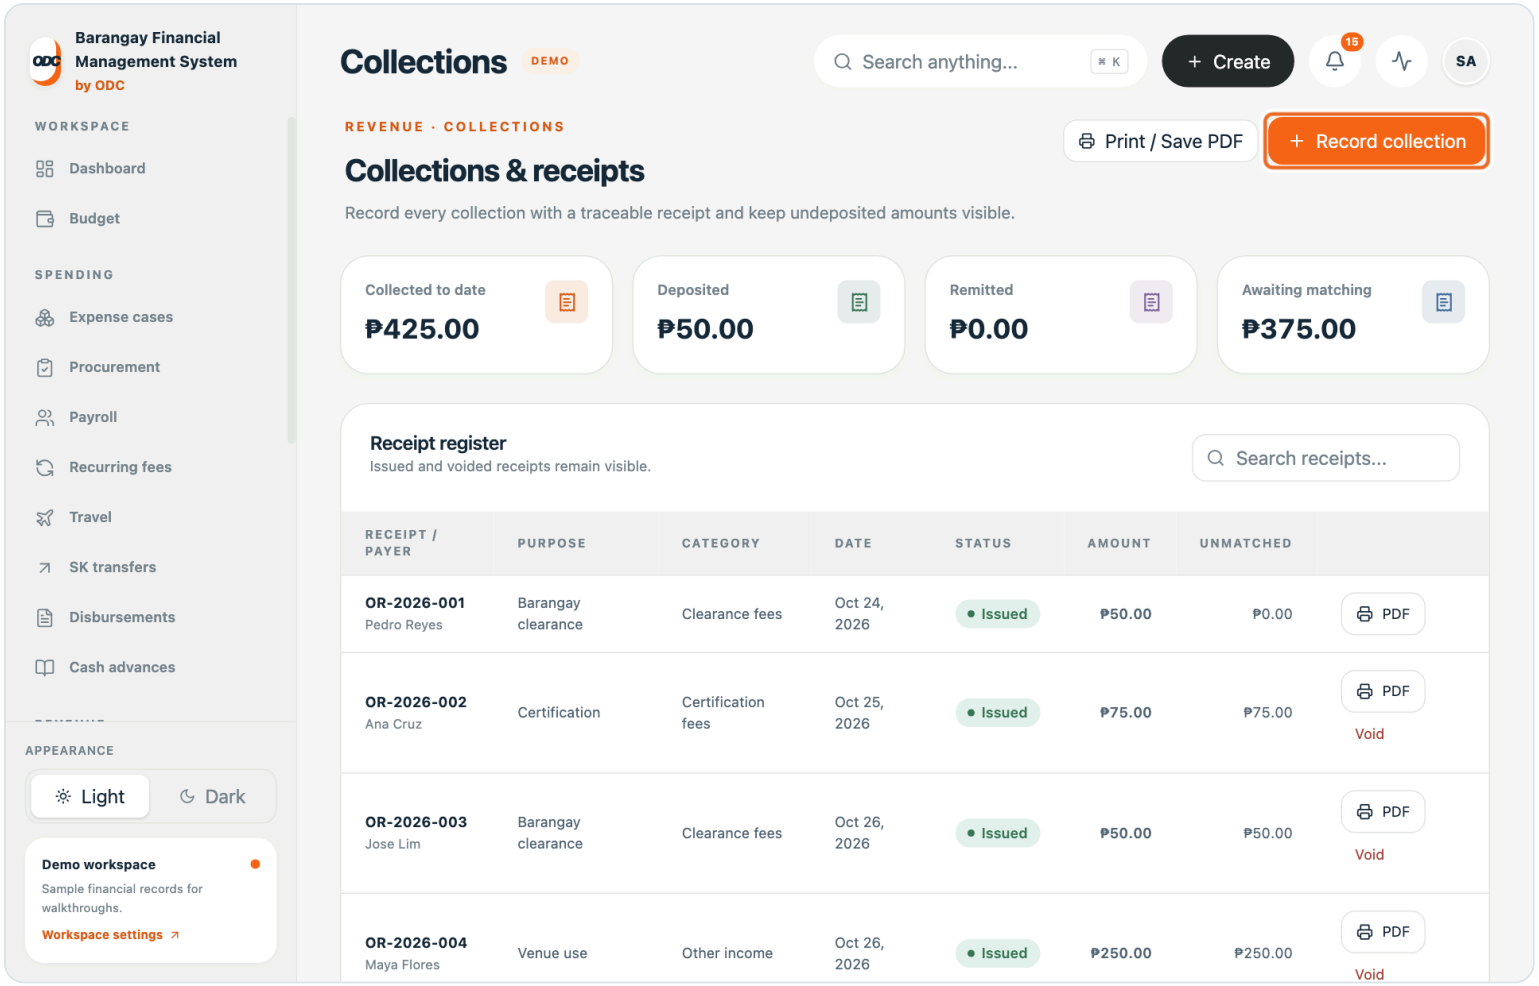

An issued receipt with no deposit allocation offers Void → confirmation. It remains in history as Voided. Any receipt already linked to a deposit/remittance cannot be voided through this action.

Receipt scope

This screen stores a receipt record. Official accountable-form stock, authorized serial allocation and an individual receipt-printing workflow are not implemented here.

Start a collection receipt

Follow these steps in your workspace. Where shown, an orange outline marks the control to use.

Actual application capture · Super admin demo · 31 October 2026. Names, references and amounts are training examples. Open the image to zoom.

1. Open Collections and review the summary amounts.
2. Check the receipt register for an existing entry.
3. Choose Record collection to record a new receipt.

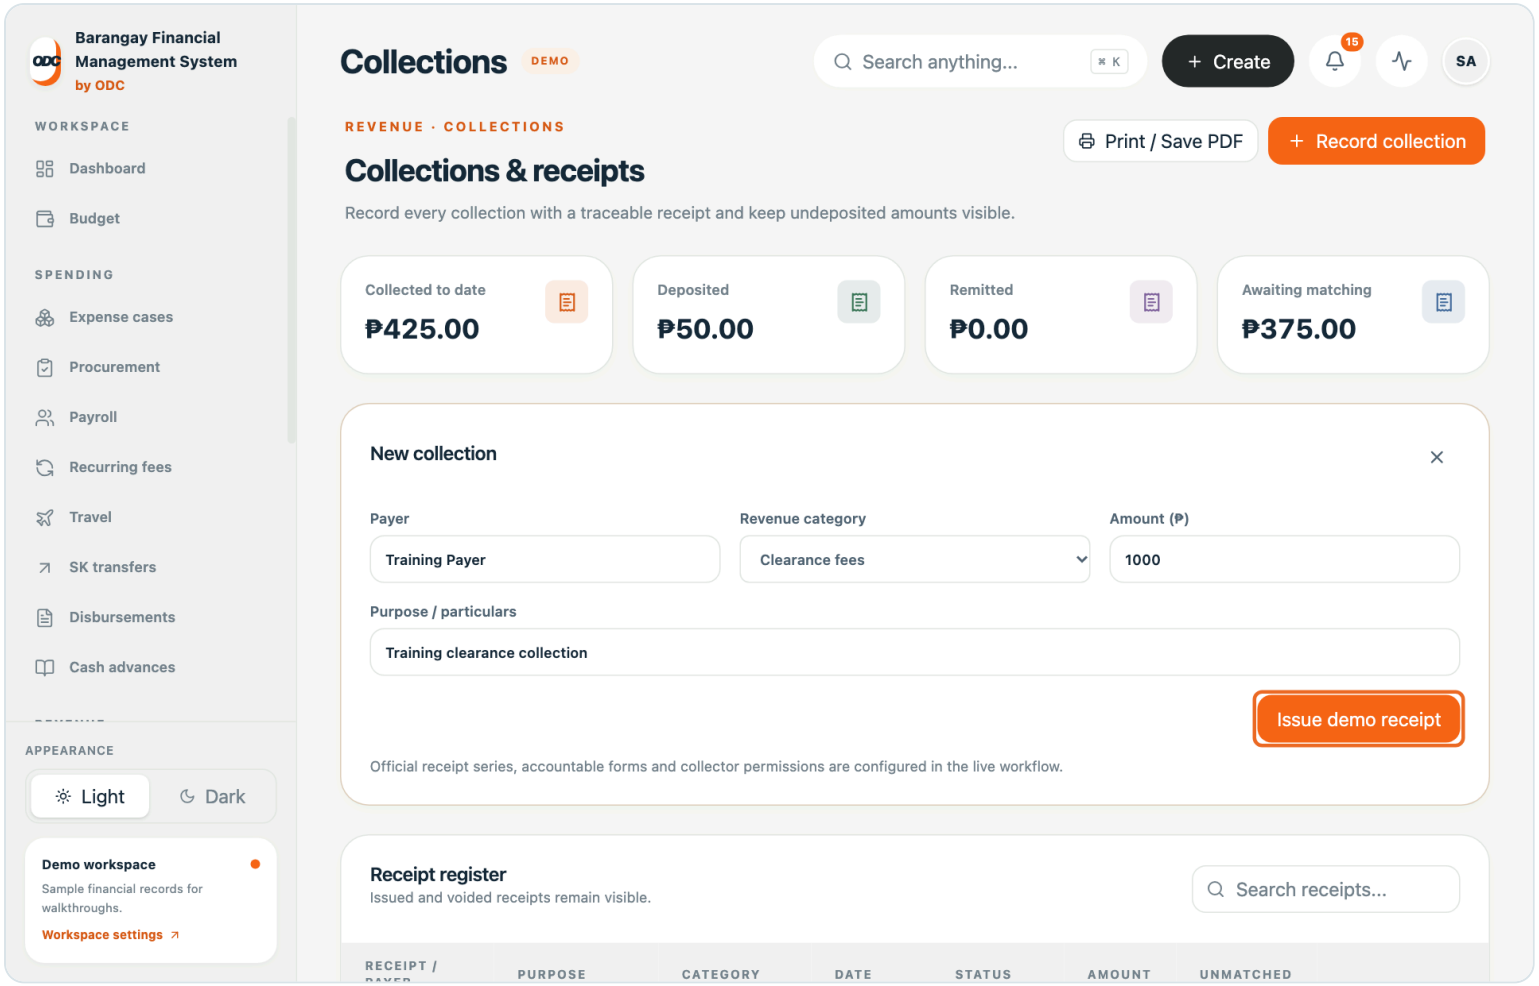

What you should see

Awaiting matching is the collection balance still to allocate to a deposit or remittance.

Next screen → **Workflow notes ↗**

Enter and save the receipt

Follow these steps in your workspace. Where shown, an orange outline marks the control to use.

Actual application capture · Super admin demo · 31 October 2026. Names, references and amounts are training examples. Open the image to zoom.

1. Enter the payer and choose the collection category.
2. Enter the amount in pesos and describe the particulars.
3. Choose Issue demo receipt. The example records ₱1,000.00 for Training Payer.

What you should see

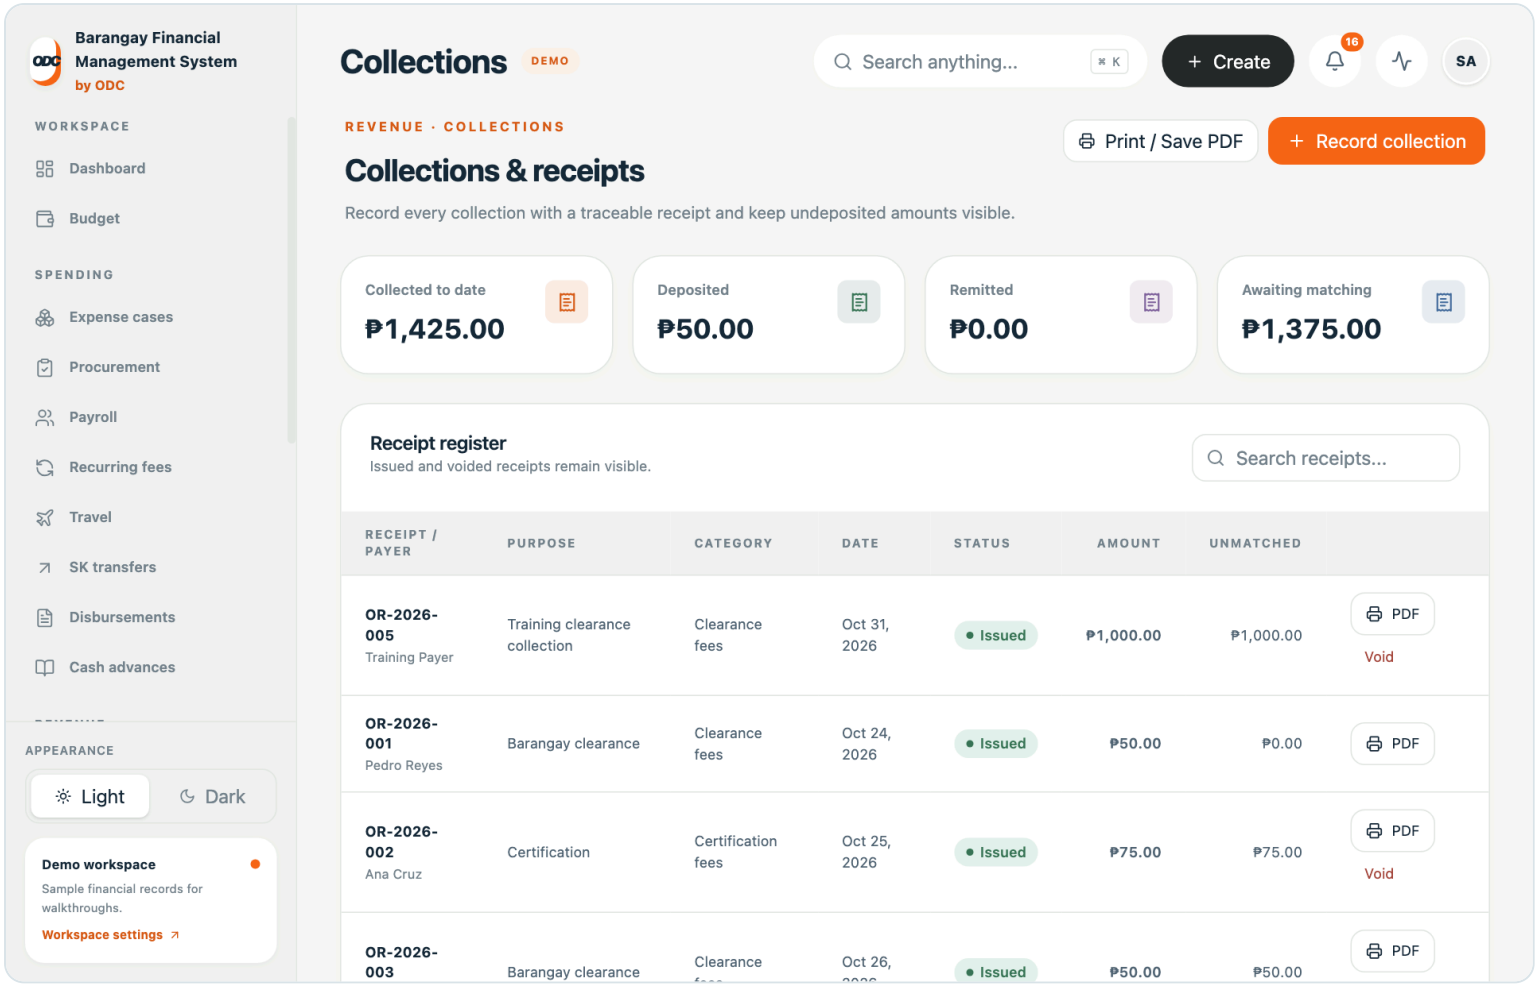

The application assigns the receipt number; the new receipt starts with an unmatched balance.

← Previous screen Next screen →

Workflow notes ↗

Check the new receipt

Follow these steps in your workspace. Where shown, an orange outline marks the control to use.

Actual application capture · Super admin demo · 31 October 2026. Names, references and amounts are training examples. Open the image to zoom.

1. Find Training Payer in the receipt register.
2. Verify the receipt number, amount, category and particulars.
3. Continue to Deposits & remittances when the real treasury movement is ready.

What you should see

Saving a receipt does not automatically match it to a bank deposit.

← Previous screen Workflow notes ↗

Match actual treasury movements to receipts.

Current live actor: Super admin · Intended staff owner: Treasurer · Screen: Deposits & remittances

See the actual screens → 3 illustrated steps

01 **Choose New matching batch**

Select Bank deposit or Treasury remittance.

02 **Enter the destination and proof reference**

Fill Depository bank or Remittance recipient, then Reference / acknowledgement.

03 **Select the receipts**

Choose one or more Unmatched receipts. The form starts with each selected receipt's remaining amount.

04 **Adjust partial allocations if needed**

Enter the amount covered for each selected receipt. Never allocate more than its unmatched balance.

05 **Check the Batch total**

Compare the total with the bank validation or recipient acknowledgement.

06 **Choose Confirm demo batch**

Confirm the batch in the Matching register. Review the remaining receipt balance and the Matching report.

Partial-match example

Receipt: **₱1,000**
First batch: **₱600**
Remaining unmatched: **₱400**

Allocate the remaining ₱400 in a later batch.

What each type does

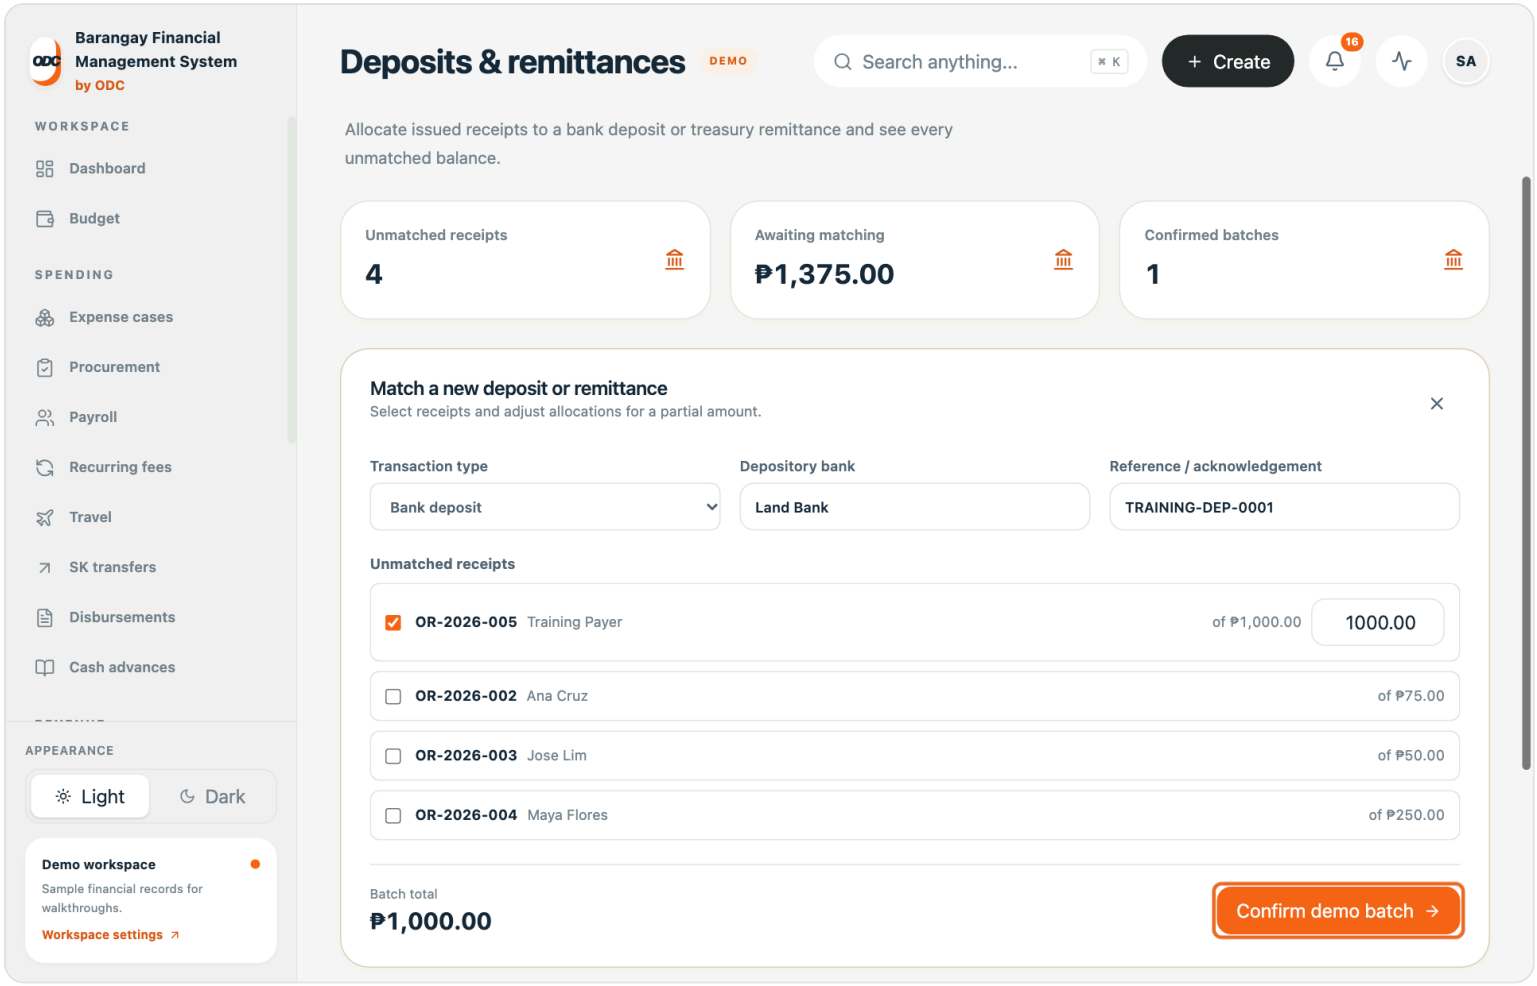

Bank deposit: reduces collected cash on hand and increases bank.
Treasury remittance: reduces cash on hand; does not increase this workspace's bank balance.

Do not count the money twice

A deposit allocates an existing collection; it is not another income entry. The current screen confirms directly and stores a reference. Separate draft/review/approval and document upload are planned.

Allocate receipts to a bank deposit

Follow these steps in your workspace. Where shown, an orange outline marks the control to use.

1. Choose New matching batch and keep Bank deposit selected.
2. Enter the bank and the real reference or acknowledgment.
3. Select the receipt checkbox; adjust the allocation in pesos for a partial match.

What you should see

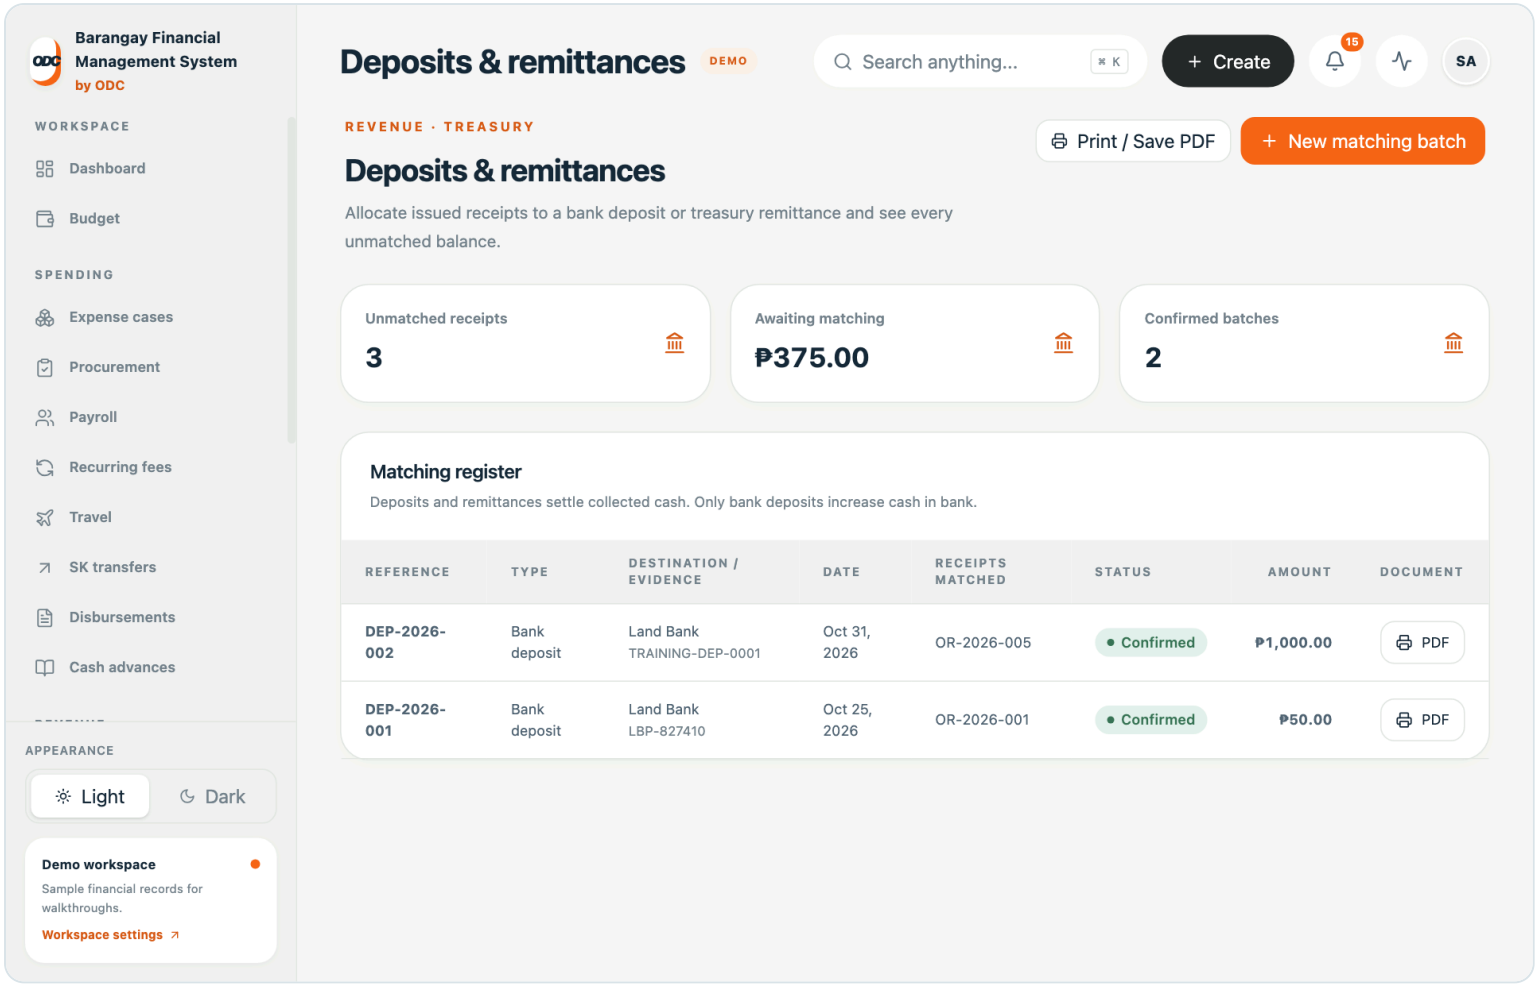

This image allocates the complete ₱1,000.00 training receipt. Batch total equals the selected allocations.

Next screen → **Workflow notes ↗**

Actual application capture · Super admin demo · 31 October 2026. Names, references and amounts are training examples. Open the image to zoom.

Check the confirmed matching batch

Follow these steps in your workspace. Where shown, an orange outline marks the control to use.

Actual application capture · Super admin demo · 31 October 2026. Names, references and amounts are training examples. Open the image to zoom.

1. Find TRAINING-DEP-0001 in the matching register.
2. Verify its type, bank, total and allocated receipt.
3. Check that the receipt's unmatched balance has decreased by the allocation.

What you should see

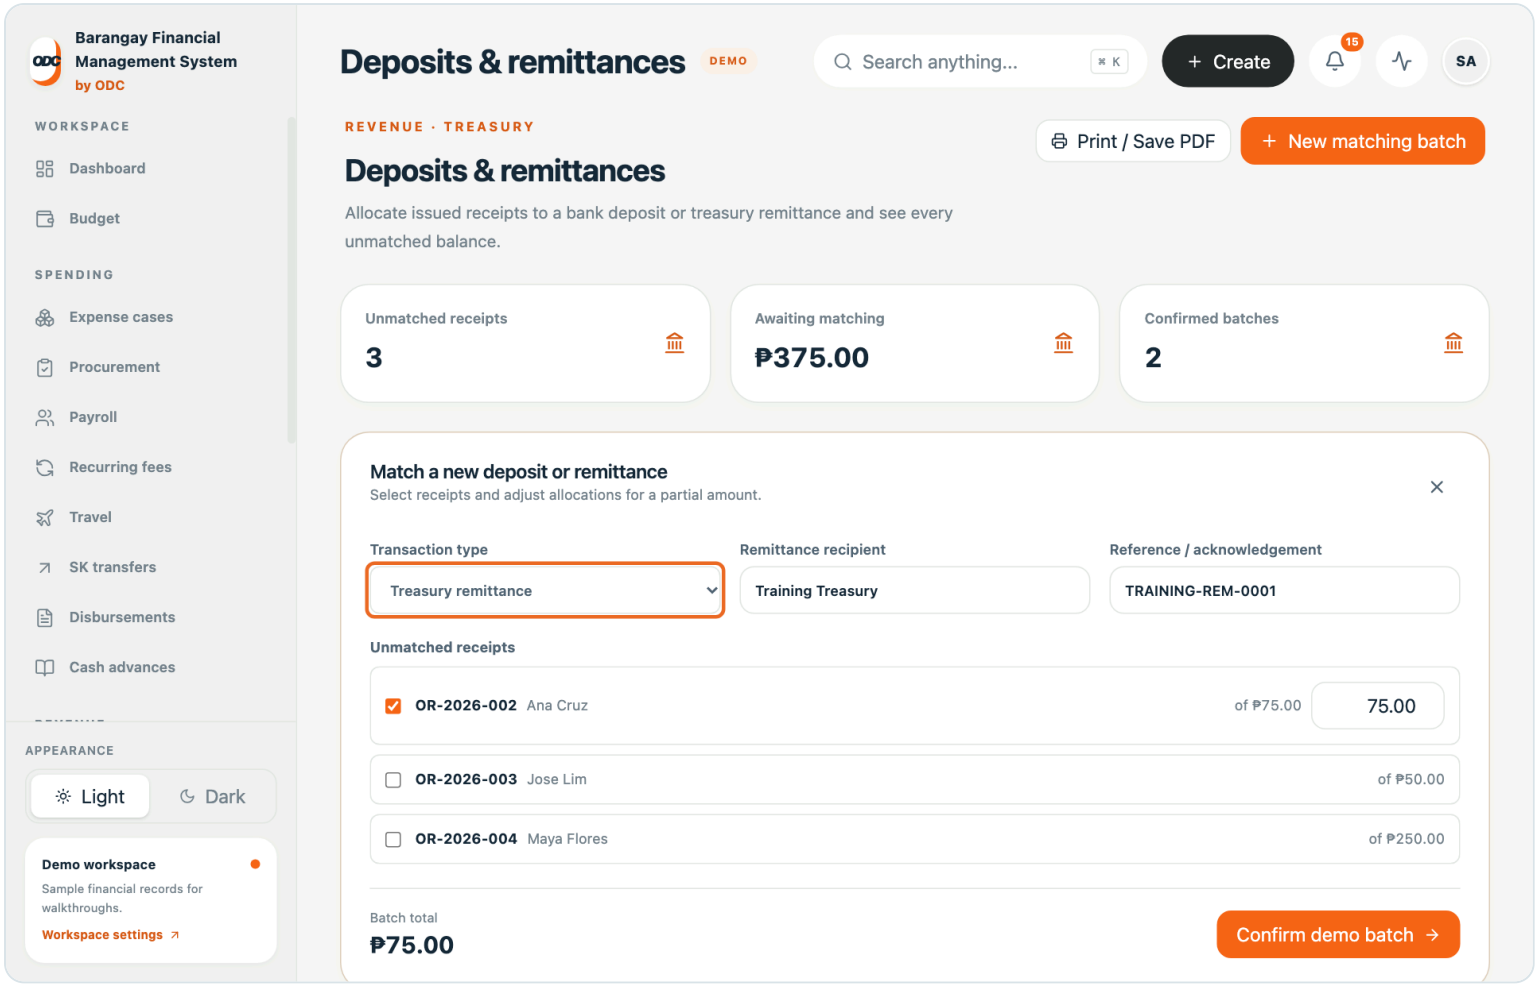

A confirmed bank deposit moves the selected amount from cash to bank.

← Previous screen Next screen →

Workflow notes ↗

Record a treasury remittance

Follow these steps in your workspace. Where shown, an orange outline marks the control to use.

Actual application capture · Super admin demo · 31 October 2026. Names, references and amounts are training examples. Open the image to zoom.

1. Choose Treasury remittance under Transaction type.
2. Enter the receiving treasury and acknowledgment reference.
3. Select the receipts and allocations, review Batch total, then confirm when correct.

What you should see

A remittance reduces cash and increases remitted collections. Use a bank deposit for movements into the bank.

← Previous screen Workflow notes ↗

Check the record trail and share a preview.

Reports and Audit trail require their page permission. Figures follow the selected financial pages and barangay.

See the actual screens → 3 illustrated steps

01 **Confirm the workspace scope**

Check the barangay and displayed year. The current report screen has no independent date/fund filter or finalized snapshot selector.

02 **Open Reports and choose a report**

Select the report name on the left. Check whether its badge says preview or template pending.

03 **Compare against the source register**

Reconcile voucher, receipt, allocation or advance details before sharing. Limited roles may see only part of the underlying dataset.

04 **Choose CSV or Print**

CSV downloads the current table. Print opens browser printing; choose Save as PDF if available. Pending templates have these actions disabled.

05 **Inspect Audit trail where authorized**

Search by action, subject or details and review actor/time information. The live loader currently retrieves up to the latest 200 events.

Working previews / 9

RAO · SAOB · Summary of checks issued · Cashbook · REAI · Matching of collection and deposit · RCD · RCR · Liquidation report

Template pending / 3

PBC · RAAF · Transmittal

Approved income estimates are also missing from the complete REAI. Official layouts and signatories require completion.

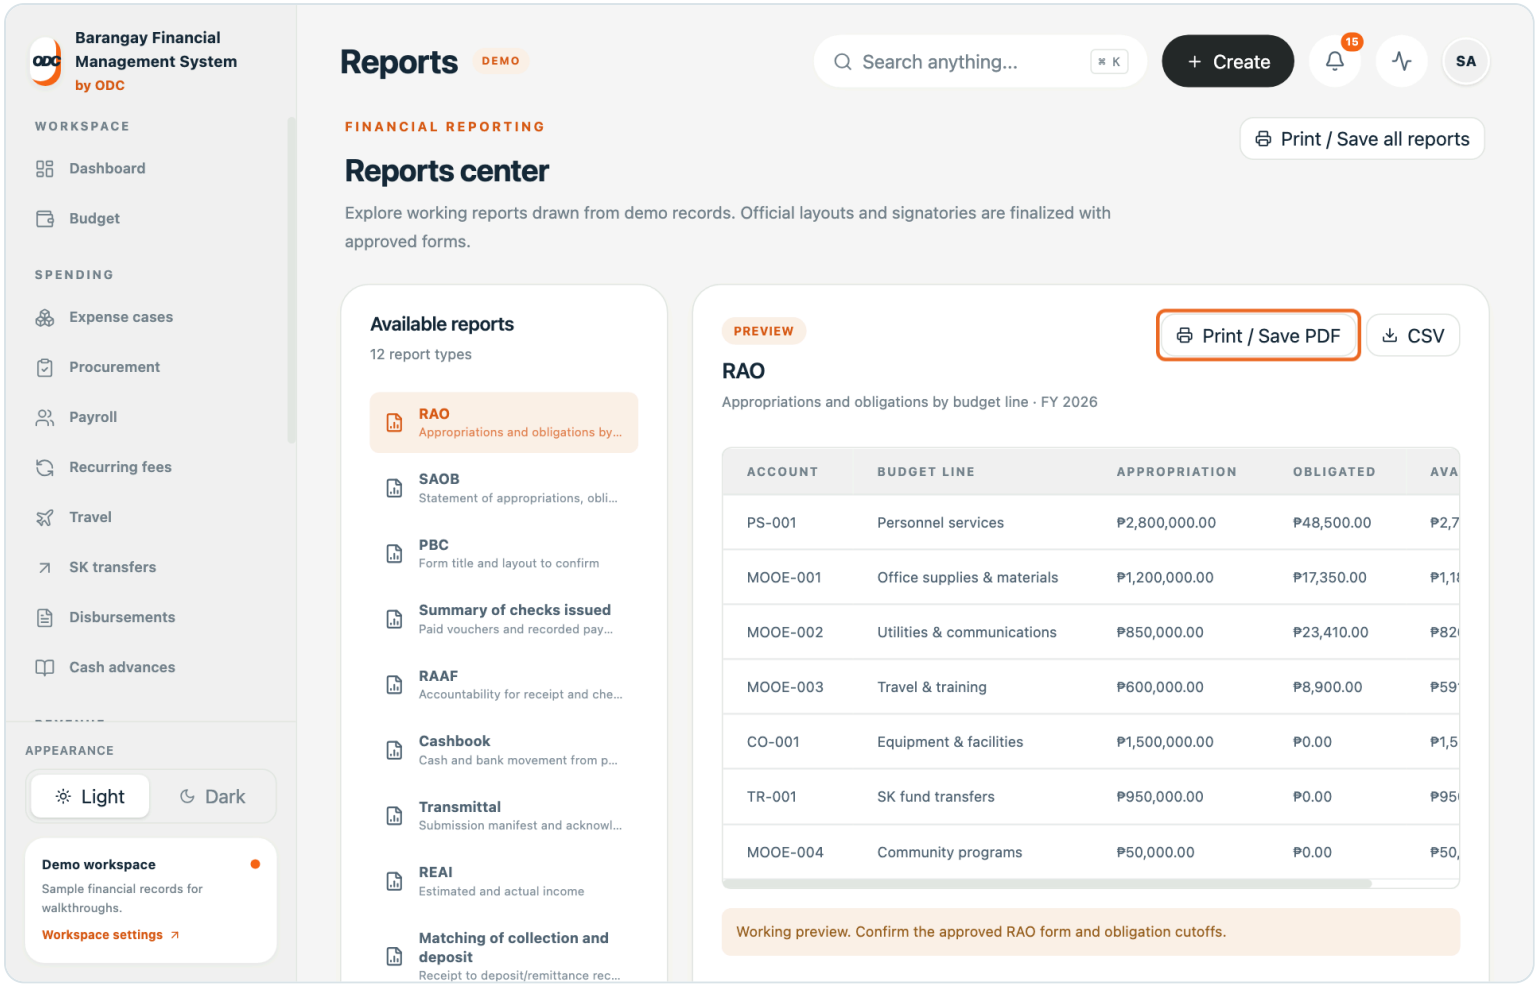

Read previews in context

Live opening balances currently start at zero. The Cashbook preview is reconstructed from visible records rather than read directly from the stored cashbook ledger. Use a broad-access account for reconciliation; the preview is not a finalized official statement.

Basis: reports-view.tsx · report-data.ts · audit-view.tsx · workspace-data.ts

Choose and check a report

Follow these steps in your workspace. Where shown, an orange outline marks the control to use.

Actual application capture · Super admin demo · 31 October 2026. Names, references and amounts are training examples. Open the image to zoom.

1. Open Reports and choose a report from Available reports.
2. Check the fiscal year, displayed columns and totals against the underlying registers.
3. Choose CSV for data or Print / Save PDF for the selected report. Print / Save all reports combines the available previews.

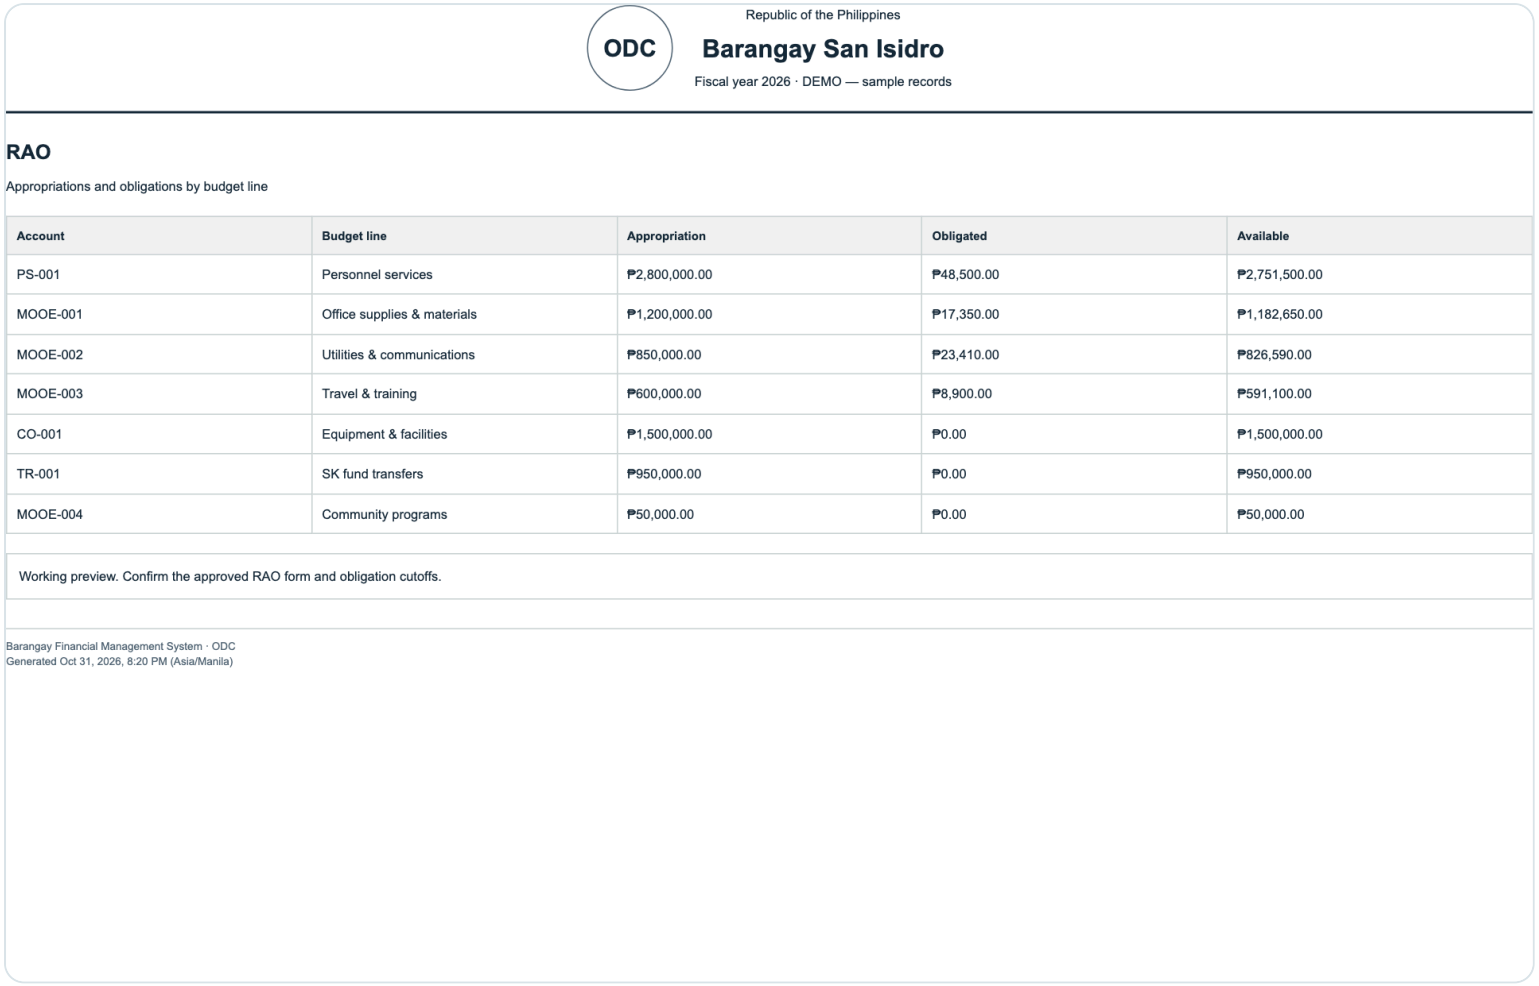

What you should see

The report shown is a working preview drawn from the demo records.

Next screen → **Workflow notes ↗**

Save a report as PDF

Follow these steps in your workspace. Where shown, an orange outline marks the control to use.

Republic of the Philippines

Workflow notes ↗

Trace the actions in the audit trail

Follow these steps in your workspace. Where shown, an orange outline marks the control to use.

Actual application capture · Super admin demo · 31 October 2026. Names, references and amounts are training examples. Open the image to zoom.

1. Open Audit trail.
2. Find the record reference or action you need to review.
3. Compare its time, actor and details with the expense, receipt or treasury register.

What you should see

Use the audit trail with the linked financial records when reconciling or following up a discrepancy.

← Previous screen Workflow notes ↗

Encoder and Procurement officer: prepare the handoff.

Start with your role below. Each dedicated page gives six numbered steps, an actual screen, live permissions and the next owner.

Encoder Procurement officer (PO) Budget officer Approver Treasurer Collector Auditor Administrator Super admin

Open Encoder walkthrough →

Encoder

1. Receive and identify the request
2. Check the budget line
3. Check the source expense case
4. Prepare the linked draft DV
5. Verify and arrange submission
6. Hand the reference to the Approver

Current live access: view permitted budget, expense, voucher, advance and report pages. Creating cases, creating DVs and submitting vouchers still require a Super admin. The preparation and submission buttons pictured belong to the demo account.

Open Procurement officer (PO) walkthrough →

Procurement officer (PO)

1. Find the purchase request
2. Check the budget and PR
3. Coordinate RFQ work
4. Coordinate the Purchase Order
5. Check delivery and AIR
6. Hand off the ready case

Current live access: view Procurement, Budget, Dashboard and Reports by default. Advancing stages and creating a DV still require a Super admin. PO in the role name means Procurement officer; PO in the document path means Purchase Order.

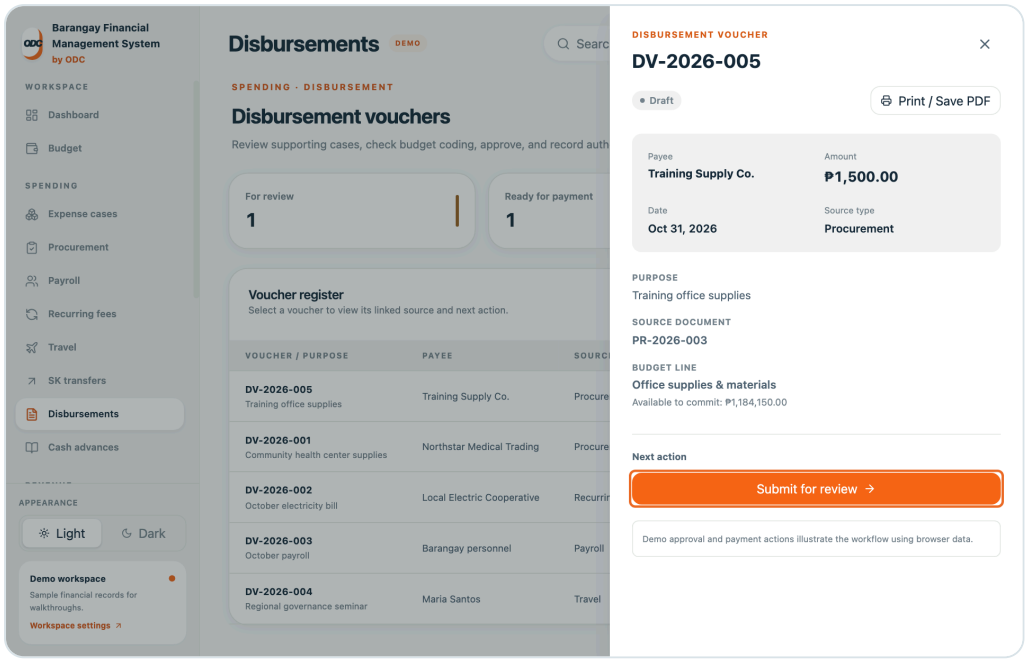

The handoff needs a reference and an owner

Use the same source-case, DV or receipt reference across checks. Give the next person the reference, evidence and result through your established process; the app does not send a workflow task automatically. Page checkboxes control viewing, while assigned roles control the supported financial actions.

Encoder — your six-step flow.

Follow the sequence, confirm your allowed actions, then pass the record to the next owner.

Receive request → check budget → check expense case → check draft DV → arrange submission → Approver

Actual shared application screen · Super admin demo capture. This is not a Encoder login capture; menus and buttons may differ with your account. Open the numbered step's screen link for a larger illustration.

What this role can do in the current live app

Current live access: view permitted budget, expense, voucher, advance and report pages. Creating cases, creating DVs and submitting vouchers still require a Super admin. The preparation and submission buttons pictured belong to the demo account.

1. **Receive and identify the request** Screen →

   Confirm the barangay, payee, purpose, amount and expense type before preparing the record.

2. **Check the budget line** Screen →

   Open Budget. Match the expense to its account code and check Available to commit; raise a shortfall to the Budget officer.

3. **Check the source expense case** Screen →

   Open Expense cases or its workflow. Search for an existing reference. Ask the Super admin to create any missing case; avoid duplicates.

4. **Prepare the linked draft DV** Screen →

   For procurement, wait for Ready for DV. Coordinate Create DV with the Super admin, then locate the draft in Disbursements.

5. **Verify and arrange submission** Screen →

   Select the voucher row. Compare the payee, amount, source reference and budget line. Ask the Super admin to Submit for review and confirm submitted status.

6. **Hand the reference to the Approver** Screen →

   Provide the DV and source references with the supporting records. If rejected, coordinate a corrected new case; this version has no return-and-resubmit action.

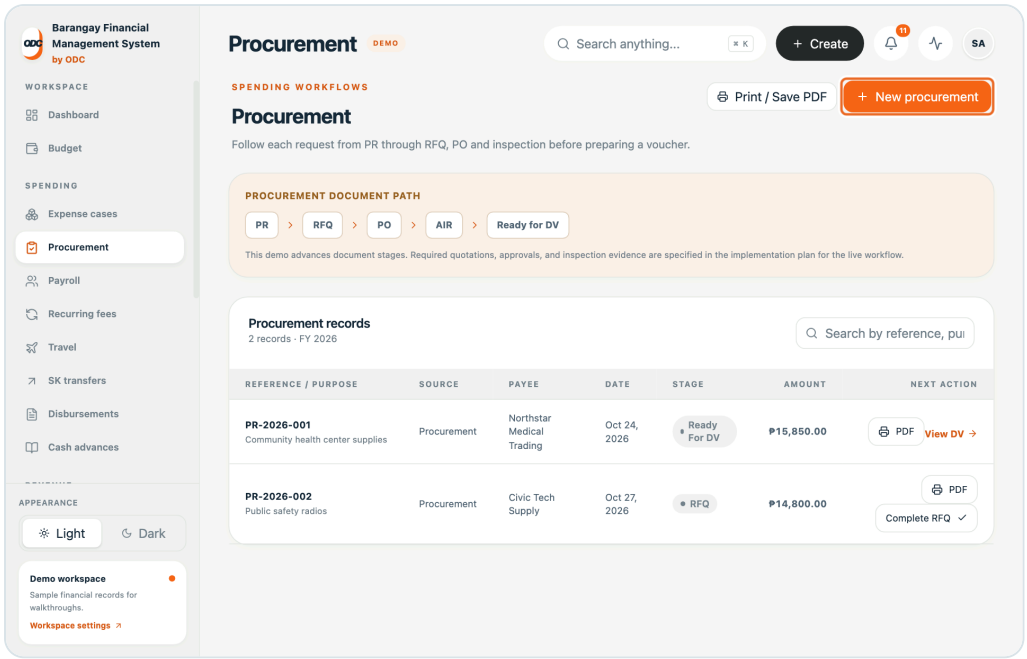

What to pass on, and to whom

Send: submitted DV number, source-case reference and supporting records. Next owner: assigned Approver. A handoff is coordination through your office's usual process; the app does not automatically route a task.

Procurement officer (PO) — your six-step flow.

Follow the sequence, confirm your allowed actions, then pass the record to the next owner.

Receive PR → RFQ → Purchase Order → AIR → Ready for DV → Encoder / Super admin

Actual shared application screen · Super admin demo capture. This is not a Procurement officer (PO) login capture; menus and buttons may differ with your account. Open the numbered step's screen link for a larger illustration.

What this role can do in the current live app

Current live access: view Procurement, Budget, Dashboard and Reports by default. Advancing stages and creating a DV still require a Super admin. PO in the role name means Procurement officer; PO in the document path means Purchase Order.

1. **Find the purchase request** Screen →

   Open Procurement. Search by PR reference, supplier/payee or purpose and check the amount and current stage.

2. **Check the budget and PR** Screen →

   Confirm the budget line and available balance. Coordinate completion of the PR with the authorized Super admin.

3. **Coordinate RFQ work** Screen →

   Arrange the quotation records and review work. The Super admin uses Complete RFQ after the stage is ready.

4. **Coordinate the Purchase Order** Screen →

   Check the agreed supplier and purchase details. Have the authorized user complete PO on the same case.

5. **Check delivery and AIR** Screen →

   Coordinate acceptance and inspection. Have the Super admin complete AIR, then verify Ready for DV.

6. **Hand off the ready case** Screen →

   Give the Encoder / Super admin the case reference and supporting records for Create DV. Procurement alone does not grant Disbursements access.

What to pass on, and to whom

Send: ready procurement case reference, supplier details and supporting purchase/inspection records. Next owner: Encoder for checking and Super admin for DV creation. Stage buttons track progress; they do not generate or replace official PR, RFQ, PO or AIR documents.

Budget officer and Approver: check and decide.

Start with your role below. Each dedicated page gives six numbered steps, an actual screen, live permissions and the next owner.

Encoder Procurement officer (PO) Budget officer Approver Treasurer Collector Auditor Administrator Super admin

Open Budget officer walkthrough →

Budget officer

1. Confirm the financial context
2. Find the budget line
3. Check available spending authority
4. Compare the voucher coding
5. Reconcile the report preview
6. Communicate the result

Current live access: view permitted budget, expense, voucher, advance and report pages. Adding a budget line or certifying a budget stage is not enabled for the Budget officer. Budget entry requires a Super admin.

Open Approver walkthrough →

Approver

1. Open the submitted queue
2. Open the voucher and inspect it
3. Compare the supporting records
4. Choose Approve or Reject
5. Review and confirm the decision
6. Verify status and hand off

Current live access: an assigned Approver can approve or reject submitted vouchers in that barangay when Disbursements is allowed. You cannot approve a voucher you created. Super admins have an audited self-approval exception. No payment authority is granted by Approver alone.

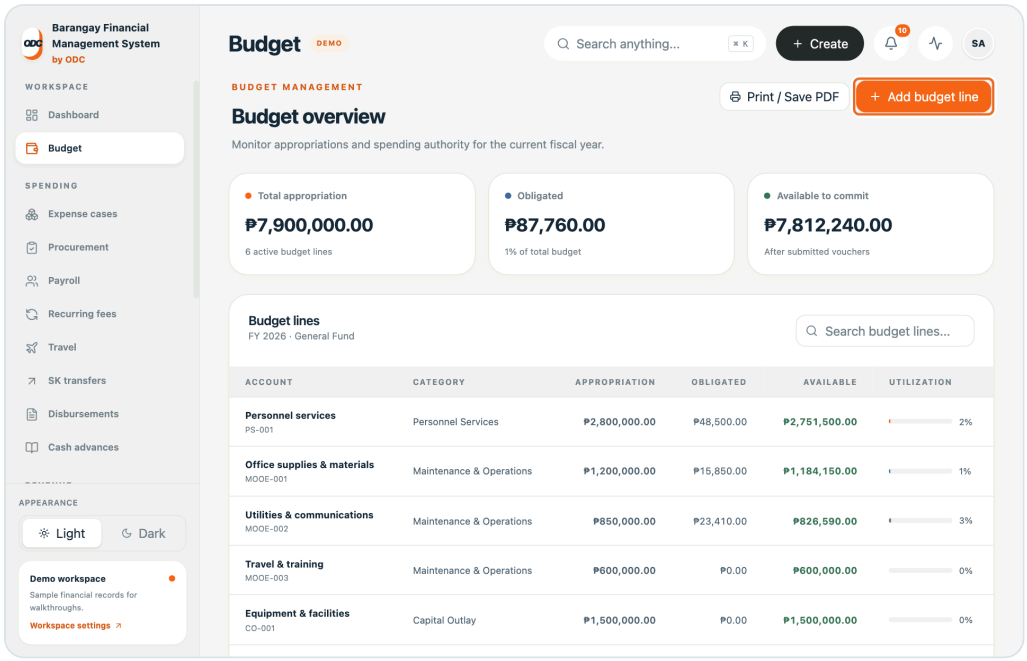

The handoff needs a reference and an owner

Use the same source-case, DV or receipt reference across checks. Give the next person the reference, evidence and result through your established process; the app does not send a workflow task automatically. Page checkboxes control viewing, while assigned roles control the supported financial actions.

Budget officer — your six-step flow.

Follow the sequence, confirm your allowed actions, then pass the record to the next owner.

Receive coding request → find line → check availability → compare DV → report finding → Encoder / Super admin

Actual shared application screen · Super admin demo capture. This is not a Budget officer login capture; menus and buttons may differ with your account. Open the numbered step's screen link for a larger illustration.

What this role can do in the current live app

Current live access: view permitted budget, expense, voucher, advance and report pages. Adding a budget line or certifying a budget stage is not enabled for the Budget officer. Budget entry requires a Super admin.

1. **Confirm the financial context** Screen →
   Check the barangay and fiscal year, then obtain the case or DV reference from the preparing user.
2. **Find the budget line** Screen →
   Open Budget and search the account code or name. Check the appropriation and category.
3. **Check available spending authority** Screen →
   Compare the requested amount with Available to commit. Submitted, approved and paid vouchers consume availability.
4. **Compare the voucher coding** Screen →
   Open Disbursements and select the voucher row. Match its budget line, amount, payee and source reference to the request.
5. **Reconcile the report preview** Screen →
   Open Reports → RAO or SAOB. Compare the visible figures with the budget and voucher registers.
6. **Communicate the result** Screen →
   Send the correct code and available balance, or the discrepancy, to the Encoder / Super admin. A new line must be entered by the Super admin.

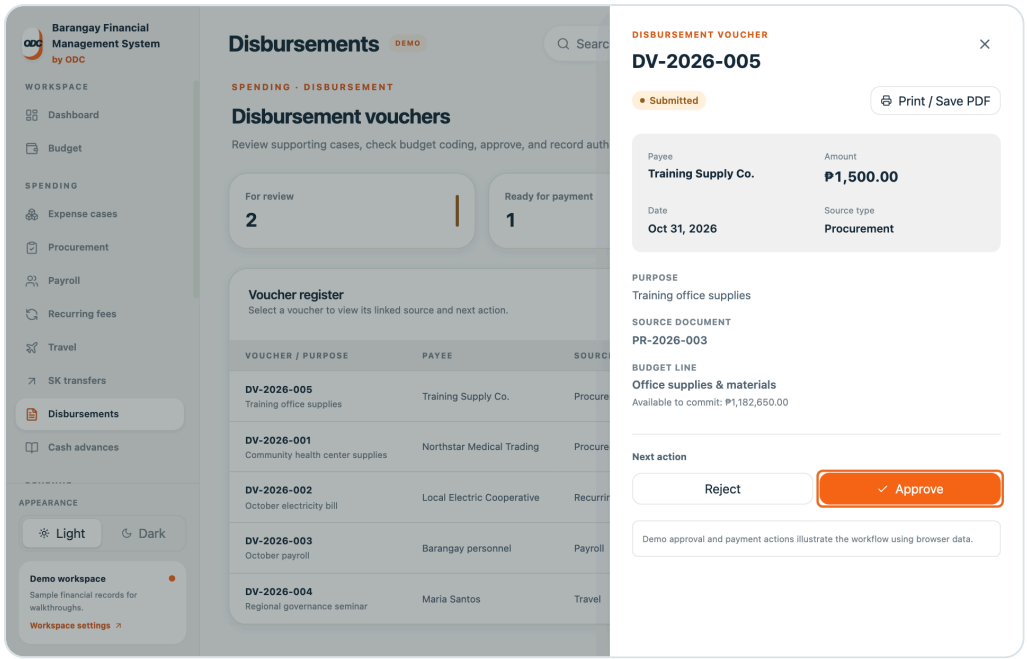

What to pass on, and to whom

Send: budget code, amount checked, available balance and any mismatch. Next owner: Encoder / Super admin before submission. The current app has no separate Budget officer certification button.

Approver — your six-step flow.

Follow the sequence, confirm your allowed actions, then pass the record to the next owner.

Submitted DV → select voucher → verify details / evidence → Approve or Reject → confirm → Treasurer or preparer

Actual shared application screen · Super admin demo capture. This is not a Approver login capture; menus and buttons may differ with your account. Open the numbered step's screen link for a larger illustration.

What this role can do in the current live app

Current live access: an assigned Approver can approve or reject submitted vouchers in that barangay when Disbursements is allowed. You cannot approve a voucher you created. Super admins have an audited self-approval exception. No payment authority is granted by Approver alone.

1 Open the submitted queue Screen →

Open Disbursements. Set the status filter to Submitted and locate the DV by reference or payee.

2 Open the voucher and inspect it Screen →

Check the payee, amount, purpose, source document and budget line in the voucher panel.

3 Compare the supporting records Screen →

Check the source case and required evidence through the established review process. Confirm this is a submitted voucher you may review independently.

4 Choose Approve or Reject Screen →

Approve a correct voucher; reject one that cannot proceed. The app does not provide Return with reason or editing/resubmission of a rejected DV.

5 Review and confirm the decision Screen →

Read the confirmation's voucher number, payee and amount. Confirm the intended action, then dismiss the completion message.

6 Verify status and hand off Screen →

For approval, confirm approved status and notify the Treasurer. For rejection, notify the preparing user with the DV reference and correction needed.

What to pass on, and to whom

Approved → send DV number and supporting records to Treasurer for actual payment. Rejected → send the reference and findings back to Encoder / Super admin for a corrected case. If an action fails, reread the current status/version before trying again.

Treasurer and Collector: payment and matching.

Start with your role below. Each dedicated page gives six numbered steps, an actual screen, live permissions and the next owner.

Encoder Procurement officer (PO) Budget officer Approver Treasurer Collector Auditor Administrator Super admin

Open Treasurer walkthrough →

Treasurer

1. Find the approved voucher
2. Check actual payment evidence
3. Record the payment reference
4. Verify paid status
5. Review advance accountability
6. Reconcile receipt matching

Current live access: an assigned Treasurer can record payment for an approved voucher in that barangay when Disbursements is allowed. Opening advances, liquidation entries, receipts and deposit/remittance matching still require a Super admin. Treasurer alone does not grant approval authority.

Open Collector walkthrough →

Collector

1. Identify the collection
2. Coordinate receipt recording
3. Verify the issued receipt
4. Check its unmatched balance
5. Prepare the treasury handoff
6. Follow up the matching result

Current live access: view Collections, Deposits & remittances, Dashboard and Reports by default. Issuing or voiding a receipt and confirming a matching batch still require a Super admin. Demo receipt buttons illustrate the authorized-user workflow.

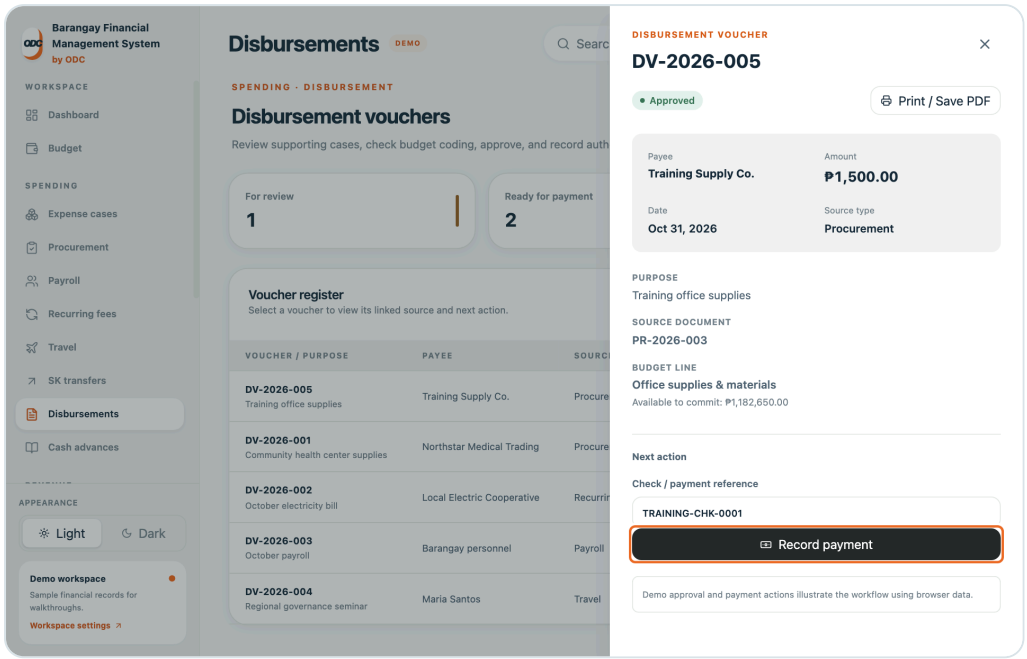

The handoff needs a reference and an owner

Use the same source-case, DV or receipt reference across checks. Give the next person the reference, evidence and result through your established process; the app does not send a workflow task automatically. Page checkboxes control viewing, while assigned roles control the supported financial actions.

Treasurer — your six-step flow.

Follow the sequence, confirm your allowed actions, then pass the record to the next owner.

Approved DV → verify actual payment → enter reference → confirm payment → reconcile → review advances / matching

Actual shared application screen · Super admin demo capture. This is not a Treasurer login capture; menus and buttons may differ with your account. Open the numbered step's screen link for a larger illustration.

What this role can do in the current live app

Current live access: an assigned Treasurer can record payment for an approved voucher in that barangay when Disbursements is allowed. Opening advances, liquidation entries, receipts and deposit/remittance matching still require a Super admin. Treasurer alone does not grant approval authority.

1. **Find the approved voucher** Screen →
   Open Disbursements → Approved. Select the voucher row and verify the DV number, payee, amount and supporting source.
2. **Check actual payment evidence** Screen →
   Confirm the payment has been issued and obtain the real check or transfer reference. The app records payment; it does not send money.
3. **Record the payment reference** Screen →
   Enter Check / payment reference and choose Record payment. Read and confirm the full amount and reference.
4. **Verify paid status** Screen →
   Confirm the paid status, recorded date and reference. Check the checks-issued / cashbook report previews as applicable.
5. **Review advance accountability** Screen →
   For a paid travel advance, review Cash advances. Coordinate opening, accepted expenses and refunds with the Super admin and accountable person.
6. **Reconcile receipt matching** Screen →
   Review Collections and Deposits & remittances. Give the Super admin the receipt allocations and bank/treasury evidence needed to confirm a batch.

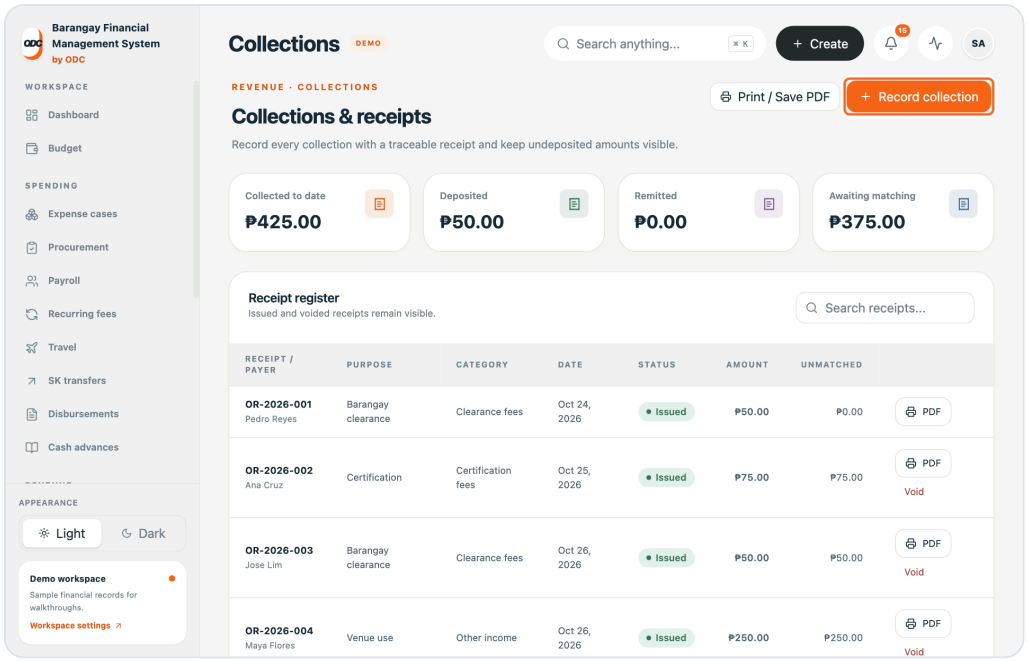

What to pass on, and to whom

Send: paid DV reference, payment evidence and any outstanding advance or matching items.
Next owner: accountable person / Super admin for settlement and Auditor for review. Deposit and remittance entries are separate from voucher payment.

Collector — your six-step flow.

Follow the sequence, confirm your allowed actions, then pass the record to the next owner.

Receive collection details → check receipt → verify amount → review unmatched → prepare evidence → Treasurer / Super admin

Actual shared application screen · Super admin demo capture. This is not a Collector login capture; menus and buttons may differ with your account. Open the numbered step's screen link for a larger illustration.

What this role can do in the current live app

Current live access: view Collections, Deposits & remittances, Dashboard and Reports by default. Issuing or voiding a receipt and confirming a matching batch still require a Super admin. Demo receipt buttons illustrate the authorized-user workflow.

1 Identify the collection Screen →

Confirm the barangay, payer, category, amount and particulars. Open Collections and check whether a receipt already exists.

2 Coordinate receipt recording Screen →

Give the Super admin the checked details for Record collection → Issue demo receipt. In live mode that action saves a live receipt record.

3 Verify the issued receipt Screen →

Check the generated receipt number, payer, amount and issued status in the register. Keep its reference with the supporting records.

4 Check its unmatched balance Screen →

Review Unmatched on the receipt. Recording a collection does not automatically allocate it to a deposit or remittance.

5 Prepare the treasury handoff Screen →

List the receipt numbers, amounts and intended allocations. Provide the actual bank deposit or treasury acknowledgment evidence when available.

6 Follow up the matching result Screen →

Review Deposits & remittances and the Matching / RCD / RCR previews. Ask the Treasurer / Super admin to resolve an unmatched balance or discrepancy.

What to pass on, and to whom

Send: receipt numbers, collection summary, intended allocations and treasury evidence. Next owner: Treasurer for checking and Super admin for matching. Official receipt stock and prescribed accountable-form controls are outside this screen's implemented workflow.

Auditor, Administrator and Super admin: oversight and access.

Start with your role below. Each dedicated page gives six numbered steps, an actual screen, live permissions and the next owner.

Encoder Procurement officer (PO) Budget officer Approver Treasurer Collector Auditor Administrator Super admin

Open Auditor walkthrough →

Auditor

1. Set the review context
2. Trace an expense to payment
3. Reconcile an advance
4. Trace the receipt allocation
5. Inspect the audit trail
6. Document and send findings

Current live access: view all financial pages and Audit trail by default, subject to account page choices. Auditor cannot change transactions, approve vouchers or record payments solely through this role. The visible audit list contains the latest loaded events, not a complete archive.

Open Administrator walkthrough →

Administrator

1. Confirm the administered barangay
2. Search before adding
3. Assign the staff role
4. Choose the allowed pages
5. Save and verify access
6. Oversee staff and work handoffs

Current live access: manage non-administrator staff in administered barangays and view permitted financial pages. Only a Super admin can add/change Administrator roles or White label. Financial authority requires its own assigned role; Administrator alone does not grant it.

Open Super admin walkthrough →

Super admin

1. Onboard and identify the barangay
2. Set branding and sign-in details
3. Assign the Administrator and staff
4. Prepare the financial records
5. Support approval and payment
6. Complete treasury work and review

Current live access: all pages and all supported financial actions across barangays, independent of barangay memberships or custom page restrictions. Own-voucher approval is allowed as an audited exception. Transaction state, amount, budget and duplicate-posting checks still apply.

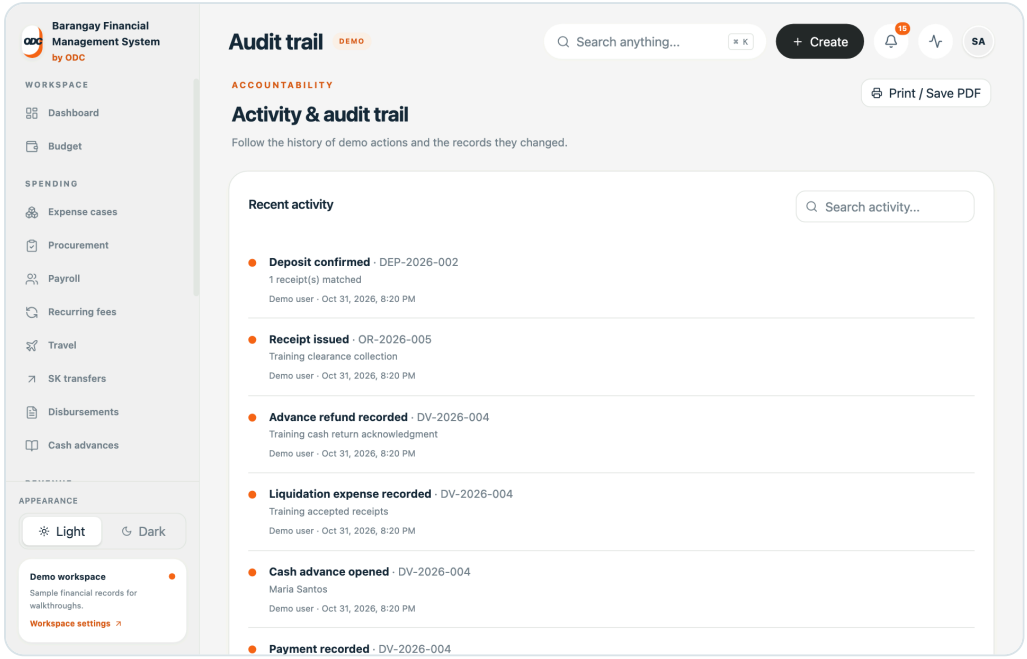

The handoff needs a reference and an owner

Use the same source-case, DV or receipt reference across checks. Give the next person the reference, evidence and result through your established process; the app does not send a workflow task automatically. Page checkboxes control viewing, while assigned roles control the supported financial actions.

Auditor — your six-step flow.

Follow the sequence, confirm your allowed actions, then pass the record to the next owner.

Confirm scope → trace spending → trace advances → trace collections → inspect audit events → report findings

Actual shared application screen · Super admin demo capture. This is not a Auditor login capture; menus and buttons may differ with your account. Open the numbered step's screen link for a larger illustration.

What this role can do in the current live app

Current live access: view all financial pages and Audit trail by default, subject to account page choices. Auditor cannot change transactions, approve vouchers or record payments solely through this role. The visible audit list contains the latest loaded events, not a complete archive.

1 Set the review context Screen →

Confirm the barangay, fiscal year and the records available through your page access before comparing totals.

2 Trace an expense to payment Screen →

Compare source case → linked DV → approval state → payment reference. Match the amount and payee across records.

3 Reconcile an advance Screen →

Compare the paid travel DV with accepted expenses, refunds and outstanding balance. Do not count liquidation as a second payment.

4 Trace the receipt allocation Screen →

Compare issued/voided receipts with deposit/remittance allocations. Check that matched plus unmatched equals the valid receipt amount.

5 Inspect the audit trail Screen →

Search action, subject or details and compare actor/time with the financial record. Super admin self-approvals carry an audit exception.

6 Document and send findings Screen →

Use report CSV or Print / Save PDF and include record references in follow-up. Ask the responsible owner to investigate any discrepancy.

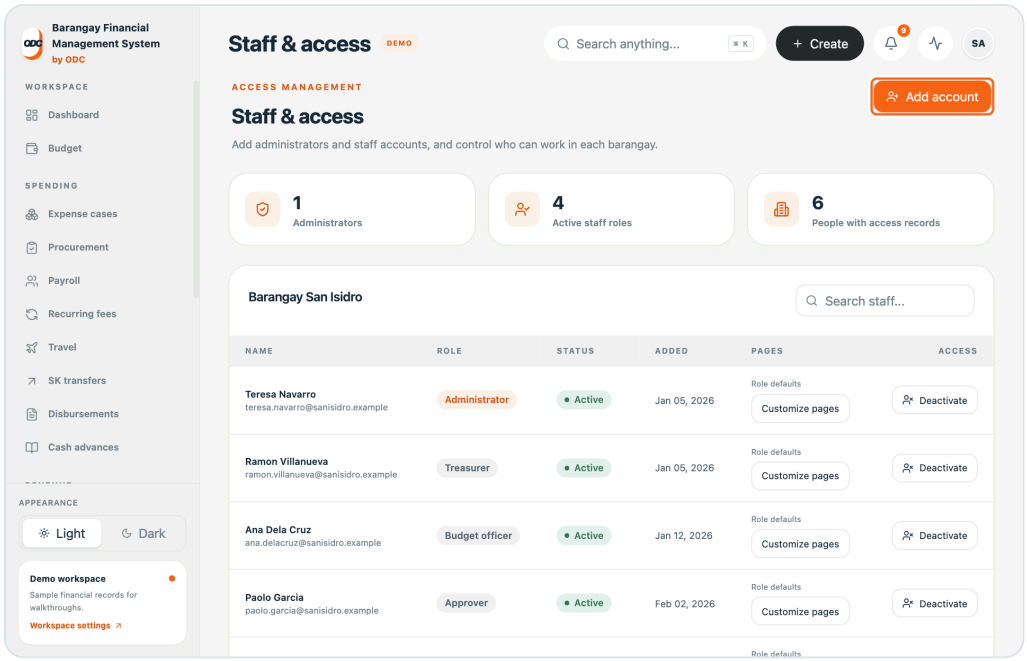

What to pass on, and to whom

Send: affected record references, compared totals and findings. Next owner: responsible finance user / Administrator / Super admin. A review does not lock a period; formal closing and archived snapshots are not implemented in this interface.

Administrator — your six-step flow.

Follow the sequence, confirm your allowed actions, then pass the record to the next owner.

Confirm barangay → find person → assign staff role → choose pages → confirm access → oversee handoffs

Actual shared application screen · Super admin demo capture. This is not a Administrator login capture; menus and buttons may differ with your account. Open the numbered step's screen link for a larger illustration.

What this role can do in the current live app

Current live access: manage non-administrator staff in administered barangays and view permitted financial pages. Only a Super admin can add/change Administrator roles or White label. Financial authority requires its own assigned role; Administrator alone does not grant it.

1 Confirm the administered barangay Screen →

Open Staff & access and verify the barangay selector before adding or changing a person's access.

2 Search before adding Screen →

Find the person by name or email. Choose Add staff for a new membership; use the existing account where appropriate.

3 Assign the staff role Screen →

Enter the person's details, select Encoder, Procurement, Budget, Approver, Treasurer, Collector or Auditor, and set a temporary password for a new live account.

4 Choose the allowed pages Screen →

Review the role defaults and check/uncheck pages. A custom selection replaces the account's combined role defaults in this barangay.

5 Save and verify access Screen →

Choose Add to [barangay], review the confirmation and confirm Add account. Verify role and active status; use Customize pages for later changes.

6 Oversee staff and work handoffs Screen →

Review active access and daily outstanding work. Deactivate access when appropriate; refer administrator-role changes or financial corrections to the Super admin.

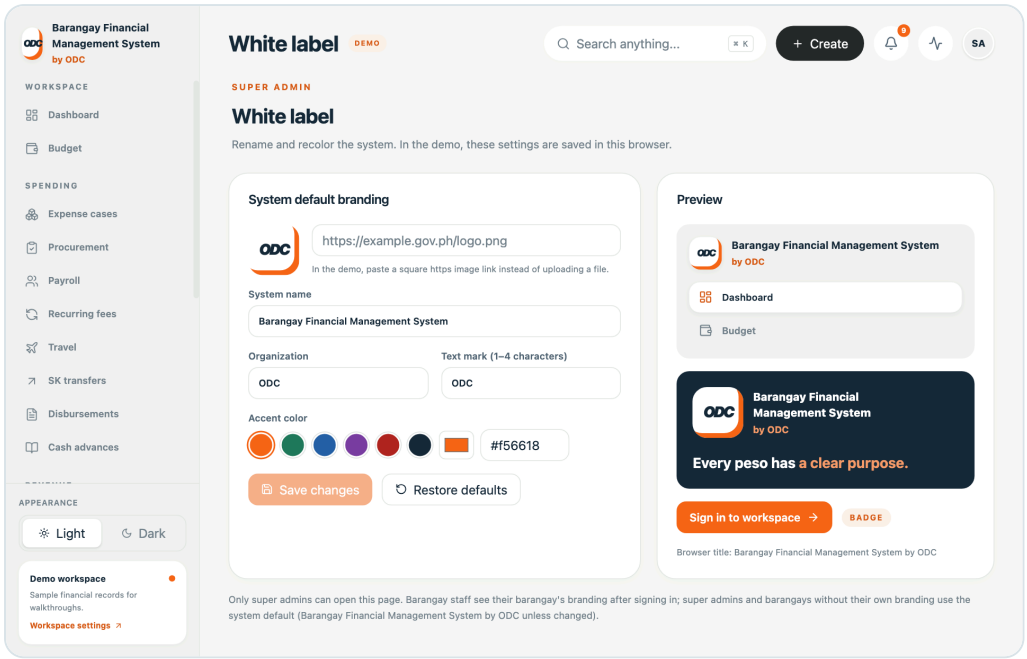

What to pass on, and to whom

Send each user their barangay sign-in link and assigned responsibilities through your established process. Share temporary passwords privately. Next owners: assigned staff; request Super admin help for Administrator access and system setup.

Super admin — your six-step flow.

Follow the sequence, confirm your allowed actions, then pass the record to the next owner.

Onboard barangay → set branding → assign Administrator → prepare records → support approval / payment → review audit

Actual shared application screen · Super admin demo capture. This is not a Super admin login capture; menus and buttons may differ with your account. Open the numbered step's screen link for a larger illustration.

What this role can do in the current live app

Current live access: all pages and all supported financial actions across barangays, independent of barangay memberships or custom page restrictions. Own-voucher approval is allowed as an audited exception. Transaction state, amount, budget and duplicate-posting checks still apply.

1. **Onboard and identify the barangay** Screen →

   In live White label, use Onboard barangay, choose its name and sign-in slug, then verify the saved scope. The screenshot shows the demo system editor.

2. **Set branding and sign-in details** Screen →

   Choose the barangay's branding scope, set its name/logo/color, review the preview and save. Give the correct sign-in link to its Administrator.

3. **Assign the Administrator and staff** Screen →

   Open Staff & access for the correct barangay. Add its Administrator and staff roles and check their allowed pages.

4. **Prepare the financial records** Screen →

   Add needed budget lines, create source cases, complete procurement stages where applicable, create the linked DV and submit it for review.

5. **Support approval and payment** Screen →

   Use independent Approver and Treasurer handoffs where assigned. A Super admin can also complete the supported sequence directly; verify confirmations and references.

6. **Complete treasury work and review** Screen →

   Record authorized collections, matching and advance settlements as needed. Review Reports and Audit trail for the selected barangay.

What to pass on, and to whom

Send: configured barangay, sign-in link and Administrator access. Operational handoffs then follow the assigned roles. For support/testing with one account, retain record references and review the audit entries, especially self-approval overrides.

Resolve the problem at the step where it appears.

Use the exact error or record reference when coordinating with the administrator.

What you see	What it means	Next step
Membership pending	Signed in without active access	Administrator assigns/reactivates membership; sign in again.
Read-only / recording not enabled	Your account lacks authority for this action	Check the role, barangay and allowed page. Route approval to Approver, payment to Treasurer, and other posting to Super admin.
Empty page or partial totals	No visible records, role restriction or loading problem	Check barangay, membership and any load-error banner before assuming no activity.
Insufficient appropriation	Submitting would exceed the selected budget	Check coding and current commitments with the Budget officer; resolve through authorized budget action.
Approval is not authorized	Permission is missing; ordinary self-approval is blocked	Confirm the assigned Approver role and barangay. Use an independent approver for a voucher you created; Super admin support exceptions are audited.
Voucher state or version changed	Another action changed this voucher	Refresh, reopen it, and check its latest status before acting.
Receipt linked to a deposit cannot be voided	An allocation already exists	Retain the record and escalate the correction; no allocation reversal UI is provided.
Liquidation exceeds remaining balance	Expense + refunds would exceed the advance	Correct the amount. Any excess claim needs a separately authorized process.
Cash advance list is empty	No eligible data, permission limit or migration absent	Check paid travel vouchers, your role, and installation of the cash-advance migration.
Server could not be reached	Save outcome may be uncertain	Refresh and check the register before retrying, to avoid creating another transaction.

After a posted-record mistake

The app does not provide general financial editing, deletion, payment reversal or deposit reversal screens. Preserve the reference and coordinate an authorized correction with the system and finance administrators. Do not enter an offsetting receipt/payment just to hide the error.

Use this guide with the version you actually run.

Reviewed on 31 October 2026 · Based on the local checked-out repository, including current uncommitted screen changes.

CURRENT

Covered in the current source

Sign-in, account password change, barangay onboarding/branding, staff roles and custom pages, basic budget lines, five expense routes, procurement stages, linked vouchers, review/approval/payment, travel advances, liquidation entries, receipts, partial matching, report previews and audit viewing.

PLANNED

Planned operational controls

Full quotation/AIR evidence, payroll deductions, recurring schedules, travel forms, detailed SK authorization, attachments, multi-step certification/return, budget versions/adjustments, separate formal obligations, liquidation review/due dates, accountable forms, period close and finalized report templates.

Deployment check

Page access requires **202611030001_account_page_access.sql**; full Super admin flow testing requires **202611040001_superadmin_workflow_access.sql**. Apply migrations in order. This handbook does not confirm live installation.

Where the access rules come from
